Windows Lockdown! Andy Walker,2008-07-28 Today, if you own a Windows computer you need to understand the risks and the potential damage security threats pose. The mere act of turning on an Internet-connected computer can put you, your family, and even your personal finances at risk! This book defines all the threats an average household might face and provides strategies to

turn novice and basic users into adept home security experts, making you safer and more secure from cyber criminals. We start off with plain English definitions for security mumbo jumbo, and then we dig in with step-by-step instructions to help you cut your exposure in less than 10 minutes! Finally, we provide steps for more involved security measures that you can do in a weekend. We also take an in-depth look at the security measures Microsoft put in Windows Vista. We also look at how Vista responds to the key threats. It teaches you how to tweak the system and make Microsoft's new security features—like the User Access Control—less annoying and helps you adjust the system to be usable. It shows you how to set up Vista to protect your system from your kids—the biggest security hazard to your computer. • More than 5 million spam emails flood the Internet daily—many with your name on them—we show you how to make yourself invisible to detestable spammers! • Did you know that hackers are snooping around your IP address right now, while you read this? They might already have breached what security you have and could be running amok with your personal data. Stop them dead in their tracks with a few simple steps! • Identity theft is the most popular form of consumer fraud today, and last year thieves stole more than \$100 million from people just like you. Put a stop to the madness with the steps provided in this book! • Spyware—nasty little programs that you might not even know you have installed on your PC—could be causing your PC to crash. We show you how to root it out of your system and prevent

further infection. Attacks on the Press Committee to Protect Journalists (CPJ), 2013-02-04 The world's most

comprehensive guide to international press freedom From Aleppo to Zacatecas, Beijing to Brasilia, the past decade has seen a sharp rise in the number of journalist imprisonments, assassinations, and disappearances worldwide. Caught between warlords and religious extremists, corrupt police and drug cartels, and hemmed in by increasingly oppressive censorship laws, journalists have never been at such peril, nor asked to pay such a high price for the ethical practice of their profession. Begun as a simple typewritten list in 1986, Attacks on the Press has grown to become the definitive annual assessment of press freedoms globally. Compiled by the Committee to Protect Journalists, it provides up-to-the-minute analyses of media conditions, press freedom violations, and emerging threats to journalists in every corner of the world. In this 2013 edition, you will find front-line reports and analytical essays by CPJ experts covering an array of topics of critical importance to journalists, including: Journalist casualties at the front lines of conflicts in Syria, Nigeria, Somalia, Afghanistan, and other global hot spots The curtailment of Internet freedoms across Southeast Asia, with an emphasis on the draconian measures now in place in Vietnam, Malaysia, and Thailand The status of investigations into the disappearances of 35 journalists worldwide, and why more than half of those disappeared went missing in Mexico and Russia The rise in journalist imprisonments globally, the spate of new anti-terrorism laws that made it possible, and the example set by the U.S. government in the wake of 9/11 The state of journalistic freedoms in Iran

since the Green Movement and the practice of summary imprisonment of Iranian journalists. How the rise of mobile Internet technology and social media has engendered new dangers for journalists from both insurgent groups and the governments they are fighting. In addition to being an invaluable source of timely information and guidance for media professionals, Attacks on the Press gives voice to journalists globally, providing them with a platform for direct advocacy with governments and a seat in discussions at the UN, OAS, EU, AU, and other official bodies.

Hacker, Hoaxer, Whistleblower, Spy Gabriella Coleman, 2015-10-06 The ultimate book on the worldwide movement of hackers, pranksters, and activists collectively known as Anonymous—by the

writer the Huffington Post says “knows all of Anonymous’ deepest, darkest secrets” “A work of anthropology that sometimes echoes a John le Carré novel.” –Wired Half a dozen years ago, anthropologist Gabriella Coleman set out to study the rise of this global phenomenon just as some of its members were turning to political protest and dangerous disruption (before Anonymous shot to fame as a key player in the battles over WikiLeaks, the Arab Spring, and Occupy Wall Street). She ended up becoming so closely connected to Anonymous that the tricky story of her inside–outside status as Anon confidante, interpreter, and erstwhile mouthpiece forms one of the themes of this witty and entirely engrossing book. The narrative brims with details unearthed from within a notoriously mysterious subculture, whose semi-legendary tricksters—such as Topiary, tflow, Anachaos, and Sabu—emerge as complex, diverse, politically and culturally sophisticated people. Propelled by years of chats and encounters with a multitude of hackers, including imprisoned activist Jeremy Hammond and the double agent who helped put him away, Hector Monsegur, Hacker, Hoaxer, Whistleblower, Spy is filled with insights into the meaning of digital activism and little understood facets of culture in the Internet age, including the history of “trolling,” the ethics and metaphysics of hacking, and the origins and manifold meanings of “the lulz.”

The Future of Violence Benjamin Wittes, Gabriella Blum, 2015-03-10 The ability to inflict pain and suffering on large groups of people is no longer limited to the nation-state. New technologies are

putting enormous power into the hands of individuals across the world—a shift that, for all its sunny possibilities, entails enormous risk for all of us, and may even challenge the principles on which the modern nation state is founded. In short, if our national governments can no longer protect us from harm, they will lose their legitimacy. Detailing the challenges that states face in this new world, legal scholars Benjamin Wittes and Gabriella Blum controversially argue in [Title TK] that national governments must expand their security efforts to protect the lives and liberty of their citizens. Wittes and Blum show how advances in cybertechnology, biotechnology, and robotics mean that more people than ever before have access to technologies—from drones to computer networks and biological data—that could possibly be used to extort or attack states and private citizens. Security, too, is no longer only under governmental purview, as private companies or organizations control many of these technologies: internet service providers in the case of cyber terrorism and digital crime, or academic institutions and individual researchers and publishers in the case of potentially harmful biotechnologies. As Wittes and Blum show, these changes could undermine the social contract that binds citizens to their governments. In this brave new world of dispersed threats, Wittes and Blum persuasively argue that the best means for safeguarding our liberty and privacy are strong governmental surveillance and security networks. Indeed, they show—through engaging looks at political thinkers from Thomas Hobbes to the

Founders and beyond—that security and liberty are mutually supportive, rather than existing in a precarious balance in which the increase in one leads to a proportional decrease in the other. And not only must we bolster our domestic security efforts, but we must think internationally. Our best defense is increasingly a transnational one: more multinational forces and greater action to protect (and protect against) the territory of weaker states who do not yet have the capability to police themselves. [Title TK] is at once an exposé of our emerging world—one in which students can print guns with 3-D printers and scientists' manipulations of viruses can be recreated and unleashed by ordinary people—and an authoritative blueprint for how government and individuals must adapt to it.
