Dark Matter in Astro- and Particle Physics Hans-Volker Klapdor-Kleingrothaus, Richard Arnowitt, 2006-02-23
 The Fifth HEIDELBERG International Conference on Dark Matter in Astro- and Particle Physics, DARK 2004, took place at Texas A&M University, College Station Texas, USA, October 3–9, 2004. It was, after Cape Town 2002, the second conference of this series held outside Germany. The earlier meetings, starting in 1996, were held in Heidelberg. Dark Matter is still one of the most exciting and central fields of astrophysics, particle physics and cosmology. The conference covered, as usual for this series, a large range of topics, theoretical and experimental. Theoretical talks covered SUSY/SUGRA phenomenology, which provides at present a preferred theoretical framework for the existence of cold dark matter. Also included were other possible explanations of dark matter such as SUSY Q balls, exciting New Symmetries, etc. The most important experiments in the underground search for cold and hot dark matter were presented. Talks describing the current experimental dark matter bounds, what might be obtained in the near future, and the reach of future large (i.e. one ton) detectors were given. The potential of future colliders to correlate accelerator physics with dark matter searches was also outlined. Thus the reader will be able to see the present status and future prospects in the search for dark matter. The exciting astronomical evidence for dark matter and corresponding observations concerning the Milky Way's black hole, high-redshift clusters, wakes in dark matter halos were other important topics at the conference.

Dark Matter in Astroparticle and Particle Physics Hans Volker Klapdor-Kleingrothaus, Geraint F. Lewis, 2008 Social networks have emerged as a major trend in computing and social paradigms in the past few years. The social network model helps to inform the study of community behavior, allowing qualitative and quantitative assessments of how people communicate and the rules that govern communication. Social Networking and Community Behavior Modeling: Qualitative and Quantitative Measures provides a clear and consolidated view of current social network models. This work explores new methods for modeling, characterizing, and constructing social networks. Chapters contained in this book study critical security issues confronting social networking, the emergence of new mobile social networking devices and applications, network robustness, and how social networks impact the business aspects of organizations.

High Energy Physics Hesheng Chen, Dongsheng Du, Weiguo Li, Caidian Lu, 2005-05-03 The 32nd International Conference on High Energy Physics belongs to the Rochester Conference Series, and is the most important international conference in 2004 on high energy physics. The proceedings provide a comprehensive review on the recent developments in experimental and theoretical particle physics. The latest results on Top, Higgs search, CP violation, neutrino mixing, pentaquarks, heavy quark mesons and baryons, search for new particles and new phenomena, String theory, Extra dimension, Black hole and Lattice calculation are discussed extensively. The topics covered include not only those of main interest to the high energy physics community, but also recent research and future plans. 11th International Conference on High-Energy Accelerators Newman, 2013-11-21

The Conference timetable had to be so arranged as to spread the main topics over several separate sessions. It was therefore decided to publish the material in these Proceedings under nine subject headings, irrespective of session. Within each chapter, which is preceded by a list of the sessions featuring the subject, all papers, invited and contributed, whether presented at the Conference or accepted for publication only, have been arranged in some logical order. The reports of the four Panel Discussions were edited or summarized by the respective Moderator in consultation with Panel Members. In one instance, shortened versions of the Introductory Papers precede the discussion. Where possible, verbatim accounts of the often lively exchanges have been retained. The customary catalogue of high-energy accelerators has been published separately. The continuing world-wide activities in accelerator research, with its ever larger projects, are reflected by the numerous contributions accepted for inclusion in these Proceedings, which have reached the limit of what a single volume can manageably contain, while making rapid publication even harder to achieve. All the more reason to extend the gratitude of all concerned to those involved in the chain of production: - To the authors, for their prompt handing-in or timely posting of their papers. Thanks also to their secretaries who followed the guidelines for the presentation of camera-ready copy.

Engineering Physics M N Avadhanulu & TVS Arun Murthy, The book Engineering Physics is designed for the First-Year Engineering students at Jawaharlal Nehru Technological University Kakinada/Vizianagaram/Anantapur and other universities in Andhra Pradesh. The book is written with the singular objective of providing the students with a distinct source material as per the syllabus. The book covers important topics such as Interference, Diffraction, Polarization, Crystallography. X-ray Diffraction, Dielectric Materials, Magnetic Materials, Quantum Mechanics, Free Electron Theory, Semiconductors, Lasers, Fibre Optics etc. Throughout the book attention is given to the proper presentation. It has all the features essential to arouse interest and involve students in the subject.

Group Identities on Units and Symmetric Units of Group Rings Gregory T

Lee,2010-08-19 Let FG be the group ring of a group G over a field F . Write $U(FG)$ for the group of units of FG . It is an important problem to determine the conditions under which $U(FG)$ satisfies a group identity. In the mid 1990s, a conjecture of Hartley was verified, namely, if $U(FG)$ satisfies a group identity, and G is torsion, then FG satisfies a polynomial identity. Necessary and sufficient conditions for $U(FG)$ to satisfy a group identity soon followed. Since the late 1990s, many papers have been devoted to the study of the symmetric units; that is, those units u satisfying $u^* = u$, where $*$ is the involution on FG defined by sending each element of G to its inverse. The conditions under which these symmetric units satisfy a group identity have now been determined. This book presents these results for arbitrary group identities, as well as the conditions under which the unit group or the set of symmetric units satisfies several particular group identities of interest.

Diabetes Victor R. Preedy,2013-10-29 Diabetes: Oxidative Stress and Dietary Antioxidants bridges the trans-disciplinary divide among diabetologists, endocrinologists, and nutritionists in understanding and treating diabetes. The book covers, in a single volume, the science of oxidative stress in diabetes and the potentially therapeutic use of natural antioxidants in the diet or food matrix. The processes within the science of oxidative stress are described in concert with other processes such as apoptosis, cell signaling, receptor-mediated responses and more. This approach recognizes that diseases are usually multifactorial and that oxidative stress is a single component of this. Pharmacological treatments for diabetes are commonly marked by unwanted side effects, leading to treatment efforts using naturally occurring substances. But a plant-based approach alone is not sufficient; understanding the processes inherent in the oxidative stress of diabetes is vital for clinical workers, dietitians, and nutritionists. This translational work provides that understanding. The book begins by covering the basic biology of oxidative stress from molecular biology to imaging in relation to diabetes. There are chapters on neuropathy, nephropathy, atherosclerosis, cardiomyopathy, and retinopathy. The book then moves on to antioxidants in foods, including plants, components of the diet, and their relevance to diabetes. Nutritionists will use the information related to mitochondrial oxidative stress in one disease and propose new diet-related strategies to prevent such conditions arising in another unrelated disease. Dietitians will prescribe new foods or diets containing antioxidants for conditions that are refractory by conventional pharmacological treatments. Dietitians, after learning about the basic biology of oxidative stress, will be able to suggest new treatments to their multidisciplinary teams. Nutritionists and dietitians will learn about cell signaling and will be able to suggest preventive or therapeutic strategies with antioxidant-rich foods to reduce damage done by diseases involving abnormal cell signaling.

The Neumann Compendium F Bródy,T Vámos,1995-06-30 After three decades since the first nearly complete edition of John von Neumann's papers, this book is a valuable selection of those papers and excerpts of his books that are most characteristic of his activity, and reveal that of his continuous influence. The results receiving the 1994 Nobel Prizes in economy deeply rooted in Neumann's game theory are only minor traces of his exceptionally broad

spectrum of creativity and stimulation. The book is organized by the specific subjects-quantum mechanics, ergodic theory, operator algebra, hydrodynamics, economics, computers, science and society. In addition, one paper which was written in German will be translated and published in English for the first time. The sections are introduced by short explanatory notes with an emphasis on recent developments based on von Neumann's contributions. An overall picture is provided by Ulam's, one of his most intimate partners in thinking, 1958 memorial lecture. Facsimilae and translations of some of his personal letters and a newly completed bibliography based on von Neumann's own careful compilation are added.
