Dr. Eno's Guide to Living Powerfully with Diabetes Eno Nsima-

Obot, 2011-11-17 During my years in practice as a primary care physician, I discovered that a lot of patients recently been diagnosed or who have been living with diabetes for quite some time had a lot of questions about their disease and do not have the resources with sufficient clarity that they truly 'get it'. With the number of people with diabetes expected to double to 44 million in the next 25 years in the United States, now more than ever, we need to become more aware of measures to prevent or treat early diabetes. In my experience, a typical 15 minute office visit is not enough time to answer all the questions; especially questions that relate to how to live with the knowledge needed to move them forward. As the saying goes, 'knowledge is power'. I have written in a simple and yet illustrative phrases. I have set the book out explaining the different aspects of diabetes care using each letter of the alphabet. By empowering people with knowledge, they are able to make better informed and healthier decisions. In addition to being a physician, I am also trained as a life coach. My goal in this manual is to focus more on wellness than disease. My assertion is that being diagnosed with diabetes does not mean that you cannot live a life that focuses on being healthy and doing things to support your wellbeing. In fact on the contrary it is a call to embrace a wellness lifestyle with enthusiasm and an optimistic attitude.

Managing Diabetes and Hyperglycemia in the Hospital Setting Boris Draznin, 2016-05-20 As the number of patients with diabetes increases annually, it is not surprising that the number of patients with diabetes who are admitted to the hospital also increases. Once in the hospital, patients with diabetes or hyperglycemia may be admitted to the Intensive Care Unit, require urgent or elective surgery, enteral or parenteral nutrition, intravenous insulin infusion, or therapies that significantly impact glycemic control (e.g., steroids). Because many clinical outcomes are influenced by the degree of glycemic control, knowledge of the best practices in inpatient diabetes management is extremely important. The field of inpatient management of diabetes and hyperglycemia has grown substantially in the last several years. This body of knowledge is summarized in this book, so it can reach the audience of hospitalists, endocrinologists, nurses and other team members who take care of hospitalized patients with diabetes and hyperglycemia.

ICD-10-CM Official Guidelines for Coding and Reporting - FY 2021 (October 1, 2020 - September 30, 2021) Department Of Health And Human Services, 2020-09-06 These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

Agency for Healthcare Research and Quality, University of California, San Francisco-Stanford Evidence-Based Practice Center, 2005-12 This review was organized to bring a systematic assessment of different quality improvement strategies & their effects to the process of identifying & managing hypertension. Findings suggest that quality improvement strategies appear, in general, to be associated with the improved identification & control of hypertension. It is not possible to discern with complete confidence which specific quality improvement strategies have the greatest effects, since most of the studies included more than one quality improvement strategy.
