Mohs Micrographic Surgery Stephen N. Snow, George R. Mikhail, 2004 Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery--even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer--up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

Dermatopathology Compass Vladimir Vincek, 2021-05 This book is intended for residents of dermatology and pathology. The sheer number of different skin diseases makes the field of dermatopathology very hard to master. For a novice in the field, it is easy to get lost in the myriad of names and patterns that are often so similar but still different. Many years ago, as a new resident studying the field of dermatopathology, I remember many times where I felt like I was lost in the woods. Therefore, my goal for this book was to serve as a compass to residents to orient themselves in their dermatopathology journey. The chapters are organized so that the text description and photos are on the same page. I tried to provide low and high magnification photos for each disease as that is the way slides are examined under the microscope. I also tried to describe two diseases with similar histopathology on the same page so that they can be compared. Toward the end of each chapter, after describing all entities, I provided a summary page with recommendations for how to approach the diseases described in that chapter. Every chapter ends with composite photos of all diseases in that chapter for a quick overview. Some diseases are intentionally described in multiple chapters because of their overlapping histology. My hope is that *Dermatopathology Compass* will help all readers to navigate through the maze of dermatopathology more easily

An Introduction to Indonesian Historiography Soedjatmoko, 2007 In the first major work on Indonesian historiography to have appeared in any language, twenty-two outstanding scholars survey available source materials in Asia and Europe and discuss the current state of Indonesian historical scholarship, the approaches and methods that might be fruitful for future research, and the problems that confront Indonesian historians today. The contributions which can be made to historical studies by other disciplines - such as economics, sociology, anthropology, and international law - are discussed by specialists in these fields. Problems of Indonesian historiography are presented not only from points of view of the different social sciences, but also from those of historians who differ in approach and interpretation from one another. This unique work, now brought back to life in Equinox Publishing's Classic Indonesia series, proves to be great value to historians and social scientists as an introduction to both sources for and different approaches to the history of an important part of the world. Edited by one of Indonesia's leading scholars, Soedjatmoko, as well as Mohamad Ali, G.J. Resnik and George McT. Kahin, *An Introduction to Indonesian Historiography* features contributions from John Bastin, C.C. Berg, Buchari, J.C. Bottoms, C.R. Boxer, L. Ch. Damais, Hoesein Djajadiningrat, H.J. de Graf, Graham Irwan, Koichi Kishi, Koentjaraningrat, Ruth T. McVey, J. Noorduynd, J.M. Romein, R. Soekmono, Tjan Tjoe Som, F.J.E. Tan, W.F. Wertheim and P.J. More than double the length of the first edition, this newest edition includes added procedures and interventions like: new lasers and energy devices for skin resurfacing and pigmentation; non-invasive fat reduction and skin tightening using cryolipolysis, radiofrequency, ultrasound, and chemical adipocytolysis; specific post-skin cancer excision reconstruction techniques; and novel approaches for melanoma.

Personalized, Evolutionary, and Ecological Dermatology Robert A. Norman, 2016-09-21 This book discusses the exciting potential for dermatology to embrace developments to enhance the profession's valuable pattern recognition, diagnostic, and treatment skills. Personalized medicine (PM) and genomics are easily accessible and enable the customization of healthcare using molecular analysis to influence medical decisions, practices, and therapies for the individual patient. The evolution of the skin, and the manner in which dermatological conditions are described and managed, reveals the need to consider many aspects on a personal level. New research data are based on the use of evolutionary medicine and genomics to highlight how we can become more successful at finding the most efficacious types of antibiotic or therapy and dosage for a particular disease or pathogen and build a competitive edge by prevention and risk management against invasive viruses, bacteria, or wrongly administered drugs. As more is understood about what grows on us and how it all interacts, along with how the introduction of new antibiotics, biologics, and other therapies affect our skin's ecological balance, this book aims to create a heightened sense of the importance and offerings of ecological dermatology.

Evidence Based Dermatology Howard I. Maibach, 2011 Evidence-based thinking in clinical medicine has impacted greatly on the physician's approach to clinical care. Evidence-Based Dermatology introduces and encourages the concept of evidence-based patient care in dermatology. Incorporating a text that is much more than merely the summary of trial data, the authors worked to explore disease mechanisms and treatments in greater depth and detail in order to provide more insight for the reader. In addition to promoting the understanding of the evidence-based philosophy, the authors have focused on some of the fundamentals in dermatology that need to be approached differently. Issues such as the interpretation of clinical research, disease-oriented evidence versus patient-care evidence, and the use of placebo are examined.

Dermatology in Rural Settings Robert T. Brodell, Adam C. Byrd, Cindy Firkins Smith, Vinayak K. Nahar, 2021-09-15 This book addresses the maldistribution of health care between people in dense cities and more rural areas. This proactive resource provides solutions that will motivate dermatologists to make a difference, including free rural clinics and incentives to attract dermatologists to the aforementioned areas. Comprehensive yet concise, the book encompasses not only the logistics of the healthcare issues, including location, incentive, and set up of facility but includes insight into the effectiveness of teledermatology, a practice more commonly utilized due to the COVID-19 Pandemic. Additionally, chapters examine the relationship between economic viability and quality of care, as well as government incentives and political action to mitigate this issue. Unique and timely, *Dermatology in Rural Settings* is an invaluable resource for dermatologists, resident dermatologists, and academic physicians interested in rural and urban health.
