The Dams of Western San Diego County John Martin,2017-10-30 The unreliability of the San Diego River compelled the Franciscan fathers to construct the area's first dam in 1813 to conserve drinking and irrigation water for the Mission San Diego de Alcalá. This water-driven circumstance continued and expanded in the ensuing American era. Lacking a reliable water source at the turn of the 20th century, San Diego County was destined to experience modest growth. The region's semiarid conditions, cyclical droughts, and existing river systems determined that the only effective way to maintain a ready water supply was to conserve runoff and river floodwaters behind dam-created reservoirs. Between 1888 and 1934, private and municipal interests constructed a series of massive structures that made San Diego County the dam-building center of the world. The county featured some of America's first multiple arch dams and earliest hydraulic fill dams. Into the mid-1940s, dammed reservoirs remained the principle water source for county consumers and made the municipal expansion of the city of San Diego possible.

Dam Busters James Holland,2013-11-04 The story of the British-made bombs, Upkeep and Highball, successfully dropped on Nazi dams “has never been told in such depth before” (Daily Mail, UK). The night of May 16, 1943: Nineteen specially adapted Lancaster bombers take off from an RAF airfield in Lincolnshire, England, each with a huge nine-thousand-pound cylindrical bomb strapped underneath it. Their mission: to destroy three hydroelectric dams that power the Third Reich’s war machine. It was a suicide mission from the outset. First the men had to fly extremely low, at night, and in tight formation over miles of enemy-occupied territory. Then they had to drop with pinpoint precision a complicated spinning cylindrical bomb that had never before been used operationally. More than that, the entire operation had to be put together in less than ten weeks in order to hit the dams when water levels were still high enough for the bombs to be effective. The visionary aviation engineer Barnes Wallis hadn’t even drawn up plans for his concept when the bouncing bomb was green-lighted. What followed was an incredible race against time that, despite numerous setbacks, became one of the most successful and significant bombing raids of all time. “Holland has delved into the new trove” of declassified documents “to shed light on this weapons program, the politics of its development and the eventual mission” (The Wall Street Journal). “An impeccably researched work in the style of a fast-paced techno-thriller.” –Publishers Weekly “Extremely detailed but never dull . . . Holland offers a definitive, nuts-and-bolts history.” –Kirkus Reviews “A well-written study of engineering and invention operating under great pressure. . . . For all World War II history buffs.” –Library Journal, starred review

Dams and Reservoirs under Changing Challenges Anton J. Schleiss,Robert M. Boes,2011-05-18 In the past, boundary conditions in the building of dams have changed, as technological developments have been influential on dam planning, construction, operation and maintenance processes. It is ICOLD's mission to not only consider these developments but also adequately deal with environmental aspects and related infrastructure issues. Altered wa

Espíritu Santo de Zúñiga Tamra Lynn Walter,2010-01-01 San Antonio Conservation Society Citation, 2009 In the early part of the eighteenth century, the Spanish colonial mission Espíritu Santo de Zúñiga was relocated from far south Texas to a site along the Guadalupe River in Mission Valley, Victoria County. This mission, along with a handful of others in south Texas, was established by the Spaniards in an effort to Christianize and civilize the local Native American tribes in the hopes that they would become loyal Spanish citizens who would protect this new frontier from foreign incursions. With written historical records scarce for Espíritu Santo, Tamra Walter relies heavily on material culture recovered at this site through a series of recent archaeological investigations to present a compelling portrait of the

Franciscan mission system. By examining findings from the entire mission site, including the compound, irrigation system, quarry, and kiln, she focuses on questions that are rarely, if ever, answered through historical records alone: What was daily life at the mission like? What effect did the mission routine have on the traditional lifeways of the mission Indians? How were both the Indians and the colonizers changed by their frontier experiences, and what does this say about the missionization process? Walter goes beyond simple descriptions of artifacts and mission architecture to address the role these elements played in the lives of the mission residents, demonstrating how archaeology is able to address issues that are not typically addressed by historians. In doing so, she presents an accurate portrait of life in South Texas at this time. This study of Mission Espíritu Santo will serve as a model for research at similar early colonial sites in Texas and elsewhere.

Sustainable and Safe Dams Around the World / Un monde de barrages durables et sécuritaires Jean-Pierre Tournier,Tony Bennett,Johanne Bibeau,2019-08-08 These proceedings include digital media with the full conference papers (3600+ pages). Sustainable and Safe Dams Around the World contains the contributions presented at the 2019 Symposium of the International Commission on Large Dams (ICOLD 2019, Ottawa, Canada, 9-14 June 2019). The main topics of the book include: 1. Innovation (recent advancements and techniques for investigations, design, construction, operation and maintenance of water or tailings dams and spillways) 2. Sustainable Development (planning, design, construction, operation, decommissioning and closure management strategies for water resources or tailings dams, e.g. climate change, sedimentation, environmental protection, risk management). 3. Hazards (design mitigation and management of hazards to water or tailings dams, appurtenant structures, spillways and reservoirs (e.g. floods, seismic, landslides). 4. Extreme Conditions (management for water or tailings dams (e.g. permafrost and ice loading, arid/wet climates, geo-hazards). 5. Tailings (design, construction, operation and closure for tailings dams; recent advancements and best practice) Sustainable and Safe Dams Around the World will be invaluable to academics and professionals interested or involved in dams. Un monde de barrages durables et sécuritaires contiennent les contributions présentées lors du symposium de 2019 de la Commission internationale des grands barrages (CIGB 2019, Ottawa, Canada, 9-14 juin 2019). Les principaux sujets du livre incluent: 1. Innovation (Avancées et techniques récentes pour l'investigation, la conception, la construction, l'exploitation et l'entretien de barrages hydrauliques, de barrages de stériles et d'évacuateurs de crues) 2. Développement durable (stratégies de gestion pour la planification, la conception, la construction, l'exploitation, la mise hors service et la fermeture de barrages hydrauliques ou des barrages de stériles, par exemple, changement climatique, sédimentation, protection de l'environnement, gestion des risques). 3. Risques (mesures d'atténuation et gestion des risques liés aux barrages hydrauliques et barrages de stériles, aux ouvrages annexes, aux évacuateurs de crues et aux réservoirs, par exemple, inondations, tremblements de terre, glissements de terrain). 4. Environnement extrême (gestion des barrages hydrauliques et barrages de stériles, par exemple, pergélisol et charge de glace, climats secs / humides, géorisques). 5. Barrages de stériles (conception, construction, exploitation

et fermeture des barrages de stériles; avancées récentes et meilleures pratiques). Un monde de barrages durables et sécuritaires seront d'une valeur inestimable pour les universitaires et les professionnels intéressés ou impliqués dans les barrages.

Jackson, Martin V. Melosi, 2005-10 Explores the story of Federal contributions to dam planning, design, and construction.

Large Dams in Asia Marcus Nüsser, 2013-11-18 This book explores the multi-dimensional asymmetries of scale, time, and directions in the large dam controversy with a regional focus on Asia, especially on India and China. Whereas the concept of large-scale transformation of fluvial environments into technological hydrosapes originated in the West, widespread construction of large dams started in the countries of the Global South in the period after decolonisation. Construction and operation of large dams are amongst the most prestigious but also most sensitive development issues, often accompanied by massive resistance of adversely affected people and civil society organisations. Based on the notion of a contested politicised environment, various case studies are analysed to identify the dominant narratives and imaginations that shape the large dams debate. This volume largely contains contributions related to several subprojects from within the Cluster of Excellence 'Asia and Europe in a Global Context: Shifting Asymmetries in Cultural Flows', based at Heidelberg University, with several expert contributions from external researchers.
