Genealogy of the Purchase Family in Britain and Southern Africa Nancy R. Purchase,H. Graham Purchase,2008 A fascinating book covering fourteen generations of the extended Purchase family. The Purchase ancestors from England were related to Rev. Charles Haddon Spurgeon from London and were missionaries to Southern Africa. They settled in Northern Rhodesia and raised their families under very primitive conditions. In addition to instilling Christian principles into local Africans, they taught them common farming and building skills. The descriptions of confrontations with wild animals and interactions with native Africans are at times riveting. Successive generations of Purchases spread out all over the world.

Drug Misuse and Community Pharmacy Janie Sheridan, John Strang, 2002-11-14 Drug misuse is a major challenge for health professionals in the 21st century, and community pharmacy holds a key place in the management of prescribed medication, the provision of health education and promotion messages to drug users. Two decades ago there would have been no need for a book to describe such the role of community pharmacy; however, since more people are injecting drugs now and HIV is on the rise, community pharmacists have found their services in higher demand. The quality practice of tomorrow hinges on trained and competent practitioners working in a variety of community pharmacy settings. *Drug Misuse and Community Pharmacy* explains the historical, research and practical aspects. Experts use a practical and evidence-based approach to educate students of pharmacy, pre-registration pharmacists, community pharmacists working with drug users and anyone involved in developing and managing primary healthcare for drug misusers.

Heroin Addiction and the British System: Treatment and policy responses John Strang, Michael Gossop, 2005 Presenting a comprehensive account of the development of policies and treatments, *Heroin Addiction* brings together the perspectives of policy makers, practitioners and social commentators.

Drugs Royal College of Psychiatrists, 2000 This book, written by a multi-disciplinary group of experts, aims to stimulate an informed debate about the possible alternatives to these unsuccessful policies. It describes the historical reasons why alcohol and tobacco are legal while heroin and amphetamine

are not. It discusses the reasons why people use drugs, the consequences of their doing so and the benefits and limitations of treatment. The authors investigate the lessons to be learnt from previous attempts to curb drug and alcohol use, how the 1.4 billion pounds that the UK Government currently devotes to drug control might be better spent in future, and what would be likely to happen if cannabis, or even heroin, were to be 'legalised'.

Introduction to the Fast Multipole Method Victor Anisimov, James J.P. Stewart, 2019-12-19 Introduction to the Fast Multipole Method introduces the reader to the theory and computer implementation of the Fast Multipole Method. It covers the topics of Laplace's equation, spherical harmonics, angular momentum, the Wigner matrix, the addition theorem for solid harmonics, and lattice sums for periodic boundary conditions, along with providing a complete, self-contained explanation of the math of the method, so that anyone having an undergraduate grasp of calculus should be able to follow the material presented. The authors derive the Fast Multipole Method from first principles and systematically construct the theory connecting all the parts. Key Features Introduces each topic from first principles Derives every equation presented, and explains each step in its derivation Builds the necessary theory in order to understand, develop, and use the method Describes the conversion from theory to computer implementation Guides through code optimization and parallelization

Context-Sensitive Compression of Database Updates for Wireless Transmission, 1998 This report presents ways of encoding database to database updates (DDUs) to minimize communications bandwidth. The methods discussed are flexible and more easily extended than bit oriented protocols (BOPs). The strengths and weaknesses of DDUs and BOPs are discussed. Typical DDUs are shown and the various data types sent in messages are explained. An analysis is performed to empirically determine the savings obtained by using the encoding methods. Finally, a decoder that generates structured query language (SQL) DDUs is presented as an example of the applicability of the algorithms to act as DDU translators.

Biomass to Biofuel Supply Chain Design and Planning under Uncertainty Mir Saman Pishvaei, Shayan Mohseni, Samira Bairamzadeh, 2020-11-25

Biomass to Biofuel Supply Chain Design and Planning under Uncertainty: Concepts and Quantitative Methods explores the design and optimization of biomass-to-biofuel supply chains for commercial-scale implementation of biofuel projects by considering the problems and challenges encountered in real supply chains. By offering a fresh approach and discussing a wide range of quantitative methods, the book enables researchers and practitioners to develop hybrid methods that integrate the advantages and features of two or more methods in one decision-making framework for the efficient optimization of biofuel supply chains, especially for complex supply chain models. Combining supply chain management and modeling techniques in a single volume, the book is beneficial for graduate students who no longer need to consult subject-specific books alongside mathematical modeling textbooks. The book consists of two main parts. The first part describes the key components of biofuel supply chains, including biomass production, harvesting, collection, storage, preprocessing, conversion, transportation, and distribution. It also provides a comprehensive review of the concepts, problems, and opportunities associated with biofuel supply chains, such as types and properties of the feedstocks and fuel products, decision-making levels, sustainability concepts, uncertainty analysis and risk management, as well as integration of biomass supply chain with other supply chains. The second part focuses on modeling and optimization of biomass-to-biofuel supply chains under uncertainty, using different quantitative methods to determine optimal design. Proposes a general multi-level framework for the optimal design and operation of biomass-to-biofuel supply chains through

quantitative analysis and modeling, including different biomass and waste biomass feedstock, production pathways, technology options, transportation modes, and final products Explores how modeling and optimization tools can be utilized to address sustainability issues in biofuel supply chains by simultaneously assessing and identifying sustainable solutions Presents several case studies with different regional constraints to evaluate the practical applicability of different optimization methods and compares their performance in real-world situations Includes General Algebraic Modeling System (GAMS) codes for solving biomass supply chain optimization problems discussed in different chapters
