Research and Practical Issues of Enterprise Information Systems A. Min Tjoa,Li Xu,Sohail Chaudhry,2007-11-14 The idea for this conference came from a meeting of the IFIP (International Federation for Information Processing) Technical Committee for Information Systems (TC8) in Guimares, Portugal in June 2005. Our goal is to build an IFIP forum among the different Information Systems Communities of TC8 dealing with the increasing important area of Enterprise Information Systems. In this particular meeting the committee members intensively discussed the innovative and unique characteristics of Enterprise Information Systems as scientific sub-discipline. Hence, in this meeting it was decided by the TC8 members that the IFIP TC8 First International Conference on Research and Practical Issues of Enterprise Information Systems (CONFENIS 2006) would be held in April 2006 in Vienna, Austria. Dr. Li Xu (USA) and Dr. A Min Tjoa (IFIP TC8) were assigned to propose a concept for this conference in order to establish an IFIP platform for EIS researchers and practitioners in the field to share experience, and discussing opportunities and challenges. We are very pleased therefore to have this conference organised by the help of the Austrian Computer Society (OCG). OCG supports the idea of this conference due to the urgent need of research and dissemination of new techniques in this key area. We received 180 papers from more than 30 countries for CONFENIS and the Program Committee eventually selected xx papers or extended abstracts, making an acceptance rate of xx% of submitted papers. Each paper was thoroughly reviewed by at least two qualified reviewers.

Frontiers in Enterprise Integration Li D. Xu,2020-10-28 Enterprise Information Systems (EIS) integrate and support business processes across functional boundaries in a supply chain environment, and have become increasingly popular over the last 15 years. In recent years, more and more enterprises world-wide have adopted EIS such as Enterprise Resource Planning (ERP) for running their businesses. Previously, information systems such as CAD, CAM, MRPII and CRM were widely used for partial functional integration within a business organization. With global operation, global supply chain, and fierce competition in place, there is a need for suitable EIS such as ERP, E-Business or E-Commerce systems to integrate extended enterprises in a supply chain environment with the objective of achieving efficiency, competency, and competitiveness. As a result, there is a growing demand for researching EIS to provide insights into challenges, issues, and solutions related to the design, implementation and management of EIS. The papers in Advances in Enterprise Information Systems were selected from two premier international conferences: the International Forum of Information Systems Frontiers—Xian International Symposium (IFISF), June 29-30, 2006, Xian, China and the IFIP TC 8.9 International Conference on Research and Practical Issues of Enterprise Information Systems (Confenis 2007), October 14-16, Beijing, China. Both events provided an excellent opportunity for EIS academicians and practitioners in the world to gather and exchange ideas, and present original research in their fields. Advances in Enterprise Information Systems will be invaluable to scientists, researchers and professionals in EIS.

Approaches to Handling Environmental Problems in the Mining and Metallurgical Regions Walter Leal Filho,Irina Butorina,2003-09-30 This book is one of the outcomes of the NATO Advanced Research Workshop "Approaches to handling environmental problems in the mining and metallurgical regions of NIS countries" held in Mariupol, Ukraine on 5-7 September 2002. It include papers written by some of the leading specialists in the field of mining and metallurgy, and by environment specialists who are active in this sector. Readers will notice that some common environmental problems seen in the mining and metallurgical industries are described and that their influence on the health of the population are discussed. Examples of best practice in the field are given both from EU countries and from Central and Eastern European nations, especially from the Newly Independent States (NIS). Some of the latest technologies involved in the elimination of hazardous emissions, in sewage treatment and the handling of wastes in the metallurgical and mining industries are presented and we hope that they may open the way for more West-East, East-West and East-East technology and know-how exchange. In preparing this book, thanks are due to Marina Butorina, Linda Döring and Olaf Gramkow for their competent advice in respect of translations, lay-out and handling of the texts. We also grateful to NATO´s Scientific Affairs Division for the support with the workshop, whose

benefits are already being felt in both Mariupol and elsewhere in Eastern Europe.

SAP Hardware Solutions Michael Missbach,Uwe M. Hoffmann,2001 The goal of this text is to describe the technical design aspects of the IT infrastructure; it does not give the details of installing and customizing SAP software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR

Service-oriented Software System Engineering Zoran Stojanovi?,Ajantha Dahanayake,2005-01-01 Current IT developments like component-based development and Web services have emerged as effective ways of building complex enterprise-scale information systems and providing enterprise application integration. To aid this process, platforms such as .NET and WebSphere have become standards in web-based systems development. However, there are still a lot of issues that need to be addressed before service-oriented software engineering (SOSE) becomes a prominent and widely accepted paradigm for enterprise information systems development and integration. This book provides a comprehensive view of SOSE through a number of different perspectives. Some of those perspectives include: service-based concepts, modeling and documentation, service discovery and composition, service-oriented architecture, model-driven development of service-oriented applications, service security and service-orientation in mobile settings. The book provides readers with an in-depth knowledge of the main challenges and practices in the exciting, new world of service-oriented software engineering. Addressing both technical and organizational aspects of this new field, it offers a balance making it valuable to a variety of readers, including IT architects, developers, managers, and analysts.

Forms of Enterprise in 20th Century Italy Andrea Colli,Michelangelo Vasta,2010-01-01 This book provides a wide-ranging analysis of change in size and nature of Italian firms, and thus a unique and fascinating perspective on the evolution of one of the major industrial economies of the 20th century. An example of business history as it ought to be done. Giovanni Federico, European University Institute, Italy This book is necessary reading for a real understanding of the evolution of Italian capitalism during the last century. It moves away from a simplified view of the Italian industrial structure as just composed by small enterprises and successfully sheds light on the variety of different forms of enterprises the

compose Italian system. The lively picture that emerges from this book is the one of richer types of enterprises, which have evolved over time and have contributed in different ways to Italian economic growth. Franco Malerba, Bocconi University, Italy Taking an historical perspective, this unique book highlights the evolution of the many diverse forms of business enterprise, and discusses the contribution of these different types of firm to the economic growth of Italy. One important issue that has recently captured the attention and the research efforts of both economists and economic historians has been the debate on varieties of capitalism in the modern world. In this context, the expert contributors analyze the various stages of Italian development that have been characterized by diverse dominating forms of enterprise which, in turn, have adapted to the nature of technological and market opportunities at the institutional, national and international level. This book proposes a new interpretation of the Italian case that utilizes both the structural and macroeconomic perspective of comparative history, as well as the microeconomic perspectives focusing on the strategies of different economic agents. Based on solid quantitative evidence, this original work will prove to be a valuable resource for academics and students of strategy and organization, economic historians and applied economists.

This second edition includes a new first chapter and an extensive additional concluding essay addressing key issues in the debates and controversies which followed initial publication.
