JavaScript & DHTML Cookbook Danny Goodman,2003-04-21 On numerous online forums for JavaScript and DHTML, the majority of questions begin with How do I...? This new Cookbook provides the answers. After reading thousands of forum threads over the years, author and scripting pioneer Danny Goodman has compiled a list of problems that frequently vex scripters of various experience levels. He has now applied state-of-the-art ECMA and W3C DOM standards and used best practices to create this extensive collection of practical recipes that can bring your web pages to life. The JavaScript & DHTML Cookbook is all about adding value to the content of a web page. The book focuses on practical and sensible applications of scripting, rather than flying images and gratuitous color changes. For every problem Goodman addresses, there's a solution or recipe--a focused piece of code that web developers can insert directly into their applications. Yet, rather than just cut-and-paste code, you also get explanations of how and why the code works, so you can learn to adapt the problem-solving techniques to your designs. The recipes range from simple tasks, such as manipulating strings and validating dates in JavaScript, to entire libraries that demonstrate complex tasks, such as cross-browser positioning of HTML elements and sorting tables. This book contains over 150 recipes on the following topics: Working with interactive forms and style sheets Presenting user-friendly page navigation Creating dynamic content Producing visual effects for stationary content Positioning HTML elements Managing browser windows and multiple frames This book is the ideal companion to O'Reilly's JavaScript: The Definitive Guide and Dynamic HTML: The Definitive Reference. If you own either of these books, the JavaScript & DHTML Cookbook is a must.

*Innovations for Requirement Analysis. From Stakeholders' Needs to Formal Designs* Barbara Paech, Craig Martell, 2008-11-27

We are pleased to present the proceedings of the 14th Monterey Workshop, which took place September 10–13, 2007 in Monterey, CA, USA. In this preface, we give the reader an overview of what took place at the workshop and introduce the contributions in this Lecture Notes in Computer Science volume. A complete introduction to the theme of the workshop, as well as to the history of the Monterey Workshop series, can be found in Luqi and Kordon's "Advances in Requirements Engineering: Bridging the Gap between Stakeholders' Needs and Formal Designs" in this volume. This paper also contains the case study that many participants used as a problem to frame their analyses, and a summary of the workshop's results. The workshop consisted of three keynote talks, three panels, presentations of peer-reviewed papers, as well as presentations of various position papers by the participants. The keynote speakers at this year's workshop were Daniel Berry, Aravind Joshi, and Lori Clarke. Each of their talks was used to set the tone for the presentations and discussions for that particular day. Daniel Berry presented an overview of the needs and challenges of natural language processing in requirements engineering, with a special focus on ambiguity in his talk "Ambiguity in Natural Language Requirements." Aravind Joshi provided an overview of current natural language processing research in discourse analysis in the talk "Some Recent Developments in Natural Language Processing." Finally, Lori Clarke showed how to combine formal requirements specification with natural language processing to cope with the complex domain of medical information processes in

**Programming in Pascal, with an Early Introduction to Procedures** Nell B. Dale,1990

**Intention-based Diagnosis of Novice Programming Errors** W. Lewis Johnson,1986 Accurate identification and explication of program bugs requires an understanding of the programmer's intentions. Otherwise it is not possible to determine exactly what part of the program is erroneous, and how best to correct it. Understanding the programmer's intentions is doubly necessary if the programmer is a novice, and the diagnostician is a teacher who is trying to find out why the student is having difficulties. Intention-based error diagnosis has been implemented in a program called PROUST, which identifies non-syntactic bugs in programs written by novice Pascal programmers. Empirical studies of PROUST's performance show that it achieves high performance in finding bugs in non-trivial student programs. This book is intended for people interested in the application of artificial-intelligence techniques to computer-aided instruction, and to automatic program analysis, debugging, and synthesis.
