Direct Broadcast Satellite Communications Donald C. Mead,1999-09-20 With its higher power and superior video and audio quality, Direct Broadcast Satellite (DBS) communications is proliferating worldwide. Many new DBS systems are evolving and with the introduction of HDTV, DBS technology is predicted to become even more prevalent. Written by a leading DBS authority, this book is required reading for anyone involved in this burgeoning field. This comprehensive reference describes the history and structure of DBS systems, the regulatory environment, the subsystems that support it, and the underlying compression technology that makes it commercially feasible. Direct Broadcast Satellite Communications can be read as a broad overview of DBS systems or can serve as a detailed technical description. In particular, the author thoroughly explains how MPEG compression standards are used to implement modern satellite broadcast systems. You will find complete information on key topics such as: International and FCC regulations Radio frequency components of DBS systems, including the shaped reflector antenna Forward error correction, looking at block codes, interleaving, and Viterbi decoding The use of cryptography for conditional access to subscription services MPEG system and transport layer MPEG-2 video and audio compression Connecting terrestrial systems and DBS uplinks The Integrated Receiver Decoder In addition, the book explores future developments, including the Spaceway and the Global Broadcast Service, as well as the MPEG-4 compression standards. Numerous case studies involving DIRECTV(TM) and the European DVB standard appear throughout the book. For other books in this series, see <http://www.awl.com/cseng/wirelessseries/>

Turbo Code Applications Keattisak Sripimanwat, 2005-10-07 Turbo Code Applications: a journey from a paper to realization presents a temporary applications of turbo codes in thirteen technical chapters. Each chapter focuses on a particular communication technology utilizing turbo codes, and they are written by experts who have been working in related areas from around the world. This book is published to celebrate the 10 year anniversary of turbo codes invention by Claude Berrou Alain Glavieux and Punya Thitimajshima (1993-2003). As known for more than a decade, turbo code is the astonishing error control coding scheme which its performance closes to the Shannon's limit. It has been honored consequently as one of the seventeen great innovations during the first fifty years of information theory foundation. With the amazing performance compared to that of other existing codes, turbo codes have been adopted into many communication systems and incorporated with various modern industrial standards. Numerous research works have been reported from universities and advance companies worldwide. Evidently, it has successfully revolutionized the digital communications. Turbo code and its successors have been applied in most communications starting from the ground or terrestrial systems of data storage, ADSL modem, and fiber optic communications. Subsequently, it moves up to the air channel applications by employing to wireless communication systems, and then rises up to the space by using in digital video broadcasting and satellite communications. Undoubtedly, with the excellent error correction potential, it has been selected to support data transmission in space exploring system as well.

Rupert Murdoch Neil Chenoweth, 2002-11-12 If you want to understand how modern media has changed the world, this is the one book you must read. Rupert Murdoch is the man everyone talks about but no one knows. He's everywhere, a larger-than-life media titan who has spent a lifetime building his company, News Corporation, from a small, struggling newspaper business in Australia into an international media powerhouse. Rupert Murdoch charts the real story behind the rise of News Corp and the Fox network: the secret debt crises and family deals, the huge cash flows through the offshore archipelagos, the New York party that saved his empire, the covert government inquiries, the tax investigations, and the bewildering duels with Bill Gates, Ted Turner, Gerry Levin, Ron Perelman, Newt Gingrich, cable king John Malone, Michael Eisner, Tony Blair, and televangelist-turned-diamond-miner Pat Robertson. Murdoch's story, however, is more than just how one man built a global business. Rupert Murdoch is both a biography of Murdoch the man (including the divorce from his wife, Anna; his remarriage to a woman young enough to be his granddaughter; and the struggle between his two sons for eventual control of the family holdings) and a "follow the money" investigation that reveals how he has managed to have such a huge impact on the communications revolution that promises to utterly transform life in the twenty-first century. The investigation concentrates on Murdoch's three great campaigns: in the 1980s, when his determination to launch an American television network overturned the media industries of three countries; in 1997, when

Murdoch took on every broadcasting group in America; and the process of reinventing himself since then, culminating in his bid to win DirecTV from General Motors. This is the saga of the man who has stalked, infuriated, cajoled, threatened, and spooked the media industry for three decades, whose titanic gambles have shaped and reshaped the media landscape. Win or lose, Murdoch is the man who has changed everything. And Neil Chenoweth is the right person to tell the story: In 1990 he wrote a magazine article that prompted a secret Australian government inquiry into Rupert Murdoch's family companies, and he's been on the Murdoch case since then. Chenoweth reveals what no person ever has about the man (and the company) who is probably the most significant media player of them all.

DirecTV, Inc., Plaintiff-appellant V. Hoa Huynh, Defendant-appellee Hoa Huynh, 2005 Federal law makes it illegal to intercept satellite TV signals without authorization and also bans modifying or assembling interception tools for sale or distribution. In this case before the Ninth Circuit, DirecTV claims that it can sue individuals for both interception of its signal and modification of receiving

equipment in cases where altered smart cards are simply inserted into standard television equipment. DirecTV claims that inserting a smart card into preexisting television equipment constitutes assembling a pirate device. The amicus brief claims that DirecTV is overreaching and also points out that legitimate security researchers would be threatened under the proposed misreading of the law. A lower court has already ruled that DirecTV cannot sue on this theory and dismissed DirecTV's attempt to double-dip by punishing individuals twice for a single offense. Brief supports a lower court decision that 47 U.S.C., section 605(e)(4) does not apply to individuals who used interception devices solely for personal use.

Data Security Breaches Rita Tehan, 2008 Personal data security breaches are being reported with increasing regularity. Within the past few years, numerous examples of data such as Social Security, bank account, credit card, and driver's license numbers, as well as medical and student records have been compromised. A major reason for the increased awareness of these security breaches is a California law that requires notice of security breaches to the affected individuals. This law, implemented in July 2003, was the first of its kind in the nation. State data security breach notification laws require companies and other entities that have lost data to notify affected consumers. As of January 2007, 35 states have enacted legislation requiring companies or state agencies to disclose security breaches involving personal information. Congress is considering legislation to address personal data security breaches, following a series of high-profile data security breaches at major financial services firms, data brokers (including ChoicePoint and LexisNexis), and universities. In the past three years, multiple measures have been introduced, but to date, none have been enacted.

The Television Code Deborah L. Jaramillo, 2018-09-26 The broadcasting industry's trade association, the National Association of Broadcasters (NAB), sought to sanitize television content via its self-regulatory document, the Television Code. The Code covered everything from the stories, images, and sounds of TV programs (no profanity, illicit sex and drinking, negative portrayals of family life and law enforcement officials, or irreverence for God and religion) to the allowable number of commercial minutes per hour of programming. It mandated that broadcasters make time for religious programming and discouraged them from charging for it. And it called for tasteful and accurate coverage of news, public events, and controversial issues. Using archival documents from the Federal Communications Commission, NBC, the NAB, and a television reformer, Senator William Benton, this book explores the run-up to the adoption of the 1952 Television Code from the perspectives of the government, TV viewers, local broadcasters, national networks, and the industry's trade association. Deborah L. Jaramillo analyzes the competing motives and agendas of each of these groups as she builds a convincing case that the NAB actually developed the Television Code to protect commercial television from reformers who wanted more educational programming, as well as from advocates of subscription television, an alternative distribution model to the commercial system. By agreeing to self-censor content that viewers, local stations, and politicians found objectionable, Jaramillo concludes, the NAB helped to ensure that commercial broadcast television would remain the dominant model for decades to come.
