Towards a Philosophy of Digital Media Alberto Romele, Enrico Terrone, 2018-05-17 This book uses the conceptual tools of philosophy to shed light on digital media and on the way in which they bear upon our existence. At the turn of the century, the rise of digital media significantly changed our world. The digitizing of traditional media has extraordinarily increased the circulation of texts, sound, and images. Digital media have also widened our horizons and altered our relationship with others and with ourselves. Information production and communication are still

undoubtedly significant aspects of digital media and life. Recently, however, recording, registration and keeping track have taken the upper hand in both online practices and the imaginaries related to them. The essays in this book therefore focus primarily on the idea that digital media involve a significant overlapping between communication and recording.

Technology and Society, second edition Deborah G. Johnson, Jameson M. Wetmore, 2021-08-24 Writings by thinkers

ranging from Rokeya Sakhawat Hossain to Bruno Latour that focus on the interconnections of technology, society, and values. Technological change does not happen in a vacuum; decisions about which technologies to develop, fund, market, and use engage ideas about values as well as calculations of costs and benefits. In order to influence the development of technology for the better, we must first understand how technology and society are inextricably bound together. These writings--by thinkers ranging from Bruno Latour to Francis Fukuyama--help us do just that, examining how people shape technology and how technology shapes people. This second edition updates the original significantly, offering twenty-one new essays along with fifteen from the first edition. The book first presents visions of the future that range from technological utopias to cautionary tales and then introduces several major STS theories. It examines human and social values and how they are embedded in technological choices and explores the interesting and subtle complexities of the technology-society relationship. Remedying a gap in earlier theorizing in the field, many of the texts illustrate how race and gender are intertwined with technology. Finally, the book offers a set of readings that focus on the sociotechnical challenges we face today, treating topics that include cybersecurity, geoengineering, and the myth of neutral technology.
