This Land, This South Albert E. Cowdrey,2014-07-11 Here is the story of the long interaction between humans, land, and climate in the American South. It is a tale of exploitation and erosion, of destruction, disease, and defeat, but also of the persistent search for knowledge and wisdom. It is a story whose villains were also its victims and sometimes its heroes. Ancient forces created the southern landscape, but, as Albert E. Cowdrey shows, humankind from the time of earliest habitation has been at work reshaping it. The southern Indians, far from being the natural ecologists of myth, radically transformed their environment by hunting and burning. Such patterns were greatly accelerated by the arrival of Europeans, who viewed the land as a commodity to be exploited for immediate economic benefit. Cowdrey documents not only the long decline but the painfully slow struggle to repair the damage of human folly. The eighteenth century saw widespread though ineffectual efforts to protect game and conserve the soil. In the nineteenth century the first hesitant steps were taken toward scientific flood control, forestry, wildlife protection, and improved medicine. In this century, the New Deal, the explosion in scientific knowledge, and the national environmental movement have spurred more rapid improvements. But the efforts to harness the South's great rivers, to save its wild species, and to avert serious environmental pollution have often had equivocal results. Originally published in 1983 and needed now more than ever, *This Land, This South* was the first book to explore the cumulative impact of humans on the southern landscape and its effect on them. In graceful and at times lyrical prose, Albert Cowdrey brings together a vast array of information. Now revised and updated, this important book should be read by every person concerned with the past, present, or future of the South.

The Power of Culture Richard Wightman Fox,T. J. Jackson Lears,1993-04 We are in the midst of a dramatic shift in sensibility, and 'cultural' history is the rubric under which a massive doubting and refiguring of our most cherished historical assumptions is being conducted. Many historians are coming to suspect that the idea of culture has the power to restore order to the study of the past. Whatever its potency as an organizing theme, there is no doubt about the power of the term 'culture' to evoke and stand for the depth of the re-examination not taking place. At a time of deep intellectual disarray, 'culture' offers a provisional, nominalist version of coherence: whatever the fragmentation of knowledge, however centrifugal the spinning of the scholarly wheel, 'culture'—which (even etymologically) conveys a sense of safe nurture, warm growth, budding or ever-present wholeness—will shelter us. The PC buttons on historians' chests today stand not for 'politically correct' but 'positively cultural.'—from the Introduction More and more scholars are turning to cultural history in order to make sense of the American past. This volume brings together nine original essays by some leading practitioners in the field. The essays aim to exhibit the promise of a cultural approach to understanding the range of American experiences from the seventeenth century to the present. Expanding on the editors' pathbreaking *The Culture of Consumption*, the contributors to this volume argue for a cultural history that attends closely to language and textuality without losing sight of broad configurations of power that social and political history at its best has always stressed. The authors here freshly examine crucial topics in both private and public life. Taken together, the essays shed new light on the power of culture in the lives of Americans past and present.

Province of Reason Sam Bass Warner, Jr.,Sam Bass Warner,1988-02 This book sees the sweeping changes of the 20th century through the eyes of 14 Bostonians in an attempt to understand the disorienting experiences of recent history. These lives span the years from 1850 to 1980, a time when American cities were being rebuilt according to the specifications of science, engineering, mass wealth, and big corporations.

Astronomy from Space James Cornell,Paul Gorenstein,1983 Since the Space Age began a quarter-century ago, astronomers have been able to reach out and often touch celestial bodies that formerly could only be dimly viewed from afar. Probes have flown by or landed on many of the planets. Astronauts have made direct observations from Earth orbit and on the Moon. Most important, a host of satellites in Earth orbit have recorded the emissions of X-ray, infrared, and ultraviolet radiation from distant sources normally invisible beneath the atmosphere. And when the Space Telescope goes aloft, man's vision of the cosmos will be extended further still. The essays in this book describe the results of twenty-five years of space observation, summarize what has been learned so far, and speculate on the possibilities that are now within grasp. Leo Goldberg provides a point of departure by describing what astronomy was like when it was limited to peering at the night sky through Earthbound telescopes. Goldberg also expresses the hopes astronomers had for discovery in the anticipated Age of Space. The chapters that follow reveal what has been discovered about the geological features of the inner planets (James W. Head, III), the Moon (John A. Wood), the giant planets as seen during the close encounters of the Voyagers (Bradford A. Smith), and the Sun (Randolph H. Levine). The next chapters document the first ventures into deep space and describe the understanding of a previously invisible universe revealed by ultraviolet sources (Andrea K. Dupree) and X-ray sources within the Milky Way (Jonathan E. Grindlay) and beyond (Paul Gorenstein). George B. Field, who chaired the National Academy of Science committee charged with developing priorities for U.S. astronomical research in the 1980s, discusses the future of space astronomy. An epilogue by Ursula B. Marvin describes a planet body that until recently had never been seen from the vantage point of space: the Earth itself. The editors and most of the contributors are affiliated with the Harvard-Smithsonian Center for Astrophysics. James Cornell also edited, with Alan P. Lightman, *Revealing the Universe: Prediction and Proof in Astronomy* (MIT Press paperback).

TVA and the Dispossessed Michael J. McDonald,John Muldowny,2002-06 One of the most notable agencies of the New Deal era, the Tennessee Valley Authority was created with a warrant to plan for the socioeconomic improvement of forgotten Americans. The construction of the Norris Dam, it was thought, would benefit the region socially as well as economically. This book analyzes and assesses TVA's social experiment in modernization at the grassroots level, using population removal in the Norris Basin as a test case.

Haphazard Reality: Half a Century of Science Hendrik B.G. Casimir,2020-09-23 “An outstanding scientific autobiography... I remain impressed by its thoughtfulness and charm.” — Steve K. Lamoreaux, *American Journal of Physics* “[A] rich autobiography and history-of-atomic-physics... One is impressed by Casimir’s memory for detail and zeal to find corroboration for the stories he tells. And they are splendid tales: Gamow’s playful pranks in Copenhagen: conversations with Lev Landau, ardent revolutionary but no Marxist; the tragedy of Ehrenfest, who killed himself after shooting his hopelessly retarded son... A charming, idiosyncratic, and meaningful account of events and personalities that changed physics.” — Kirkus “I myself read [this book] with fascination, meeting old friends such as Gamow, Landau, Kramers, and learning much more about them... Also in the book are character sketches of those who made physics in the Netherlands such as Lorentz, Kamerlingh Onnes and Ehrenfest, the latter remembered with the greatest affection by the author.” — Sir Nevill Mott, *Contemporary Physics* “The book... contains a valuable, entertaining and insightful collection of vignettes of many of the physicists Casimir has associated with[,]... Lorentz, Ehrenfest, Bohr, Pauli, with whom he studied; Goudsmit, Uhlenbeck, Landau, Gamov, members of his own generation; Kramers, Gorter, de Haas, colleagues in Dutch academic circles; Holst and Loupart, colleagues at the Philips Laboratories. *Haphazard Reality* also offers valuable insights into Dutch middle class culture and a rewarding overview of Dutch educational and scientific establishments... Casimir is a master at deftly and sensitively conveying the psychological ambiance of his surroundings. His description of the brilliant young theoretical physicists around Bohr in the early thirties conveys not only the style of doing physics but also delineates the issues addressed by outlining the content of their researches.” — S. S. Schweber, 45 *Review* “Engaging reminiscences by an important Dutch physicist of conversations with the major contributors to 20th-century physics. An overly modest, but otherwise balanced account of his own experiences and contributions from his early years at Leiden to his directorship of the Philips Laboratory.” — *The Antioch Review* “*Haphazard Reality* paints a vivid and insightful picture of the development of modern physics.” — Steve K. Lamoreaux, *Proceedings of the American Philosophical Society*

Industry and Ethos Olive Checkland,S. G. Checkland,1989 This book celebrates the emergence of the Scots and Scotland from centuries of poverty and backwardness as the nineteenth century saw Scottish locomotives and ships working on land and sea throughout the world, and Scottish technology leading the way. It analyses the ways in which Scots retained their strong sense of national identity despite considerable industrial and social upheaval and asks the question: who are the Scots?

Soviet Aviation And Air Power Robin Higham,Jacob W Kipp,2019-08-20 This book is the story of Russian aviation and Soviet Russia's progress in preparing its strength as an air power. It discusses the Russia-Germany connect post 1919, how Russians gained expertise from German know-how, and post World War II progress from Stalin to Strategic Arms Limitation Talks.

Clockwork Worlds Richard D. Erlich,Thomas P. Dunn,1983-12-28 Taken to extremes, social organization--however necessary in itself--leads to the creation of what editors Erlich and Dunn label Clockwork Worlds. This anthology has been organized to define and expand that concept for the reader. Arthur O. Lewis provides a comprehensive overview of clockwork worlds and sets them in their political and literary contexts. Following Lewis' introduction are two series of essays which show how the theme of mechanized environments has been developed in classic works of dystopian fiction, and how it has been treated by some of the major contemporary science fiction writers. The Special Topics section studies mechanized environments from a variety of viewpoints. The editors have included an extensive list of stories, novels, films, background readings, and other works useful for the study of mechanized environments.
