Design Dimensions Cynthia Maris Dantzic,1990

Human Dimension and Interior Space Julius Panero,Martin Zelnik,1979-11-01 The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

Introduction to Three-Dimensional Design Kimberly Elam,2020-10-06 Introduction to Three-Dimensional Design is the first book to teach graphic design students the fundamentals of three-dimensional design through hands-on drawing and model projects. The book combines key concepts with carefully crafted exercises so students can apply three-dimensional design principles in practice. From initial sketches through experimental prototypes to the final model solutions, students will develop a deeper understanding of the often complex elements and principles of three-dimensional design.

Introduction to Two-Dimensional Design John Bowers,1999-01-18 He demonstrates how competing approaches to 2D design - including those based on intuition, play, chance, and empirical research - can be used successfully,

either alone or in combination.--BOOK JACKET.

Public Places - Urban Spaces Matthew Carmona,Tim Heath,Taner Oc,Steve Tiesdell,2012-09-10 Public Places - Urban Spaces is a holistic guide to the many complex and interacting dimensions of urban design. The discussion moves systematically through ideas, theories, research and the practice of urban design from an unrivalled range of sources. It aids the reader by gradually building the concepts one upon the other towards a total view of the subject. The author team explain the catalysts of change and renewal, and explore the global and local contexts and processes within which urban design operates. The book presents six key dimensions of urban design theory and practice - the social, visual, functional, temporal, morphological and perceptual - allowing it to be dipped into for specific information, or read from cover to cover. This is a clear and accessible text that provides a comprehensive discussion of this complex subject.

Ken Cato Ken Cato,2003 The first in the continuing series features the work of Ken Cato, an Australian designer who is regarded as one of the icons of graphic design. Cato is responsible for many internationally recognisable company identities and is author of several books, as well as running an enormously successful annual *Design in Three Dimensions* Reino Randall,Edward C. Haines,1965

Urban Design: Green Dimensions Peter Shirley,J. C. Moughtin,2006-08-11 In Green Dimensions, Cliff Moughtin relates sustainable development and green design to the realm of urban design and development. Examining regional and local frameworks for design and planning, this book shows how sustainable urban design can be implemented on every scale. Working from a strong theoretical base, the author uses case studies and discusses policy developments, in order to challenge the conventional wisdom on sustainable design. The book provides a rounded discussion of the application and suitability of current practice, and predicts future design needs. Updating the reader on topics such as energy efficiency, sustainable city forms and the culture of new urbanism, this completely revised and restructured second edition also includes brand new chapters on the Urban Park and Bio-diversity.

Public Places Urban Spaces Matthew Carmona,2021-02-15 Public Places Urban Spaces provides a comprehensive overview of the principles, theory and practices of urban design for those new to the subject and for those requiring a clear and systematic guide. In this new edition the book has been extensively revised and restructured. Carmona advances the idea of urban design as a continuous process of shaping places, fashioned in turn by shifting global, local and power contexts. At the heart of the book are eight key dimensions of urban design theory and practice—temporal, perceptual, morphological, visual, social, functional—and two new process dimensions—design governance and place production. This extensively updated and revised third edition is more international in its scope and coverage, incorporating new thinking on technological impact, climate change adaptation, strategies for urban decline, cultural and social diversity, place value, healthy cities and more, all illustrated with nearly 1,000 carefully chosen images. Public Places Urban Spaces is a classic urban design text, and everyone in the field should own a copy.

Spaces in Architecture Bert Bielefeld, 2019-04-01 The design of a building is a complex process in which the architect develops spaces which are defined by a number of different parameters. The most important of these are space requirements, distances, furniture and fittings, and movement zones. From the dimensions of the human body it is possible to derive guide values for these reference sizes that make spaces comfortable to be in and to use. Spaces in Architecture is a useful reference work for students and designers for quickly looking up detailed information on space scenarios that occur in many different types of buildings. For example, the book lists all important dimensions for entrance areas, doors, staircases, ramps, and elevators. On the basis of this fundamental information it is possible to design buildings in terms of function and type.

Shaping Space Paul Zelanski, Mary Pat Fisher, 2007 Introductory guide to three-dimensional design and sculpture, which offers an in-depth exploration of aesthetic and practical considerations of working three-dimensionally.

The Pop-Up Generation , 2012-09-13 Together with Lotte van Gelder, Edelkoort selected over sixty works to be included in this book which deals with temporary, mobile or recyclable projects. A wide scale of different pop-up-themed projects are featured in the publication, labelled with the symbols for hybrid, D.I.Y., temporary, mobile or a combination of the four. In addition to the colourful works, a number of essays by Ahmed El Hady, Carla Fernândez, Bruce Sterling, Dr. Martine Naillon, Paola Antonelli, Hedwig Heinsman and Edelkoort herself tackle questions faced by today's generation of designers and thinkers. The pop-up theme is tackled from many angles in the short essays. We read about the pop-up mentality as being able to shift between the 2D and 3D world at ease, discussing a universe in which designers have become architects and fashion designers make films, where guerrilla actions seem to be by-products of the pop-up generation, becoming viral just as quickly as fading from existence.

Size Matters Lakshmi Bhaskaran, 2004 Size Matters tackles the challenges that designers face when organizing large amounts of information. Projects such as company reports, magazine and book design exhibitions, catalogues, timetables and directories all invoke particular design questions that must be resolved. This book will inspire designers to take on large projects with confidence-chapters explore navigation and hierarchies placement of images for overall rhythm of viewing, management of volume of material and systems for processing it, as well as the physical considerations of format: whether this is the information architecture of the web, placement of exhibition stands or print limitations in book design. Using illustrated essays, real-world examples, pull-out interviews with leading design figures and extended captions, Size Matters allows for first-hand experiences and detailed practical specifics, providing the reader with the skills, inspiration, and knowledge to succeed with projects that can at first seem daunting.

Design in three dimensions Reino Randall, Edward C. Haines, 1972

Principles of Three-dimensional Design Stephen Luecking, 2002 This text is a thorough introduction to three-dimensional design: the importance of forms and objects in space. It covers the areas of problem solving: form/plane/space relationships. Of equal importance is its unique coverage of functional, cultural, and spatial contexts that condition the meanings we impart in creating objects. Its underlying goal is to provide a practical

and theoretical understanding of how objects and the spaces they occupy shape the physical and perceptual nature of our reality.

For centuries, architects have turned their hand to custom furniture in a practice that has resulted in a number of iconic designs, including the timeless Eames Lounge and Ottoman and the ubiquitous Barcelona chair created by Mies van der Rohe for his acclaimed Barcelona Pavilion. Furniture by Architects beautifully illustrates bespoke design by some of the world's leading architects, who are increasingly designing furniture as clients seek interiors customised to specific needs. Foster + Partners' 520 Armchair for Walter Knoll has the texture and comfort found in a traditional leather armchair, while the Liquid Glacial Dining & Coffee Table by Zaha Hadid Design, made from polished clear Plexiglas, capture the spirit of her architecture, with their distinctive fluid lines, revealing the waves and ripples below the surface.
