R. K. Mukherji

High Dilution Effects on Cells and Integrated Systems Cloe Taddei-Ferretti, Paolo Marotta, Istituto italiano per gli studi filosofici, 1998 High dilution effects constitute a major problem on the frontier of biophysics. The reported effects on simple and complex biological systems range from in vitro and in vivo models to cellular metabolism regulation, the immune system, the nervous system, intoxicated organs and organisms, and developmental models. The physical properties of high dilutions have been considered, such as the organization properties of water molecules in the presence and after the presence of solute molecules, the energy characteristics of empty and full water clusters, and their dynamical interactions with proteins. Among the mechanisms responsible for the high dilution effects, a non-molecular transfer of information has been hypothesized.

Transdisciplinarity and Translationality in High Dilution Research Leoni Bonamin, Silvia Waisse, 2019-05-02 While evidence for the biological effects of high dilutions (above Avogadro's number) has been extensively documented since the 1980s, it seems to remain invisible to part of the global scientific community. This book provides investigators and other interested readers with direct access to the latest research, conducted between 2009 and 2019, by members of the Groupe International de Recherche sur l'Infinitésimal, the first international scientific society devoted to scientific studies of high dilutions. As shown here, the state of the art in high dilution research allows answering with a sound, evidence-based "no" to the question "Is homeopathy really that implausible?" Therefore this book is an essential contribution to the ongoing debate on

complementary and alternative medicine, much-needed by practitioners, patients, and governments in the formulation of healthcare policies.

Homoeopathic Dose and Dilutions R. K. Mukherji, 2003 This book will give you a complete and comprehensive idea to the readers, about What is Homoeopathic dilution; The Rhythme of Homoeopathic dilution; How the Homoeopathic dilutions are prepared; What Homoeopathic research is.

Ultra High Dilution P.C. Endler, J. Schulte, 2013-04-17 The idea of editing this book was born in the winter of 1988/1989. Christian Endler was organizing the workshop 'Wasser und Information' (water and information) in Austria [1], and Jürgen Schulte was working on a publication of his results on atomic cluster stabilities and long-range electromagnetic interaction in atomic clusters. It was Franz Moser from the Technical University of Graz who brought these two together. After a talk that Moser had given in Bremen, Schulte explained to him his ideas about clusters and long range interaction, and his concern about reliable theories and experiments in research on ultra high dilutions (UHD) and homoeopathy. He was suggested to be a speaker at the Austrian workshop. Reviewing the contributions of this workshop and the current literature on UHD and homoeopathy, especially the PhD thesis by Giesela King [2] and the excellent survey by Marco Righetti [3], we decided to work on a book in order to critically encourage more scientists to work and publish in this field with a high scientific standard. What we had in mind was a useful contribution to the goal to lift research on UHD and homoeopathy to an internationally acceptable scientific standard, to encourage international scientists to work in this area and to establish UHD and homoeopathy in academic science. Delayed by our individual

academic careers in our specific fields, and delayed by lack of funds it took us about four years to finish this book.

High Dilution Effects: Physical and Biochemical Basis Nirmal C. Sukul, Anirban Sukul, 2006-02-08 Since the subject of high dilution effects is still a subject for debate, this volume provides evidence in support of effects from control clinical studies, clinical records from veteran physicians, controlled experiments on animals and plants, and in vitro tests without any organisms (Chapter II). An overview of the methods for preparing drugs at ultra high dilution is also provided as well as the basic principles of homeopathy, which has been alleviating human suffering through the use of these drugs for several hundred years (Chapter I). Chapter III provides physical basis of high dilutions as evidence from the NMR, IR, UV and fluorescence spectra of those drugs. Since water is used as the diluents media, the structure and dynamics of water polymers in relation to high dilution are discussed in order to facilitate easy comprehension of this physical aspect, the basic principles of spectroscopy are also described. Chapter IV focuses on the mechanism of action of potentized drugs in the living system, discussing the structure of the cell, the plasma membrane, the integral proteins on the membrane, the interaction between these proteins and high dilutions and the manifestations of the therapeutic effects of high dilutions. Some aspects, peculiar to homeopathy, such as the chief miasm psora, and the literalities and time modalities of symptoms and drug action are interpreted from a scientific perspective. Chapter IV ends with a brief discussion on water structures and the origin of life to show the natural evolution of high dilution effects. The book not only helps in understanding the physical basis of high dilutions and their mechanism of

action in organisms but provides many new avenues of investigation into this interdisciplinary field of science.

Fundamental Research in Ultra High Dilution and Homoeopathy J. Schulte, P.C. Endler, 2012-12-06 Jurgen Schulte and Christian Endler met in 1990 at an international conference on the Structure of Water held in the Lecture Halls of the University of Graz (Austria). Disappointed by the lack of a systematic strategy of research into the physics of homoeopathy Jurgen Schulte started to work on the establishment of scientifically acceptable research standards in physics of homoeopathy and encouraged academic researchers to establish a coordinated and focused research strategy. In 1994, with the help of major representatives of the international research community, they edited one of the first academic interdisciplinary books on Ultra High Dilution and homoeopathy that underwent a rigorous scientific international referee process before publishing. Due to the dedicated help of the prominent referees (BD Josephson, Nobel Laureate, Cavendish Lab. , Cambridge; M Bastide, Fac de Pharmacy, University Montpellier; RG Jahn, Aerospace Science, Princeton University), the book 1994 was quickly considered a mile stone and turning point for the scientific approach of research into Ultra High Dilution and homoeopathy. Since then the academic research community has grown considerably and many international conferences have been held. Today, research into homoeopathy is to be accepted by the European Union as part of the academic sciences, worthy to be funded at European Union level; an effort that took many years of research coordination and research strategy development. Excerpts of the Research Strategy of the European Committee for Homoeopathy (ECH) have been included in this book.

Signals and Images Leoni Villano Bonamin, 2008-07-29 The “Groupe International de Recherche sur l’Infinitésimal” (GIRI) was created in 1986 by Professor Madeleine Bastide and Doctor René Halm. Madeleine Bastide was its President for several years. The group comprises actually more than 100 researchers from different disciplines (physicians, chemists, biologists, pharmacologists, physicists, etc.) from 22 different countries. The original aim, which, for the most part, has now been achieved, was to create a working group to exchange ideas and results concerning the effects of very low doses and high dilutions. Madeleine Bastide then proposed to publish a collection of the lectures given at their scientific meetings in a bilingual book (French and English) entitled “Signals and Images”. The first volume was published in 1990 by the ATELIERS ALPHA BLEUE. It contains lectures on the new pharmacological approach and related concepts that were presented at the 3rd and 4th Symposiums held in Paris in 1989 and 1990. This volume treats the problem of the effects of very low doses and high dilution in in vitro and in vivo experimental models. It is conceivable that this effect, like that of elect- magnetic fields, is none other than an “ultra molecular” effect as shown in yet p- lished results. The effect could be interpreted as a piece of information, i. e. a signal whose transmission and perception remains to be elucidated. According to Madeleine Bastide “everything depends

on the nature and quality of the information, signals and images”.
