International Textbook of Diabetes Mellitus R. A. DeFronzo, E. Ferrannini, Paul Zimmet, George Alberti, 2015-03-11 The International Textbook of

Diabetes Mellitus has been a successful, well-respected medical textbook for almost 20 years, over 3 editions. Encyclopaedic and international in scope, the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach. Sections covered include epidemiology, diagnosis, pathogenesis, management and complications of diabetes and public health issues worldwide. It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease, with each new edition always reflecting the substantial advances in the field. Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes, ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. Edited by four world-famous diabetes specialists, the book is divided into 13 sections, each section edited by a section editor of major international prominence. As well as covering all aspects of diabetes, from epidemiology and pathophysiology to the management of the condition and the complications that arise, this fourth edition also includes two new sections on NAFLD, NASH and non-traditional associations with diabetes, and clinical trial evidence in diabetes. This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development, as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available.

**Advanced Approaches in the Diagnosis and Treatment of Diabetes Mellitus and Secondary Complications** Pranav Kumar Prabhakar, Ram

Prasad, Ponnurengam Malliappan Sivakumar, 2023-10-23 As we know diabetes mellitus is the most common metabolic endocrine disorder. According to the WHO and American Diabetes Mellitus, diabetes mellitus is the 3rd leading cause of death if we were to include all secondary complications. However without including secondary complications, it is 7th place in mortality and morbidity. The point to be considered in the case of diabetes mellitus is the secondary complications caused in this condition. Almost all organs affected by diabetes and results in a potentially worse condition. The major secondary complications are neuropathy, nephropathy, retinopathy, and diabetes foot microvascular and macrovascular complications. The long term complications grow slowly in the case of diabetes. As the time living with diabetes becomes longer, controlled glucose levels will be more difficult to achieve, meaning there will be more long term complications. The aim of the current Research Topic on the secondary complications of diabetes and their management is to publish good quality research articles as well as reviews, which should address the management of diabetes, abnormalities of secondary complications and other disease involved in diabetes. Potential Topics includes but not restricted to: • Secondary complications of diabetes

mellitus • Microvascular and macrovascular complications • The role of oxidative stress in the diabetes burden • New insights in glycemic control • New strategies/ approaches to manage secondary complications such as Stearoyl CoA dismutase, Acetyl CoA Carboxylase, Adiponectin/ Adipocyte complement-related protein 30, Hormone Sensitive Lipase (HSL) Inhibitors • Recent development in the therapeutic approaches for glucose management such as Protein tyrosine phosphatase-1B (PTP1B) inhibitors, Glycogen synthase kinase-3 (GSK3) inhibitors,  $\beta$ -Adrenergic receptor agonist, Retinoid X receptor, PPAR $\alpha$  agonist, AMP activated protein kinase • Development of new target as a target for antihyperglycemic drug designing
