Late Cretaceous Dinosaur Eggs and Eggshells of Peninsular India Ashu Khosla, Spencer G.

Lucas, 2020-10-20 This book documents analyses of the Late Cretaceous dinosaur nesting sites of the Lameta Formation at Jabalpur, Districts Dhar and Jhabua, Madhya Pradesh; Districts Kheda and Panchmahal (Gujarat); and the Pisdura, Dongargaon and Pavna sectors in the Chandrapur Districts of Maharashtra, which are exposed in India along an east-west and central axis. In this work, special emphasis has been given to the dinosaur nesting sites of the east-central Narmada River region, including its regional geology. The work was undertaken to provide detailed information concerning dinosaur eggs, eggshell fragments, nests and clutches found in the Lameta Formation of peninsular India. Prior to the present work there had been no detailed review of systematic work on the taxonomy, and of micro- and ultrastructural studies of dinosaur eggs and eggshells from the Lameta Formation. The study documents the field and laboratory investigations that facilitated the reconstruction of the morphotaxonomy, models for the burial pattern of eggs and eggshells, taphonomic implications, and the palaeoenvironmental context and palaeoecological conditions during the Late Cretaceous at the time of the extrusion of the Deccan traps, which may have been partly responsible for the extinction of the dinosaurs. The need to follow a parataxonomic classification for Indian dinosaur eggs and eggshell types is very apparent, and this book addresses this aspect in some detail. The emphasis on the application of parataxonomic schemes is based on the description of new oospecies and their comparison with previously known forms. The present work has led to the recovery of numerous nests, many collapsed eggs and hundreds of dinosaur eggshell fragments from the localities situated near the east, west and central Narmada River regions. It will be of interest to academics and

professional palaeontologists, and all students of dinosaurs.

If You Were Raised by a Dinosaur Isabella Brooklyn, 2013-08-01 What would it have been like to be a dinosaur baby long, long ago? Every boy and girl dreams of seeing a dinosaur?but what about BEING one? Maybe a baby with Tyrannosaurus Rex as a mom? Or a gentler giant who preferred munching leaves? With lots of fascinating facts and striking illustrations that recreate a lost world millions of years old, Isabella Brooklyn and Haude Levesque guide young readers into the prehistoric era to find out. Because scientists never had the chance to study a live dinosaur in its natural environment, they can't know for sure what kind of parents dinosaurs were, or exactly how they raised their young. But by following the clues they dig up, and using the latest in medical technology, paleontologists can make educated guesses, and offer an exciting glimpse into what it might have been like to be a dinosaur child. Kids will meet dinosaurs of every type, from theropods and sauropodomorphs with their grasping, asymmetrical fingers to good mother Maiasaurus and Psittacosaurus babies who had nannies--adults that raised all the children in the group. There's also a hint of what the future of dinosaur studies will be, thanks to technology unimaginable only a few years ago.

Dinosaur Eggs Jennifer Dussling, 2000-09-11 Several dinosaur hunters went on an expedition in South America hoping to find fossils of birds from the time of the dinosaurs. What they found instead were hundreds of fossils of dinosaur eggs, some with un-hatched baby dinosaurs inside. This was something that had never been found before! Here is a fascinating look at dinosaur egg fossils and dinosaurs in general, written in accessible language so kids can read it all by themselves.
