Integrated Diabetes Care David Simmons,Helmut Wenzel,Janice C. Zgibor,2016-10-31 Integrating care across disciplines and organisations around the needs of the person with diabetes has been proposed as an approach that could improve care while reducing cost- but has it and can it? Integrated Diabetes Care- A Multidisciplinary Approach collates evidence of worldwide approaches to both horizontal integration (across disciplines) and vertical integration (across organizations) in diabetes care and describe what was done, what worked and what appeared to be the barriers to achieving the goals of the programmes. Evidence is sought from groups who have developed different approaches to integrating diabetes care in different health systems (eg insurance vs tax payer funded, single vs multiple organization, published vs unpublished). A final chapter brings the evidence together for a final discussion about what seems to work and what does not.

My Wonderful Life with Diabetes Rick Mystrom,2013-06-01 “You are about to meet a man who never let diabetes prevent him from accomplishing everything he wanted in life: good health, success in business, community service, family, and politics. Rick Mystrom knew that understanding his disease was crucial to his health. He has become one of the most knowledgeable persons living with diabetes in my extensive practice and frequently serves as a role model and authoritative resource for others.” Jeanne R. Bonar MD, FACP, FACE—Endocrinology, Internal Medicine “It is the patient, not the doctor, who manages diabetes. Rick Mystrom is the gold medal winner for controlling his diabetes. He has become so skilled that he can predict and adjust his insulin level just by looking at the meal he is going to eat. His results: no complications from his long history of the disease. He is the expert. I am the learner.” Thomas Nighswander MD MPH

Vitreous Fluid And/or Urine Glucose Concentrations in 1,335 Civil Aviation Accident Pilot Fatalities ,2008 For aviation accident investigations at the Civil Aerospace Medical Institute (CAMI), vitreous fluid and urine samples from pilot fatalities are analyzed for glucose, and in those cases wherein glucose levels are elevated, blood hemoglobin A1c (HbA1c) is measured. These analyses are conducted to monitor diabetic pilots to ensure that their disease was in control at the time of accidents and to discover other pilots with undiagnosed and unreported diabetes. In this study, the prevalence of elevated glucose concentrations in fatally injured civilian pilots is evaluated. Glucose and HbA1c are measured by hexokinase and latex immunoagglutination inhibition methodologies, respectively. The former was adopted at the beginning of 1998, while the latter in the middle of 2001. The analytical results are electronically stored in the CAMI Toxicology Database. This database was searched for pilots from whom samples were received during 1998-2005 and whose vitreous fluid and/or urine glucose concentrations were measured. HbA1c levels and information on diabetic pilots were also retrieved. The probable cause and contributing factors of the associated accidents were obtained from the National Transportation Safety Board's (NTSB's) Aviation Accident Database. Out of 1,335 pilots involving 363 vitreous fluid, 365 urine, and 607 vitreous fluid and urine analyses, 43 pilots had elevated glucose in vitreous fluid (> 125 mg/dL) and/or in urine (> 100 mg/dL). Of the 20 pilots whose blood samples were analyzed, 9 had > 6% HbA1c-4 were known diabetics (HbA1c: 7.1; 8.3; 10.8; and 12.4%), and 5 were not known diabetics (HbA1c: 6.2; 8.2; 8.3; 8.6; and 13.0%). Urinary glucose levels were elevated in all 13 known hyperglycemic pilots. One pilot had a history of renal glycosuria (low renal threshold). The disease of the 13 diabetic pilots was not in control at the time of accidents.

Type 2 Diabetes The Owner's Manual Daryl Wein,Daryl Wein Pa,2016-01-12 Daryl Wein discovered he was among the millions of patients with type 2 diabetes while studying to become a Physician Assistant. That's when he found out that, despite type 2 diabetes making up the vast majority of cases, most of the reading material he could find was geared toward patients with type 1 diabetes. Type 2 Diabetes The Owner's Manual is his way of fixing that. This handbook is an easy-to-read guide on how to manage your blood sugar primarily through diet. It is written clearly and concisely, explaining the difference between the two diseases in a way that is easy to grasp. You don't have to be a health professional to understand the book. Wein includes concrete examples of what to eat and what to avoid. He talks about the importance of exercise and provides information about medicines in a way that the layman can comprehend without needing to know medical terminology. The book also includes a useful question-and-answer section that covers a variety of specifics about type 2 diabetes to help you make sense of it all. Wein knows about the frustration and fear diabetics feel, because he's been there. As he explains in the book, when he experienced blurred vision and other health problems while studying to become a Physician Assistant, he discovered that he was among the millions diagnosed each year with type 2 diabetes. There was no mistake: I was now a diabetic! he writes. I sat down and started crying, not something I would ordinarily allow myself to do. He goes on to describe how a mentor told him that diabetes can usually be managed easily. He made sure to explain that failing to control it can lead to serious health problems including blindness, kidney failure, and limb amputations. He offered hope. Wein's book offers the same message of hope, along with a somber reminder that failing to control diabetes can lead to premature death. He provides readers with the right information to help make sure they understand that this doesn't have to happen to them. The author also makes clear the difference between type 1 and type 2 diabetes, suggesting that type 2 diabetes needs to have a new name. That name should be carbosis, he argues, which gets right to the point that type 2 diabetes is a disease where the body does not process carbohydrates correctly. He has conveniently included tabular lists of many foods, showing the carbohydrate content of each. My intent in writing this book is to finally provide a source of information geared specifically for you and me, along with the millions of others with this disease and the many millions who have it but don't yet know it, he writes. This book is designed primarily to provide clear guidance for patients. You don't have to be a health expert to manage the disease. Wein lays it out to his patients, about eighty percent of whom, he estimates, have well-controlled blood sugar levels. Type 2 Diabetes The Owner's Manual can be your step-by-step guide on how to control your disease. Let this book help you manage type 2 diabetes rather than letting the disease manage you.

Early Diabetes Rafael A. Camerini-Dávalos, Harold S. Cole, 2013-10-22 Advances in Metabolic Disorders, Supplement 1: Early Diabetes covers the discussions during the first International Symposium on Early Diabetes. The book discusses the views of the role of genetic factors in diabetes; the genetic problem posed by the relatively high frequency of diabetes; the relationship between diabetes and prediabetes in the mother; and the congenital defect in the offspring. The text also describes the report on the genetics of diabetes among the Pima Indians, as well as the genetics of animals with spontaneous diabetes. The pathophysiology of diabetes mellitus, the concept of progression from prediabetes to chemical diabetes and then to overt diabetes, and the effect of aging on carbohydrate metabolism are also considered. The book further tackles the epidemiology of early diabetes, as well as the natural history of diabetes. The text concludes by looking into the treatment of early diabetes, including topics on insulin treatment of children with a late stage of chemical diabetes; complementary arguments in favor of the betacytotrophic action of the hypoglycemic sulphonamides; and the use of oral hypoglycemic compounds. Endocrinologists, biochemists, physiologists, and researchers working on the treatment of diabetes will find the book invaluable.

Association of Postmortem Blood Hemoglobin A1c Levels With Diabetic Conditions in Aviation Accident Pilot Fatalities, 2001 The Federal Aviation Administration's (FAA's) Office of Aerospace Medicine evaluates present and proposed medical certification standards for pilots. Under this responsibility, the FAA Civil Aerospace Medical Institute investigates the role of potential medical-or drug-related performance impairment in pilots. In previous research, abnormal glucose levels in vitreous humor (>125 mg/dL) and urine (>100 mg/dL) have been linked with diabetic conditions in pilots of fatal aviation accidents. Although these abnormal glucose levels identify pilots with elevated blood sugar at the time of death, they do not provide information on how well diabetes was controlled in these pilots. Since post-crash factors (trauma, stress, medical intervention) can dramatically affect blood glucose levels, a measure of long-term diabetic control was sought for postmortem specimens. Methods. Blood specimens from volunteers were collected and stored at room temperature for up to 52 days to mimic a postmortem condition. These specimens were analyzed for hemoglobin A1c (HbA1c) at selected time intervals during the 52-day period. Postmortem blood specimens from 34 aviation accident pilot fatalities were also analyzed. Some of these pilots had a known history of diabetes. Results. HbA1c values in blood from volunteers did not significantly change for up to 52 days. The HbA1c concentration in postmortem blood samples from pilots ranged from 3.9-10.5%. Only one pilot with a HbA1c over 6.0% did not have a history of diabetes reported to the FAA. Conclusions. HbA1c is stable in whole blood stored at room temperature for 52 days and appears to be stable in postmortem blood stored up to 84 days. HbA1c above 6.0% was found to be generally correlated with a known history of diabetes and with the abnormal vitreous humor and urine glucose levels established previously. Elevated postmortem HbA1c levels may be useful in supporting determinations of medical impairment/incapacitation in transportation accidents.
