The World of Dinosaurs Mark Norell, 2019-03-07 In *The World of Dinosaurs*, paleontologist Dr Mark Norell takes a detailed look at everything we know about these wondrous creatures, drawing on the very latest research in the field. Produced in association with the American Museum of Natural History and drawing on their archives, Norell examines every facet of the dinosaur mystery, from the scattering of dinosaur fossils after the breakup of Pangea to the different categorisations of these monstrous reptiles. Even subjects you may think you know about - such as the species' extinction - are looked at in a new light. Illustrated with exceptional scientific recreations of key species, as well as documentary photographs, sketches and notes from dino discoveries, this is the ultimate photographic reference book on dinosaurs.

The Second Jurassic Dinosaur Rush Paul D. Brinkman, 2010-07-15 The so-called "Bone Wars" of the 1880s, which pitted Edward Drinker Cope against Othniel Charles Marsh in a frenzy of fossil collection and discovery, may have marked the introduction of dinosaurs to the American public, but the second Jurassic dinosaur rush, which took place around the turn of the twentieth century, brought the prehistoric beasts back to life. These later expeditions—which involved new competitors hailing from leading natural history museums in New York, Chicago, and Pittsburgh—yielded specimens that would be reconstructed into the colossal skeletons that thrill visitors today in museum halls across the country. Reconsidering the fossil speculation, the museum displays, and the media frenzy that ushered dinosaurs into the American public consciousness, Paul Brinkman takes us back to the birth of dinomania, the modern obsession with all things Jurassic. Featuring engaging and colorful

personalities and motivations both altruistic and ignoble, The Second Jurassic Dinosaur Rush shows that these later expeditions were just as foundational—if not more so—to the establishment of paleontology and the budding collections of museums than the more famous Cope and Marsh treks. With adventure, intrigue, and rivalry, this is science at its most swashbuckling.

Transylvanian Dinosaurs David B Weishampel, Coralia-Maria Jianu, 2011-09-22
The history and science of a cluster of dinosaurs found in the Hungarian region and the story of the aristocrat who discovered them. At the end of the time of the dinosaurs, Transylvania was an island in what was to become southeastern Europe. The island's limited resources affected the size and life histories of its animals, resulting in a local dwarfism. For example, sauropods found on the island measured only six meters long, while their cousins elsewhere grew up to five times larger. Here, David B. Weishampel and Coralia-Maria Jianu present unique evolutionary interpretations of this phenomenon. The authors bring together the latest information on the fauna, flora, geology, and paleogeography of the region, casting these ancient reptiles in their phylogenetic, paleoecological, and evolutionary contexts. What the authors find is that Transylvanian dinosaurs experienced a range of unpredictable successes as they evolved. Woven throughout the detailed history and science of these diminutive dinosaurs is the fascinating story of the man who first discovered them, the mysterious twentieth-century paleontologist Franz Baron Nopcsa, whose name is synonymous with Transylvanian dinosaurs. Hailed by some as the father of paleobiology, it was Nopcsa alone who understood the importance of the dinosaur discoveries in Transylvania; their story cannot be told without recounting his. *Transylvanian Dinosaurs* strikes an engaging balance between biography and scientific treatise and is sure to capture the imagination of professional paleontologists and amateur dinophiles alike. "It is rare to find a book on dinosaurs so literate, well-written, and full of insight and synthesis—particularly when the dinosaurs are so unusual. The authors lay them out for us, situate them beautifully in time, space, and cultural history, and then reassemble them and their world using all the tools of modern science. The result is a tour de force." —Kevin Padian, University of California Museum of Paleontology "A fine example of something I always try, but rarely succeed, to articulate to colleagues in paleontology, evolutionary biology, and geology who don't work on dinosaurs. Dinosaurs, within the context of their ecosystems and paleogeography, can tell us many neat things about how evolution works over long time scales." —Stephen Brusatte, *Priscum Handbook Series* American Museum of Natural History, 1915
