*Advances in Contact Linguistics* Norval Smith, Tonjes Veenstra, Enoch Oladé Aboh, 2020-10-15 Issues in multilingualism and its implications for communities and society at large, language acquisition and use, language diversification, and creative language use associated with new linguistic identities have become hot topics in both scientific and popular debates. A ubiquitous aspect of multilingualism is language contact. This book contains twelve articles that discuss specific aspects of Contact Linguistics. These articles cover a wide range of topics in the field, including creoles, areal linguistics, language mixing, and the sociolinguistic aspects of interactions with audiences. The book is dedicated to Pieter Muysken whose work on pidgin and creole languages, mixed languages, code-switching, bilingualism, and areal linguistics has been ground-breaking and inspirational for the authors in this book, as well as numerous other scholars working on the various facets of this rapidly expanding field.

*Progress in Mycology* Tulasi Satyanarayana, Sunil Kumar Deshmukh, Mukund V. Deshpande, 2022-02-22 Indian mycologists have extensively studied various groups of fungi such as soil fungi, aquatic fungi, marine fungi, endophytic fungi, fungi associated with man and animals. Though several books on various aspects of fungi are published, this is the first account of the history and development in mycology in India. This book is the second volume of the two-volume book *Progress in Mycology: An Indian Perspective*. While volume 1 contains the historical aspects, taxonomy and information about the various groups of fungi, this volume focuses majorly on the biotechnological applications of the different groups of fungi. It discusses topics such as the extremophilic fungi, the history and development in *Candida* research, progress of mycotoxin research in India etc. It provides a detailed account of the various enzymes and bio-active molecules derived from fungi. India shows a very high biodiversity of fungi, and this book discusses these different group of fungi and their

industrial and biotechnological applications. This book is useful to students, teachers and researchers in botany, microbiology, biotechnology and life sciences, agriculture and industries using fungi to produce various valuable products.

A Modern Guide to National Urban Policies in Europe Karsten Zimmermann, Valeria Fedeli, 2021-04-30 Written in a clear and concise style, this Modern Guide provide a timely overview and comparison of urban challenges and national urban policies in 13 European countries, addressing key issues such as housing, urban regeneration and climate change. A team of international contributors explore the gap between the rise of international urban agendas and variegated national urban policies, examining whether a more bespoke approach is better than the traditional 'one size fits all'.

**Rosaceae Fruit Development and Quality** Jia-Long Yao, Yuepeng Han, Chunying Kang, Zhongchi Liu, 2022-02-22

*The Genomes of Rosaceous Berries and Their Wild Relatives* Timo Hytönen, Julie Graham, Richard Harrison, 2018-06-08 This book collates the most up to date information on *Fragaria*, and *Rubus* genomes. It focuses on the latest advances in the model system *Fragaria vesca*, along with the allied advances in economically important crops. Covering both basic and applied aspects of crop genomics, it illustrates strategies and resources for the study and utilization of genome sequences and aligned functional genomics resources. Rosaceous berries are collectively an increasingly important set of high-value global crops, with a trade value of over £2 billion dollars per annum. The rosaceous berries strawberry, raspberry and blackberry share some common features at the genome scale, namely a range of ploidy levels in each genus and high levels of heterozygosity (and associated inbreeding depression) due to self-incompatibility systems, dioecy, or multispecies hybridization events. Taken together, although the genomes are relatively compact, these biological features lead to significant challenges in the assembly and analysis of berry

genomes, which until very recently have hampered the progress of genome-level studies. The genome of the woodland strawberry, *Fragaria vesca*, a self-compatible species with a homozygous genome was first sequenced in 2011 and has served as a foundation for most genomics work in *Fragaria* and to some extent *Rubus*. Since that time, building upon this resource, there have been significant advances in the development of genome sequences for related crop species. This, coupled with the revolution in affordable sequencing technology, has led to a suite of genomics studies on *Fragaria* and more recently *Rubus*, which undoubtedly aid crop breeding and production in future years.
