Marine Geography Barbara Bischof, 2023-09-01 *Marine Geography: Ocean Space and Sense of Place* advances the field of marine geography to begin to define it as a unique subdiscipline of geographic thought, and demonstrates how core theory and perspectives must be tweaked to be effective in approaching geographic challenges such as natural resource management, fisheries, coastal development, marine environmental research and exploration, mobilities and legal issues of boundaries and enforcement, and any topics that include human-nature interactions in this space. It provides the geographic theories that must be adjusted and highlights unique spatial characteristics that must be accommodated appropriately to be applied towards issues in marine and coastal systems including boundary-making, dimensions, cultures of science/technologies, access, social constructions, and place vs space. This book lays out ways in which ocean space has been organized by humans and how we have determined boundaries and boundary systems in ocean space. Though *Marine Geography: Ocean Space and Sense of Place* serves as a reference for a university-level course in marine and coastal geography, it also expands to other disciplines that contain a spatial component including environmental science, maritime industries, political science and international relations, policy professionals, natural resource management, planning/management organizations, and other fields that deal with marine or maritime spaces as an aspect of their focus.
