Design and Implementation: Solar Digital Signage and Controller Morakinyo

Adefunmini, 2015-03-16 The various side effects of the conventional non-renewable fuel powered designs are numerous. Ranging from greenhouse effect to a broad list of health hazards it poses. Also, the cost incurred in powering a signage design in a remote site or areas that are characterized by erratic power supply is outrageous. This book presents the design, construction and installation of a Solar Powered Digital Signage. The primary functions of a typical signage are to give information and to aid direction. In addition, this book presents the design and construction of low cost Solar Charge Controller in a 2kVA solar electrification. A solar electrification is a renewable means of meeting electrical energy needs. The Solar Charge Controller (SCC) is used to protect the battery from high current adverse effect on the battery. Such effects are usually cumulative in nature as they reduce the life span of the battery (secondary battery). Also, the Solar Charge Controller helps to display the connected battery charge level. The charge level may be given in terms of percentage as the case may be.

Time-of-Flight and Depth Imaging. Sensors, Algorithms and Applications Marcin Grzegorzek, Christian Theobalt, Reinhard Koch, Andreas Kolb, 2013-11-09 Cameras for 3D depth imaging, using either time-of-flight (ToF) or structured light sensors, have received a lot of attention recently and have been improved considerably over the last few years. The present techniques make full-range 3D data available at video frame rates, and thus pave the way for a much broader application of 3D vision systems. A series of workshops have closely followed the developments within ToF imaging over the years. Today, depth imaging workshops can be found at every major computer vision conference. The papers presented in this volume stem from a seminar on Time-of-Flight Imaging held at Schloss Dagstuhl in October 2012. They cover all aspects of ToF depth imaging, from sensors and basic foundations, to algorithms for low level processing, to important applications that exploit depth imaging. In addition, this book contains the proceedings of a workshop on Imaging New Modalities, which was held at the German Conference on Pattern Recognition in Saarbrücken, Germany, in September 2013. A state-of-the-art report on the Kinect sensor and its applications is followed by two reports on local and global ToF motion compensation and a novel depth capture system using a plenoptic multi-lens multi-focus camera sensor.

Air Traffic Controller Facundo Conforti, 2023-01-19 The air traffic controller job has been one of the aeronautical pillars since the beginning of time. A job little known to passengers, but highly valued by pilots and aeronautical operators. The air traffic controller represents the voice that guides the flight throughout the journey, not only in normal situations, but also during abnormal situations. From the control tower, the job of the ATC Air Traffic Controller is to order the departure and arrival of flights, to and from his airfield. A task that involves extreme concentration on the part of the air traffic controller, who must organize the flights as accurately as possible since the

slightest error in his work could cause a plane crash. Air traffic controllers at airports with extreme transits reduce their working hours so as not to be subject to too much stress since this job requires their whole attention at all times. In this work, you will learn about the main topics related to this magnificent job. A profession that will become a lifestyle.

Information Display ,2008

A Design Space for Pervasive Advertising on Public Displays Florian Alt,2013-03-01 Today, people living in cities see up to 5000 ads per day, many on public displays. More and more of these public displays are networked and equipped with sensors, making them part of a global infrastructure that is currently emerging. Such displays provide the opportunity to create a benefit for society in the form of immersive experiences and relevant content. In this way, they can overcome the display blindness that evolved over the years. Two main reasons prevent this vision from coming true: first, public displays are stuck with traditional advertising as the driving business model. Second, no common ground exists for researchers or advertisers that outline important challenges. The main contribution of this thesis is presenting a design space for advertising on public displays that identifies important challenges - mainly from an HCI perspective. The results are envisioned to provide a basis for future research and for practitioners to shape future advertisements on public displays in a positive way.
