Find Your Path Daniel Goodman,2019-12-03 Scientists offer personal accounts of the challenges, struggles, successes, U-turns, and satisfactions encountered in their careers in industry, academia, and government. This insightful book offers essential life and career lessons for newly minted STEM graduates and those seeking a career change. Thirty-six leading scientists and engineers (including two Nobel Prize winners) describe the challenges, struggles, successes, satisfactions, and U-turns

encountered as they established their careers. Readers learn that there are professional possibilities beyond academia, as contributors describe the paths that took them into private industry and government as well as to college and university campuses. They discuss their varying preferences for solitary research or collaborative teamwork; their attempts to achieve work-life balance; and unplanned changes in direction that resulted in a more satisfying career. Women describe confronting overt sexism and institutional gender bias; scientists of color describe the experience of being outsiders in their field. One scientist moves from startup to startup, enjoying a career of serial challenges; another spends decades at one university; another has worked in academia, industry, and government. Some followed in the footsteps of parents; others were the first in their family to go to college. Many have changed fields, switched subjects, or left established organizations for something new. Taken together, these essays make it clear that there is not one path to a profession in science, but many. Creating the Path to Success in the Classroom

Kathleen F. Gabriel, 2023-07-03 This is a book for all faculty who are concerned with promoting the persistence of all students whom they teach. Most recognize that faculty play a major role in student retention and success because they typically have more direct contact with students than others on campus. However, little attention has been paid to role of the faculty in this specific mission or to the corresponding characteristics of teaching, teacher-student interactions, and connection to student affairs activities that lead to students' long-term engagement, to their academic success, and ultimately to graduation. At a time when the numbers of underrepresented students – working adults, minority, first-generation, low-income, and international students – is increasing, this book, a companion to her earlier Teaching Underprepared Students, addresses that lack of specific guidance by providing faculty with additional evidence-based instructional practices geared toward reaching all the students in their classrooms, including those from groups that traditionally have been the least successful, while maintaining high standards and expectations. Recognizing that there are no easy answers,

Kathleen Gabriel offers faculty ideas that can be incorporated in, or modified to align with, faculty's existing teaching methods. She covers topics such as creating a positive and inclusive course climate, fostering a community of learners, increasing engagement and students' interactions, activating connections with culturally relevant material, reinforcing self-efficacy with growth mindset and mental toughness techniques, improving lectures by building in meaningful educational activities, designing reading and writing assignments for stimulating deep learning and critical thinking, and making grade and assessment choices that can promote learning.
