Everyday Engineering Dominique Vinck, 2009-01-23 A guide to the everyday working world of engineers, written by researchers trained in both engineering and sociology. *Everyday Engineering* was written to help future engineers understand what they are going to be doing in their everyday working lives, so that they can do their work more effectively and with a broader social vision. It will also give sociologists deeper insights into the sociotechnical world of engineering. The book consists of ethnographic studies in which the authors, all trained in both engineering and sociology, go into the field as participant-observers. The sites and types of engineering explored include mechanical design in manufacturing industries, instrument design, software debugging, environmental management within companies, and the implementation of a system for separating household waste. The book is organized in three parts. The first part introduces the complexity of technical practices. The second part enters the social and cultural worlds of designers to grasp their practices and motivations. The third part examines the role of writing practices and graphical representation. The epilogue uses the case studies to raise a series of questions about how objects can be taken into account in sociological analyses of human organizations.

Wagtendonk, 2015-09 Trade Paperback + PDF eBook bundle version: Trade paperback book comes with code to download the eBook from ASA's website. This comprehensive textbook explains the aerodynamics of helicopter flight as well as helicopter maneuvers, going beyond the strictly how-to type of aviation manual. Helicopter pilots need to thoroughly understand the consequences of their actions and base them upon sound technical knowledge; this textbook explains why the helicopter flies and even more importantly, why it sometimes does not. Beginning with aerodynamics, each step of the process is fully illustrated and thoroughly explained--from the physics of advanced operations to helicopter design and performance--providing helicopter pilots with a solid foundation upon which to base their in-flight decisions. Containing discussions on the NOTAR (no tail rotor) system, strakes, principles of airspeed and high-altitude operations, operations on sloping surfaces, and sling operations, this revised edition also includes the latest procedures Federal Aviation Administration.

Rebuilding the State Institutions Juan Antonio Le Clercq, Jose Pablo Abreu Sacramento, 2019-11-29 Contemporary Mexico faces a complex crisis of violence and insecurity with high levels of impunity and the lack of an effective rule of law. These weaknesses in the rule of law are multidimensional and involve elements of institutional design, the specific content of the laws, particularities of political competition and a culture of legality in a country with severe social inequalities. This book discusses necessary institutional and legal reforms to develop the rule of law in a context of democratic, social and economic transformations. The chapters are organized to address: 1) The concept of the 'rule of law' and its measurement; 2) The fragility of the 'rule of law' in Mexico; 3) Structural reforms and implementation challenges; 4) Social exclusion and the culture of legality. The book addresses decision-makers, civil servants, consultants, scholars, lecturers, and students focusing on public policy, rule of law, sociology of law, legislative studies and practice, impunity, and areas of political philosophy. • The book presents an interdisciplinary and integrated approach for understanding the rule of law in Mexico, taking into account national particularities, the regional context and global comparisons. • Chapters discuss recent institutional reforms in Mexico from a critical point of view and explore possible next steps to achieve effective implementation. • This book addresses the links between a weak rule of law and social phenomena like insecurity, violence, corruption and democratic deficits.
