Toward Direct Access Intelligence Systems Heinz Von Foerster,ILLINOIS UNIV AT URBANA BIOLOGICAL COMPUTER LAB.,University of Illinois. Biological Computer Laboratory,1970 In contrast to conventional so called 'Information Storage and Retrieval Systems' which de facto store indexed documents (the data base) which upon retrieval may or may not contain the information needed by the querier who is to address such systems through highly restricted and artificial indexing languages, this project aims at the development of a data base which organizes the intelligence stored in a machine such that the desired knowledge is directly accessible to the user through a man-machine dialogue in the user's natural language. The feasibility of this approach to direct access intelligence systems (DAIS) is strongly indicated by recent results obtained by various investigators in the development of relational data structures and interacting machine programs which permit computing in the semantic domain, and in logic, theory and experimental studies of cognitive processes in living organisms. Consequently, it was proposed to continue and to complete the research and development of the conceptual, theoretical and technological foundations for the development of machine intelligence systems with direct access to a user's desired knowledge via a man-machine dialogue in the user's natural language.

Direct Access Futures David I. Silverman,2001-12-21 Make optimal use of the new futures trading technologies Direct access, the democratizing force that transformed stock trading in the 1990s, has come to the futures industry in a big way. With the advent of a new electronic futures trading infrastructure, everyone-from the former pit boss, to the hedge fund manager, to the individual investor working from home-has equal and instantaneous access to futures markets in six continents. To survive and thrive in the futures markets, experienced and novice futures traders alike need to educate themselves with the ins and outs of the electronic trading

environment. Silverman, former board member of the Chicago Mercantile Exchange who has successfully made the transition from trading on the floor to trading electronically, acquaints readers with his proven strategies for playing both the long and short sides of the futures market and profiting in all market conditions.

Trading Strategies for Direct Access Trading Robert Sales,2001 The electronic direct access method of trading doesn't mean that traders can simply click a mouse button and watch the profits roll in. Trading strategies are still needed to make the right trade at the right time. Electronic direct access trading can use many of the same strategies and techniques that have been successfully used by traders for decades. However, because this is a slightly different medium for trading, trading strategies must be altered to fit this new trading format.

Direct Access Execution ECNs, SOES, SuperDOT, and Other Methods of Trading Simit Patel,2001 Direct access trading means a whole new world of trade execution. Gone are the tradition-bound days of calling a broker, who called a broker, who called the floor of the exchange, where the order was written by hand and delivered by a runner to the floor broker. This was a time-consuming, tedious task that almost certainly guaranteed poor fills. Now, direct access traders can place an order with the click of a mouse button and be filled within seconds, eliminating the middleman and lowering commissions and reducing the infamous spread.
