Owen Rees

Death from the Skies! Philip C. Plait, 2008 It's only a matter of time before a cosmic disaster spells the end of the Earth. But how concerned should we be about any of these catastrophic scenarios? And if they do pose a danger, can anything be done to stop them?

War in Space Bowen Bleddyn E. Bowen, 2020-06-18 Applying strategic theory to outer space and drawing out the implications for international relations. Offers a definitive and original vision of space warfare that theorises often-overlooked aspects of contemporary space activities based in the discipline of Strategic Studies. This original research draws out the implications of spacepower for wider debate in grand strategy and IR. Applies the theory in a topical and contentious area within contemporary grand strategy - anti-access and area-denial warfare in the Taiwan Strait between China and America. Key principles are summarised in seven propositions to make the key take-aways of theory applicable and memorable for researchers and practitioners. This book presents a theory of spacepower and considers the implications of space technology on strategy and international relations. The spectre of space warfare stalks the major powers as outer space increasingly defines geopolitical and military competition. As satellites have become essential for modern warfare, strategists are asking whether the next major war will begin or be decided in outer space. Only strategic theory can explore the decisiveness and effects of war in space upon 'grand strategy' and international relations. The author applies the wisdom of military strategy to outer space, and presents a compelling new vision of Earth orbit as a coastline, rather than an open ocean or an extension of airspace as many have assumed. Rooted in the classical military works of Clausewitz, Mahan, and Castex to name a few, this book presents comprehensive principles for strategic thought about space that explain the pervasive and inescapable influence of spacepower on strategy and the changing military balance of the 21st century.

Can Science End War Everett Dolman, 2015-10-19 Free-roaming killer drones stalk the battlespace looking for organic targets. Human combatants are programmed to feel no pain. Highpower microwave beams detonate munitions, jam communications, and cook internal organs. Is this vision of future war possible, or even inevitable? In this timely new book, Everett Carl Dolman examines the relationship between science and war. Historically, science has played an important role in ending wars - think of the part played by tanks in breaching trench warfare in the First World War, or atom bombs in hastening the Japanese surrender in the Second World War - but to date this has only increased the danger and destructiveness of future conflicts. Could science ever create the conditions of a permanent peace, either by making wars impossible to win, or so horrific that no one would ever fight? Ultimately, Dolman argues that science cannot, on its own, end war without also ending what it means to be human.

Death from Above Richard Austin, 1990 When forces from the Federated States of Europe attack America's Orbital Station, the Guardians must embark on a search-and-destroy mission to retrieve the station's laser weaponry from the enemy.

Data Publics Peter Mörttenböck, Helge Mooshammer, 2020-05-31 Data has emerged as a key component that determines how interactions across the world are structured, mediated and represented. This book examines these new data publics and the areas in which they become operative, via analysis of politics, geographies, environments and social media platforms. By claiming to offer a mechanism to translate every conceivable occurrence into an abstract code that can be endlessly manipulated, digitally processed data has caused conventional reference systems which hinge on our ability to mark points of origin, to rapidly implode. Authors from a range of disciplines provide insights into such a political economy of data capitalism; the political possibilities of techno-logics beyond data appropriation and data refusal; questions of visual, spatial and geographical organization; emergent ways of life and the environments that sustain them; and the current challenges of data publics, which is explored via case studies of three of the most influential platforms in the social media economy today: Facebook, Instagram and Whatsapp. Data Publics will be of great interest to academics and students in the fields of computer science, philosophy, sociology, media and communication studies, architecture, visual culture, art and design, and urban and cultural studies.

Dynamics of Meteor Outbursts and Satellite Mitigation Strategies Glenn E. Peterson, 1999 The potential threat posed by Leonid meteoroids to orbiting spacecraft over the next several years calls for new dynamic mitigation strategies to assist the satellite community in reducing the danger to its vehicles. This book offers deliberate dynamic mitigation strategies to complement the traditional shielding strategies, providing mission operators additional ways to decrease the danger. Five different attitude control and orbit maneuvering options are examined in detail. The information is presented in algorithmic form to allow technically competent, but meteoroid inexperienced, operators to easily understand the phenomena, assess the danger, and implement procedures. Although general in scope, the book emphasizes the Leonid meteor events of the 1998-2002 timeframe.

Space Ethics Brian Patrick Green, 2021-10-19 An introduction to the basic issues of space ethics: the technology, the impact on society, and the frontiers of thinking about space exploration from theory to practice.

The Cambridge Guide to the Solar System Kenneth R. Lang, 2011-03-03 Richly illustrated with full-color images, this book is a comprehensive, up-to-date description of the planets, their moons, and recent exoplanet discoveries. This second edition of a now classic reference is brought up to date with fascinating new discoveries from 12 recent Solar System missions. Examples include water on the Moon, volcanism on Mercury's previously unseen half, vast buried glaciers on Mars, geysers on Saturn's moon Enceladus, lakes of hydrocarbons on Titan, encounter with asteroid Itokawa, and sample return from comet Wild 2. The book is further enhanced by hundreds of striking new images of the planets and moons. Written at an introductory level appropriate for undergraduate and high-school students, it provides fresh insights that appeal to anyone with an interest in planetary science. A website hosted by the author contains all the images in the book with an overview of their importance. A link to this can be found at www.cambridge.org/solarsystem.

Spaces of Security Mark Maguire, 2019-01-22 An ethnographic investigation into the dynamics between space and security in countries around the world. It is difficult to imagine two contexts as different as a soccer stadium and a panic room. Yet, they both demonstrate dynamics of the interplay between security and space. This book focuses on the infrastructures of security, considering locations as varied as public entertainment venues to border walls to blast-proof bedrooms. Around the world, experts, organizations, and governments are managing societies in the name of security, while scholars and commentators are writing about surveillance, state violence, and new technologies. Yet in spite of the growing emphasis on security, few truly consider the spatial dimensions of security, and particularly how the relationship between space and security varies across cultures. This volume explores spaces of security not only by attending to how security is produced by and in spaces, but also by emphasizing the ways in which it is constructed in the contemporary landscape. The book explores diverse contexts ranging from biometrics in India to counterterrorism in East Africa to border security in Argentina. The ethnographic studies demonstrate the power of a spatial lens to highlight aspects of security that otherwise remain hidden, while also adding clarity to an elusive and dangerous way of managing the world.

Space Forces Fred Scharmen, 2021-11-02 The radical history of space exploration from the Russian Cosmists to Elon Musk. Many societies have imagined going to live in space. What they want to do once they get up there - whether conquering the unknown, establishing space colonies, privatising the moon's resources - reveals more than expected. In this fascinating radical history of space exploration, Fred Scharmen shows that often science and fiction have combined in the imagined dreams of life in outer space, but these visions have real implications for life back on earth. For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth. For others, such as Wernher Von Braun, it was an engineering task that combined, in the Space Race, the Cold War, and during World War II, with destructive geopolitics. Arthur C. Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction. Meanwhile NASA planned and managed the space station like an earthbound corporation. Today, the market has arrived into outer space and exploration is the plaything of superrich technology.

billionaires, who plan to privatise the mineral wealth for themselves. Are other worlds really possible? Bringing these figures and ideas together reveals a completely different story of our relationship with outer space, as well as the dangers of our current direction of extractive capitalism and colonisation.

Space Strategy: Defensive Shields Or Death from Above ,1991 For the last year I have heard time and time again that the cold war is over. Articles were published by the NDU Press which spoke of US Strategy After The Cold War, and the Washington Post headlines screamed (before 2 August) of the Peace Dividend as a result of the end of the East-West confrontation. Experts in National Security spoke often of the end of the cold war and what the new multi-polar world would look like, and Gorbachev won the Nobel Peace Prize. This simple soldier DOES NOT, however, believe that the cold war is over! The peace dividend is a delusion which may prove disastrous for our country in the long run. I believe, as did Winston Churchill, that the Soviet Union is a riddle wrapped in a mystery inside an enigma. While I will agree that the current situation is irreversible to the extent that it will never go back to the way it was before glasnost and perestroika, I can never believe that the Soviet government will become a Jeffersonian Democracy without a violent revolution. And what is most frightening is that we have no experience in dealing with a nuclear super-power embroiled in violent civil war. One misstep in the future may prove catastrophic.

Deep Space Warfare John C. Wright,2019-10-31 Since the Cold War, outer space has become of strategic importance for nations looking to seize the ultimate high ground. World powers establishing a presence there must consider, among other things, how they will conduct warfare in orbit. Leaders must dispense with Buck Rogers notions about operations in space and realize that policies there will have serious ramifications for geopolitics. How should nations view space? How should they fight there? What would space warfare look like and how should strategists approach it? Offering critical observations regarding this unique theater of international relations, a military professional explores the strategic implications as human affairs move beyond Earth's atmosphere.

Indefensible Space Michael Sorkin,2013-05-13 Showing how the upswell of paranoia and growing demand for security in the post-9/11 world has paradoxically created widespread insecurity, these varied essays examine how this anxiety-laden mindset erodes spaces both architectural and personal, encroaching on all aspects of everyday life. Starting from the most literal level—barricades and barriers in front of buildings, beefed up border patrols, gated communities, safe rooms,—to more abstract levels—enhanced surveillance at public spaces such as airports, increasing worries about contagion, the psychological predilection for fortified space—the contributors cover the full gamut of securitized public life that is defining the zeitgeist of twenty-first century America

The Stench of Space Keevy McAlavy,2012-12-03 When you do everything right and the universe ends, it's a tragedy. When you do everything wrong and the universe ends, it's fun. From the editor: A preposterous grouping of obviously random characters, thrown together in a haphazard adventure, made up without any forethought what-so-ever. Cringe as incompetent self-styled 'newspaper' reporter Rogicphil Sufliptic is tasked to save the universe from a bunch of idiots who happen to live on a planet we are asked to believe is made of deodorant. Don't waste your time reading this book as you'd be better off licking stamps.

Military Departures, Homecomings and Death in Classical Athens Owen Rees,2022-01-13 This volume sheds new light on the experience of ancient Greek warfare by identifying and examining three fundamental transitions undergone by the classical Athenian hoplite as a result of his military service: his departure to war, his homecoming from war having survived, and his homecoming from war having died. As a conscript, a man regularly called upon by his city-state to serve in the battle lines and perform his citizen duty, the most common military experience of the hoplite was one of transition – he was departing to or returning from war on a regular basis, especially during extended periods of conflict. Scholarship has focused primarily on the experience of the hoplite after his return, with a special emphasis on his susceptibility to Post-Traumatic Stress Disorder (PTSD), but the moments of transition themselves have yet to be explored in detail. Taking each in turn, Owen Rees examines the transitions from two sides: from within the domestic environment as a member of an oikos, and from within the military environment as a member of the army. This analysis presents a new template for each and effectively maps the experience of the hoplite as he moves between his domestic and military duties. This allows us to reconstruct the effects of war more fully and to identify moments with the potential for a traumatic impact on the individual.

The Top 10 Myths about Evolution Cameron M. Smith,2009-09-25 In this concise, accessible, myth-busters handbook, two renowned educators clearly dispel the ten most common myths about evolution. Using a refreshing, jargon-free style, they set the record straight that evolution is just a theory. Illustrations.

Routledge Handbook of War, Law and Technology James Gow,Ernst Dijxhoorn,Rachel Kerr,Guglielmo Verdirame,2019-05-15 This volume provides an authoritative, cutting-edge resource on the characteristics of both technological and social change in warfare in the twenty-first century, and the challenges such change presents to international law. The character of contemporary warfare has recently undergone significant transformation in several important respects: the nature of the actors, the changing technological capabilities available to them, and the sites and spaces in which war is fought. These changes have augmented the phenomenon of non-obvious warfare, making understanding warfare one of the key challenges. Such developments have been accompanied by significant flux and uncertainty in the international legal sphere. This handbook brings together a unique blend of expertise, combining scholars and practitioners in science and technology, international law, strategy and policy, in order properly to understand and identify the chief characteristics and features of a range of innovative developments, means and processes in the context of obvious and non-obvious warfare. The handbook has six thematic sections: Law, war and technology Cyber warfare Autonomy, robotics and drones Synthetic biology New frontiers International perspectives. This interdisciplinary blend and the novel, rich and insightful contribution that it makes across various fields will make this volume a crucial research tool and guide for practitioners, scholars and students of war studies, security studies, technology and design, ethics, international relations and international law.
