Research for Designers Gjoko Muratovski, 2015-12-26 Today, designers design services, processes and organizations; craft skills no longer suffice. We need to discover, define and solve problems based upon evidence. We need to demonstrate the validity of our claims. We need a guide to design research that can educate students and be a reference for professionals. And here it is: a masterful book for 21st century designers.' - Don Norman, Professor and Director of Design Lab, University of California San Diego, and former Vice President, Advanced Technologies, Apple 'Muratovski provides a structured approach to introducing students and researchers to design research and takes the reader through the research process from defining the research problem to the literature review on to data collection and analysis. With such practical and useful chapters, this book should prove to be essential reading in design schools across the world.' - Tracy Bhamra, Professor of Sustainable Design and Pro Vice-Chancellor of Enterprise, Loughborough University Design is everywhere: it influences how we live, what we wear, how we communicate, what we buy, and how we behave. In order for designers to design for the real world, defining strategies rather than just implementing them, they need to learn how to understand and solve complex, intricate and often unexpected problems. This book is a guide to this new creative process. With this book in hand, students of design will: understand and apply the vocabulary and strategies of research methods learn how to adapt themselves to unfamiliar situations develop techniques for collaborating with non-designers find and use facts from diverse sources in order to prove or disprove their ideas make informed decisions in a systematic and insightful way use research tools to find new and unexpected design solutions. Research for Designers is an essential toolkit for a design education and a must-have for every design student who is getting ready to tackle their own research.

COOP 2014 - Proceedings of the 11th International Conference on the Design of Cooperative Systems, 27-30 May 2014, Nice (France) Chiara Rossitto, Luigina Ciolfi, David Martin, Bernard Conein, 2014-06-02 This volume presents the proceedings of the 11th International Conference on the Design of Cooperative Systems (COOP 2014). The conference is a venue for multidisciplinary research contributing to the design, assessment and analysis of cooperative systems and their integration in organizations, public venues, and everyday life. COOP emerged from the European tradition of Computer Supported Cooperative Work (CSCW) and Cognitive Ergonomics as practiced in France. These proceedings are a collection of 28 papers reflecting the variety of research activities in the field, as well as an increasing interest in investigating the use and design of ICT in all aspects of everyday life and society, and not merely in the workplace. The papers represent a variety of research topics, from healthcare to sustainable mobility to disaster response, in settings from all over the world. For the first time, the proceedings include papers presented in an Early-Career Researchers Track which was organized in order to give young researchers the opportunity to discuss their work with an international community. This collection of papers provides a picture of new developments and classic topics of research around cooperative systems, based on the principle that a deep knowledge of cooperative practices is a key to understanding technology impacts and producing quality designs. The

articles presented will appeal to researchers and practitioners alike, as they combine an understanding of the nature of work with the possibilities offered by novel digital technologies.

Designing for Learning in an Open World Gráinne Conole, 2012-09-21 The Internet and associated technologies have been around for almost twenty years. Networked access and computer ownership are now the norm. There is a plethora of technologies that can be used to support learning, offering different ways in which learners can communicate with each other and their tutors, and providing them with access to interactive, multimedia content. However, these generic skills don't necessarily translate seamlessly to an academic learning context. Appropriation of these technologies for academic purposes requires specific skills, which means that the way in which we design and support learning opportunities needs to provide appropriate support to harness the potential of technologies. More than ever before learners need supportive 'learning pathways' to enable them to blend formal educational offerings, with free resources and services. This requires a rethinking of the design process, to enable teachers to take account of a blended learning context.
