Plant Tissue Culture: Propagation, Conservation and Crop Improvement Mohammad Anis,Naseem Ahmad,2016-10-08 This book presents basic concepts, methodologies and applications of biotechnology for the conservation and propagation of aromatic, medicinal and other economic plants. It caters to the needs and challenges of researchers in plant biology, biotechnology, the medical sciences, pharmaceutical biotechnology and pharmacology areas by providing an accessible and cost-effective practical approach to micro-propagation and conservation strategies for plant species. It also includes illustrations describing a complete documentation of the results and research into particular plant species conducted by the authors over the past 5 years. Plant Biotechnology has been a subject of academic interest for a considerable time. In recent years, it has also become a useful tool in agriculture and medicine, as well as a popular area of biological research. Current economic growth is globally projected in a highly positive manner, but the challenges many countries face with regard to food, feed, malnutrition, infectious diseases, the newly identified life-style diseases, and energy shortages, all of which are worsened by an ever-deteriorating environment, continue to pull the growth digits back. The common thread that connects all of the above challenges is biotechnology, which could provide many answers. Molecular biology and biotechnology have now become an integral part of tissue culture research. The

tremendous impact generated by genetic engineering and consequently of transgenics now allows us to manipulate plant genomes at will. There has indeed been a rapid development in this area with major successes in both developed and developing countries. The book introduces several new and exciting areas to researchers who are unfamiliar with plant biotechnology and also serves as a review of ongoing research and future directions for scholars. The book highlights numerous methods for in vitro propagation and utilization of techniques in raising transgenics to help readers reproduce the experiments discussed.

Oxidation of Tungsten Vincent David Barth,G. W. P. Rengstorff,1961 The report presents a detailed review of available information on the oxidation of W and its alloys. W is relatively inert below 700 C. As the temperature is increased above this level, however, oxidation becomes progressively more rapid, reaching catastrophic rates at temperatures around 1200 C and above. Various theories for the mechanism and rates of W oxidation at different temperatures are reviewed, and the effect of pressure and water vapor on the stability of W oxides is discussed in detail. The elevated temperature reactions of W with other materials, such as refractory oxides, and with gases other than oxygen also are covered. Information on the protection of W by alloying and coating is included. (Author).

Sissy Dreams: From Boyfriend to Girlfriend Paul Zante, Receiving a text from Sasha, my girlfriend, at work was always risky. Especially when she wanted to know if her girlfriend was horny. A short and sweet (and filthy) story.

Rose Suzanne Wilson, 2021-10-27 A privileged chance to see Rose Uniacke's work in the form of a private tour of her London home-the crucible for all her design ideas-in her first book, produced as a limited edition of 2,500 copies. Airy and light, delicate and robust, grand and intimate, raw and luxurious: these are just some of the qualities and contradictions that resonate within the work and home of Rose Uniacke. This sumptuous volume, the first on the designer, has been conceived with Uniacke to her bespoke specifications. Masterfully photographed by François Halard, the book unfolds gatefold after gatefold as a series of privileged glimpses inside Uniacke's home, with the designer's own words as our guide-an intimate and exclusive portrait of a home rarely gained access to as well as a window onto the workings of one of our leading design minds. Her work is distinguished by warmth, character, and an extraordinary serenity, and mirroring these qualities the book is a luxury object made from some of the same materials featured in Uniacke's home: a unique cotton duck canvas slipcase houses the book itself, which is wrapped in pure new wool. Completing this indispensable book in design history are texts from the architect of Uniacke's home, Vincent Van Duysen, and her landscape architect, Tom Stuart-Smith.
