Stability Domains Lyubomir T. Gruyitch, Jean-Pierre Richard, Pierre Borne, Jean-Claude Gentina, 2003-12-15 *Stability Domains* is an up-to-date account of stability theory with particular emphasis on stability domains. Beyond the fundamental basis of the theory of dynamical systems, it includes recent developments in the classical Lyapunov stability concept, practical stability properties, and a new Lyapunov methodology for nonlinear systems. It also introduces classical Lyapunov and practical stability theory for time-invariant nonlinear systems in general and for complex (interconnected, large scale) nonlinear dynamical systems in particular. This is a complete treatment of the theory of stability domains useful for postgraduates and researchers working in this area of applied mathematics and engineering.

Complementation Kaoru Horie, 2000-01-01 *Complementation*, i.e. predication encoded in argument slots, is well-renowned for its syntactic and semantic variability across languages. As such, it poses a tantalizing descriptive/explanatory challenge to linguists of any theoretical persuasion. Recent developments in Cognitive and Functional-typological linguistics have enabled researchers to address various unexplored research questions on complementation phenomena. The seven papers included in this volume represent the most recent endeavors to explore cognitive-functional foundations of complementation phenomena from various theoretical perspectives (Cognitive Grammar, Mental Space Theory, Typology, Discourse-functional linguistics, Cognitive Science). The seven papers are prefaced by an introductory chapter (Kaoru Horie and Bernard Comrie) which situates the current volume within the major complementation studies of the past forty years. This work presents a new theoretical venue of complementation studies and enhances our understanding of this complex yet intriguing syntactic and semantic phenomenon.

The Oxford Handbook of Grammaticalization Heiko Narrog, Bernd Heine, 2011-10-13 This book presents the state of the art in research on grammaticalization, the process by which lexical items acquire grammatical function, grammatical items get additional functions, and grammars are created. Leading scholars from around the world introduce and discuss the core theoretical and methodological bases of grammaticalization, report on work in the field, and point to promising directions for new research. They represent every relevant theoretical perspective and approach. Research on grammaticalization and its role in linguistic change encompasses work on languages from every major linguistic family. Its results offer valuable insights for all theoretical frameworks, including generative, construction, and cognitive grammar, and relate to work in fields such as phonology, sociolinguistics, and language acquisition. The handbook is divided into five parts, of which the first two are devoted to theory and method, the third and fourth to work in linguistic domains, classes, and categories, and the fifth to case studies of grammaticalization in a range of languages. It will be an indispensable source of information and inspiration for all those who wish to know more about this fascinating and important field.

Handbook of Conformal Mapping with Computer-Aided Visualization Valentin I. Ivanov, Michael K. Trubetskov, 1994-12-16 This book is a guide on conformal mappings, their applications in physics and technology, and their computer-aided visualization. Conformal mapping (CM) is a classical part of complex analysis having numerous applications to mathematical physics. This modern handbook on CM includes recent results such as the classification of all triangles and quadrangles that can be mapped by elementary functions, mappings realized by elliptic integrals and Jacobian elliptic functions, and mappings of doubly connected domains. This handbook considers a wide array of applications, among which are the construction of a Green function for various boundary-value

problems, streaming around airfoils, the impact of a cylinder on the surface of a liquid, and filtration under a dam. With more than 160 domains included in the catalog of mapping, *Handbook of Conformal Mapping with Computer-Aided Visualization* is more complete and useful than any previous volume covering this important topic. The authors have developed an interactive ready-to-use software program for constructing conformal mappings and visualizing plane harmonic vector fields. The book includes a floppy disk for IBM-compatible computers that contains the CONFORM program.

Sampling of Particulate Materials Theory and Practice Pierre Gy, 2012-12-02 *Developments in Geomathematics 4: Sampling of Particulate Materials: Theory and Practice* reviews the theory and practice of sampling particulate solids, such as ores and concentrates. With examples borrowed from the mining, metallurgical, and cement industries, the book examines particulate materials of vegetable and mineral origin, including cereals, oil seeds, sugar beets, granulated drosses or slags, bars, plates, and ingots. Organized into nine parts encompassing 34 chapters, this volume begins with an overview of the theory of sampling and sampling-error generating mechanisms. It then discusses the continuous selection and discrete models of the increment sampling process and the materialization of punctual increments. It explains the splitting process and its practical implementation in sampling. Lot and sample preparation, resolution of sampling problems, and problems associated with commercial sampling are also discussed. The book also describes the detection of measurement or sampling biases and inconspicuous losses of material, and the design of automatic sampling plants. This book is a valuable resource for geologists, mining engineers, metallurgists, and analysts.

Interfacial Instability Lewis E. Johns, Ranga Narayanan, 2007-05-08 Essays are written to fulfill the needs of both teachers and graduate students; Problems have been selected so that they can be solved by hand; Discussion notes are at the end of many of the essays to serve as a basis for discussion; Endnotes provide background information which the reader may need in order to enjoy the essay

Approaches to Grammaticalization Elizabeth Closs Traugott, Bernd Heine, 1991-01-01 The study of grammaticalization raises a number of fundamental theoretical issues pertaining to the relation of langue and parole, creativity and automatic coding, synchrony and diachrony, categoriality and continua, typological characteristics and language-specific forms, etc., and therefore challenges some of the basic tenets of twentieth century linguistics. This two-volume work presents a number of diverse theoretical viewpoints on grammaticalization and gives insights into the genesis, development, and organization of grammatical categories in a number of language world-wide, with particular attention to morphosyntactic and semantic-pragmatic issues. The papers in Volume I are divided into two sections, the first concerned with general method, and the second with issues of directionality. Those in Volume II are divided into five sections: verbal structure, argument structure, subordination, modality, and multiple paths of grammaticalization.

Grammaticalization of the Complex Sentence Zygmunt Frajzyngier, 1996-04-01 The general objective of the study is systematic examination of the processes involved in the formation and evolution of complex sentence constructions in a group of genetically related languages. The Chadic language group, at about 140 languages, constitutes the largest and most diversified branch of the Afroasiatic family. One of the findings of the present work is that languages starting from the same base may develop quite different morphological and syntactic structures. With respect to issues of general linguistic interest, the book deals with motivations for grammaticalization: It is proposed that one of the most important motivations is satisfaction of the principle of well formedness, that is,

that every element in an utterance must have its role transparent to the hearer either by inherent lexical properties or by grammatical means. In the present work both aspects of grammaticalization, viz. the emergence of grammatical constructions and the emergence of grammatical morphemes, are given equal weight. In addition to semantic metaphor and metonymy as mechanisms in the processes of grammaticalization, the present work develops the notion of semiotic metonymy, whereby a part of a sign performs the function of the sign. It is shown that semiotic metonymy plays an important role in the grammaticalization of grammatical morphemes and constructions into other morphemes and constructions. The book also shows that unidirectionality is not a governing principle with respect to the development of grammatical morphemes into other grammatical morphemes; rather, there is considerable evidence and theoretical justification for the bidirectionality principle.

Matrix Metalloproteinase Biology Irit Sagi, Jean Gaffney, 2015-08-03 Discussing recent advances in the field of matrix metalloproteinase (MMP) research from a multidisciplinary perspective, *Matrix Metalloproteinase Biology* is a collection of chapters written by leaders in the field of MMPs. The book focuses on the challenges of understanding the mechanisms substrate degradation by MMPs, as well as how these enzymes are able to degrade large, highly ordered substrates such as collagen. All topics addressed are considered in relation to disease progression including roles in cancer metastasis, rheumatoid arthritis and other inflammatory diseases. The text first provides an overview of MMPs, focusing on the history, the development and failures of small molecule inhibitors in clinical trials, and work with TIMPS, the endogenous inhibitors of MMPs. These introductory chapters establish the foundation for later discussion of the recent progress on the design of different types of inhibitors, including novel antibody based therapeutics. The following section emphasizes research using novel methods to further the study of the MMPs. The third and final section focuses on in vivo research, particularly with respect to cancer models, degradation of the extracellular matrix, and MMP involvement in other disease states. Written and edited by leaders in the field, *Matrix Metalloproteinase Biology* addresses the rapidly growth in MMP research, and will be an invaluable resource to advanced students and researchers studying cell and molecular biology.

Determiners Jila Ghomeshi, Ileana Paul, Martina Wiltschko, 2009-10-28 This volume brings together recent work on the formal and interpretational properties of determiners across a variety of typologically and geographically unrelated languages. It seeks to answer the core question of modern linguistic theory: Which properties of languages are universal and which are variable? In recent theorizing, much of language variation is argued to stem from differences in the properties of features associated with functional heads. As such, this volume can be viewed as a case study of one such category: the determiner (D). The contributions all investigate the status of D as a language universal by examining the language-specific syntactic and semantic properties associated with this category. This volume will appeal to researchers and students in syntax and semantics, as well as to those who have more a specific interest in determiners and noun phrases.

Data Mining John Wang, 2003-01-01 An overview of the multidisciplinary field of data mining, this book focuses specifically on new methodologies and case studies. Included are case studies written by 44 leading scientists and talented young scholars from seven different countries. Topics covered include data mining based on rough sets, the impact of missing data, and mining free text for structure. In addition, the four basic mining operations supported by numerous mining techniques are addressed: predictive model creation supported by supervised induction techniques; link analysis supported by association discovery and sequence discovery techniques; DB segmentation supported by clustering techniques; and deviation detection supported by statistical techniques.

Multimodal Argumentation and Rhetoric in Media Genres Assimakis Tseronis, Charles Forceville, 2017-12-15 This collection advances the study of context-dependent characteristics of argumentative discourse by examining a variety of media genres in which text and image (and other semiotic modes) combine to create meaning. The chapters have been written by an international group of senior and junior scholars researching multimodal argumentation in the last two decades. In each chapter, a specific approach to argumentation and rhetoric is combined with insights from visual studies, metaphor theory, scientific visualization, cognitive science, semiotics, conversation analysis, or (documentary) film theory in order to explain how multimodal genres function argumentatively and rhetorically. Together the chapters present a state-of-the-art in the analysis of multimodal argumentation in such diverse genres as print advertisements, news photographs, scientific illustrations, political cartoons, documentaries, film trailers, political TV advertisements, public debates, and political speeches. The volume will be of interest to advanced students and scholars in argumentation studies, rhetoric, and multimodal communication.
