Teaching Strings in Today's Classroom Rebecca B. MacLeod,2018-12-07 Teaching Strings in Today's Classroom: A Guide for Group Instruction assists music education students, in-service teachers, and performers to realize their goals of becoming effective string educators. It introduces readers to the school orchestra environment, presents the foundational concepts needed to teach strings, and provides opportunities for the reader to apply this information. The author describes how becoming an effective string teacher requires three things of equal importance: content knowledge, performance skills, and opportunities to apply the content knowledge and performance skills in a teaching situation. In two parts, the text addresses the unique context that is teaching strings, a practice with its own objectives and related teaching strategies. Part I (Foundations of Teaching and Learning String Instruments) first presents an overview of the string teaching environment, encouraging the reader to consider how context impacts teaching, followed by practical discussions of instrument sizing and position, chapters on the development of each hand, and instruction for best practices concerning tone production, articulation, and bowing guidelines. Part II (Understanding Fingerings) provides clear guidance for understanding basic finger patterns, positions, and the creation of logical fingerings. String fingerings are abstract and thus difficult to negotiate without years of playing experience—these chapters (and their corresponding interactive online tutorials) distill the content knowledge required to understand string fingerings in a way that non-string players can understand and use. Teaching Strings in Today's Classroom contains pedagogical information, performance activities, and an online virtual teaching environment with twelve interactive tutorials, three for each of the four string instruments. Getting Competitive R.C. Bhargava,2020-07-05 The Promise and the Reality Way back in 1947, as India became independent, Prime Minister Jawaharlal Nehru set out a vision to shape the country's economy and the development of a just and equitable society. Manufacturing was key to this vision, since it is crucial to generating employment and higher growth. More than seventy years later, manufacturing is far from competitive and contributes only 15 per cent of the GDP. As a result, removing the wide socio-economic disparities remains a distant dream. In Getting Competitive, R.C. Bhargava draws upon his unique experience of more than sixty years as a policymaker and industry leader to give practical suggestions. These include replacing socialistic industry-related policies with those that would promote competitive manufacturing, and substituting Western management culture with that of the East to create trust with citizens and partnership relations with industrialists, workers and the government. The bureaucracy must be enabled to facilitate and promote competitiveness. Above all, we need to create national acceptance that manufacturing competitiveness is our first priority. For policymakers and general readers alike, this book brings promise to what has become a disappointing scenario.
