Developmental Coordination Disorder and its Consequences John Cairney,2015-01-01

Developmental Coordination Disorder (DCD) is a neuro-developmental disorder that affects one in every twenty children. Children with DCD have problems with motor coordination that make everyday tasks such as active play, writing, eating, and dressing difficult and frustrating. Despite how common this health condition is, DCD is often misunderstood and frequently goes undiagnosed. In *Developmental Coordination Disorder and its Consequences*, international experts on DCD from several disciplines present the latest evidence on the diagnosis, consequences, and neuropsychological underpinnings of the disorder. With chapters covering consequences related to mental health, social functioning, and physical health and activity, this collection is the most comprehensive volume to cover the health and social consequences of DCD in children. Clearly

written, it will be of interest to parents, teachers, and physicians interested in this disorder.

Understanding Motor Behaviour in Developmental Coordination Disorder Anna Barnett, Elisabeth Hill, 2019-03-13 Although Developmental Coordination Disorder (DCD, sometimes referred to as 'Dyspraxia') has received less attention than other developmental disorders, its impact can be severe and long-lasting. This volume takes a unique approach, pairing companion chapters from international experts in motor behaviour with experts in DCD. Current understanding of the motor aspects of DCD are thus considered in the context of general motor behaviour research. *Understanding Motor Behaviour in Developmental Coordination Disorder* offers an overview of theoretical and methodological issues relating to motor development, motor control and skill acquisition, genetics, physical education and occupational therapy. Critically, Barnett and Hill ground DCD research within what is known about motor behaviour and typical development, allowing readers to evaluate the nature and extent of work on DCD and to identify areas for future research. This unique approach makes the book invaluable for students in developmental psychology, clinical psychology, movement science,

physiotherapy, physical education, and special education, as well as researchers and professionals working in those fields.

Current Perspectives on Developmental Coordination Disorder (DCD) Kate Wilmut, Catherine Purcell, Jacqueline Williams, 2022-03-10

Handbook of Educational Psychology Lyn Corno, Eric M. Anderman, 2015-07-06 The third edition of the Handbook of Educational Psychology is sponsored by Division 15 of the American Psychological Association. In this volume, thirty chapters address new developments in theory and research methods while honoring the legacy of the field's past. A diverse group of recognized scholars within and outside the U.S. provide integrative reviews and critical syntheses of developments in the substantive areas of psychological inquiry in education, functional processes for learning, learner readiness and development, building knowledge and subject matter expertise, and the learning and task environment. New chapters in this edition cover topics such as learning sciences research, latent variable models, data analytics, neuropsychology, relations between emotion, motivation, and volition (EMOVO),

scientific literacy, sociocultural perspectives on learning, dialogic instruction, and networked learning. Expanded treatment has been given to relevant individual differences, underlying processes, and new research on subject matter acquisition. The Handbook of Educational Psychology, Third Edition, provides an indispensable reference volume for scholars in education and the learning sciences, broadly conceived, as well as for teacher educators, practicing teachers, policy makers and the academic libraries serving these audiences. It is also appropriate for graduate level courses in educational psychology, human learning and motivation, the learning sciences, and psychological research methods in education and psychology.

The Role of Corporate Sustainability in Asian Development Gilbert Lenssen, Jay Hyuk

Rhee, Fabien Martinez, 2017-05-11 This book examines the challenges faced by seven multinational companies - Intel, Lenovo, Samsung Electronics, ZTE, BMW Hyundai Motor Company, Mahindra and Mahindra - in their endeavour to contribute to the economic, environmental and social development of Asia. The lessons learned from the examination of these business practices may directly contribute to

an increase in the practice of sustainable management and may as such contribute to positive economic, environmental and social impact of companies in this region. The cases are highly relevant for management theoreticians seeking to deepen our understanding of corporate sustainability in an area where scholars, practitioners and policy-makers can expect new questions, problems and challenges in the years ahead. The book is also of high interest to policy review agencies, policy makers and welfare economists seeking to support the development of a comprehensive sustainability framework for managing social and environmental issues in the context of Asia.

Pediatric Neurology Olivier Dulac, Maryse Lassonde, Harvey B. Sarnat, 2013-04-24 The child is neither an adult miniature nor an immature human being: at each age, it expresses specific abilities that optimize adaptation to its environment and development of new acquisitions. Diseases in children cover all specialties encountered in adulthood, and neurology involves a particularly large area, ranging from the brain to the striated muscle, the generation and functioning of which require half the genes of the whole genome and a majority of mitochondrial ones. Human being nervous system is

sensitive to prenatal aggression, is particularly immature at birth and development may be affected by a whole range of age-dependent disorders distinct from those that occur in adults. Even diseases more often encountered in adulthood than childhood may have specific expression in the developing nervous system. The course of chronic neurological diseases beginning before adolescence remains distinct from that of adult pathology – not only from the cognitive but also motor perspective, right into adulthood, and a whole area is developing for adult neurologists to care for these children with persisting neurological diseases when they become adults. Just as pediatric neurology evolved as an identified specialty as the volume and complexity of data became too much for the general pediatrician or the adult neurologist to master, the discipline has now continued to evolve into so many subspecialties, such as epilepsy, neuromuscular disease, stroke, malformations, neonatal neurology, metabolic diseases, etc., that the general pediatric neurologist no longer can reasonably possess in-depth expertise in all areas, particularly in dealing with complex cases. Subspecialty expertise thus is provided to some trainees through fellowship programmes following a general pediatric neurology

residency and many of these fellowships include training in research. Since the infectious context, the genetic background and medical practice vary throughout the world, this diversity needs to be represented in a pediatric neurology textbook. Taken together, and although brain malformations (H. Sarnat & P. Curatolo, 2007) and oncology (W. Grisold & R. Soffietti) are covered in detail in other volumes of the same series and therefore only briefly addressed here, these considerations justify the number of volumes, and the number of authors who contributed from all over the world. Experts in the different subspecialties also contributed to design the general framework and contents of the book. Special emphasis is given to the developmental aspect, and normal development is reminded whenever needed – brain, muscle and the immune system. The course of chronic diseases into adulthood and ethical issues specific to the developing nervous system are also addressed. A volume in the Handbook of Clinical Neurology series, which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the

neurosciences, their impact on the understanding of neurological disorders and on patient care

Pediatric Neurology Part I Joanne Volden, 2013-04-24 Nonverbal learning disability (NLD) is described as a subtype of specific learning disability where the source of the disability is a difficulty in processing nonverbal information. The child with NLD presents with problems in visual, spatial, and tactile perception but with strengths in rote verbal skills. Traditionally, these children were recognized by their difficulties in arithmetic which presented a stark contrast with their strengths in spelling and decoding text. They also exhibited a split between their verbal IQ (VIQ) and performance IQ (PIQ) scores with the VIQ being significantly higher than PIQ. Over time, however, diagnostic criteria have evolved and the broadened definition of the NLD syndrome has led many to question the utility and uniqueness of the NLD diagnosis. In addition, shifting diagnostic standards have made research results difficult to replicate. In short, the research to date leaves many unanswered questions about (1) the definition of the NLD syndrome, (2) the pervasiveness of the academic, social and psychopathological difficulties, (3) the source of the NLD syndrome, and (4) the degree to which it

overlaps with other conditions. This chapter outlines a brief history of the NLD syndrome, how it is currently conceptualized, and some of the current debate about the unanswered questions above.

Health and Children with Disabilities Megan MacDonald, Samuel W. Logan, 2017-11-23 Articles within this e-book are focused on the health of children with disabilities. Various frameworks have been used to articulate the dynamic interaction of the individual, environment and the task as it relates to child health. A majority of the contributing authors in this special topic are researchers within the field of adapted physical activity. This field embraces a broad perspective of inclusiveness and attitudes of acceptance.

Treating NVLD in Children Jessica Broitman, John M. Davis, 2013-03-14 Children with nonverbal learning disabilities (NVLD) have needs that can take many forms and may, over time, require consultation and collaboration with professionals from several fields. Given that multiple specialists may be involved in working with children with NVLD – as well as the array of treatment variables – even seasoned practitioners may find themselves in confusing situations. Treating NVLD in Children

takes a developmental view of how the problems and needs of young people with nonverbal learning disabilities evolve and offers a concise guide for professionals who are likely to contribute to treatment. Expert practitioners across specialties in psychology, education, and rehabilitative therapy explain their roles in treatment, the decisions they are called on to make, and their interactions with other professionals. Collaborative interventions and teamwork are emphasized, as are transitions to higher learning, employment, and the adult world. Among the book's key features are: A new four-subtype model of NVLD, with supporting research. A brief guide to assessment, transmitting results, and treatment planning. Chapters detailing the work of psychologists, therapists, coaches, and others in helping children with NVLD. Material specific to improving reading, writing, and mathematics. Overview of issues in emotional competency and independent living. An instructive personal account of growing up with NVLD. Treating NVLD in Children: Professional Collaborations for Positive Outcomes is a key resource for a wide range of professionals working with children, including school and clinical child psychologists; educational psychologists and therapists; pediatricians; social workers and school

counselors; speech and language therapists; child and adolescent psychiatrists; and marriage and family therapists.

Children with Developmental Coordination Disorder David Sugden, Mary Chambers, 2005-01-28

The term Developmental Coordination Disorder (DCD) is used to describe a group of children who have difficulty with tasks involving movement such that it interferes with their daily living or academic progress. As with other developmental disorders such as autistic spectrum disorder, attention deficit disorder and dyslexia, DCD is now a prominent concern of both researchers and practitioners. This text is aimed at both researchers and professionals who work in a practical manner with the condition and includes professionals in health, occupational therapists, physiotherapists, health visitors, paediatricians, and - in the educational field - teachers and others who are in daily contact with the children - their parents. The essence of the text is that work with children should be guided by research evidence driving the clinical practice which in turn raises more questions for research. The authors in this text have both experience in research and are engaged in the day-to-day clinical work with children and bring both of these to bear in the chapters they have written.

Neuroimaging Yongxia Zhou, 2020-06-24 In vivo brain neuroimaging with cutting-edge technologies

has achieved great success with high spatial and temporal resolutions. Several distinct medical imaging perspectives such as disease neurobiology, multimodal imaging techniques and applications, large-size clinical trials of neuro-oncology, and bioinformatics with illustrative examples and comprehensive summaries could expand our knowledge of neuroimaging mechanism, methodologies, and applications. This book highlights the possibility and achievement of early detection and multiple neuroimaging biomarkers based on various features for pathophysiological probing and therapeutic prevention. It examines the use of neuroimaging techniques such as magnetic resonance imaging (MRI), electroencephalography (EEG), and near-infrared resonance spectroscopy (NIRS) with specific and innovative biomedical applications. It provides thorough reviews, accurate descriptions, and confirmative evidences of many related important research topics together with up-to-date imaging network management.

Climate Policy Options Post-2012 Bert Metz,the Netherlands,Mike Hulme,Tyndall

Centre,2013-07-04 This special issue of the Climate Policy journal addresses the following key

questions: * What long-term range of policies for climate change adaptation and mitigation should Europe pursue to adequately enhance sustainability on a global level? * What are the implications of long-term European climate strategy for the design of a global post-2012 climate regime? * What are the key concerns of different stakeholders and how will these concerns impact on long-term climate policy? These questions were discussed during two workshops, commissioned by the European Forum on Integrated Environmental Assessment (EFIEA) and jointly organized by the National Institute of Public Health and the Environment (RIVM), The Netherlands and the Tyndall Centre for Climate Change Research, UK. Selected papers from these workshops were adapted and peer-reviewed for publication. International experts offer detailed policy analysis and review the links between policy and economics, sustainable development, technology and adaptation. Also included are introductory and concluding remarks from the guest editors, highlighting key points and offering an expert synthesis of the workshop discussions. This will be invaluable reading for professionals, researchers and academics interested in climate change and climate policy, policy makers, policy analysts, energy

consultants, and representatives from industry planning their own long-term energy strategies.
