⬚ **System z Crypto and TKE Update** Karan Singh,Lennie Dymoke-Bradshaw,Pekka Hanninen,Patrick Kappeler,IBM Redbooks,2011-06-20 This IBM® Redbooks® publication provides detailed information about the implementation of hardware cryptography in the System z10® server. We begin by summarizing the history of hardware cryptography on IBM Mainframe servers, introducing the cryptographic support available on the IBM System z10, introducing the Crypto Express3 feature, briefly comparing the functions provided by the hardware and software, and providing a high-level overview of the application programming interfaces available for invoking cryptographic support. This book then provides detailed information about the Crypto Express3 feature, discussing at length its physical design, its function and usage details, the services that it provides, and the API exposed to the programmer. This book also provides significant coverage of the CP Assist for Cryptographic Functions (CPACF). Details on the history and purpose of the CPACF are provided, along with an overview of cryptographic keys and CPACF usage details. A chapter on the configuration of the hardware cryptographic features is provided, which covers topics such as zeroizing domains and security settings. We examine the software support for the cryptographic functions available on the System z10 server. We look at the recent changes in the Integrated Cryptographic Service Facility (ICSF) introduced with level HCR7770 for the z/OS® operating system. A discussion of PKCS#11 support presents an overview of the standard and provides details on configuration and exploitation of PKCS#11 services available on the z/OS operating system. The Trusted Key Entry (TKE) Version 6.0 workstation updates are examined in detail and examples are presented on the configuration, usage, and exploitation of

THE NEW FEATURES. WE DISCUSS THE CRYPTOGRAPHIC SUPPORT AVAILABLE FOR LINUX® ON SYSTEM z®, WITH A FOCUS ON THE SERVICES AVAILABLE THROUGH THE IBM COMMON CRYPTOGRAPHIC ARCHITECTURE (CCA) API. WE ALSO PROVIDE AN OVERVIEW ON ELLIPTICAL CURVE CRYPTOGRAPHY (ECC), ALONG WITH EXAMPLES OF EXPLOITING ECC USING ICSF PKCS#11 SERVICES. SAMPLE REXX AND ASSEMBLER CODE IS PROVIDED THAT DEMONSTRATE THE CAPABILITIES OF CPACF PROTECTED KEYS.

 What It Is to Exist Patrick Zoll,2022-10-24 One important task of metaphysics is to answer the question of what it is for an object to exist. The first part of this book offers a systematic reconstruction and critique of contemporary views on existence. The upshot of this part is that the contemporary debate has reached an impasse because none of the considered views is able to formulate a satisfactory answer to this fundamental metaphysical question. The second part reconstructs Thomas Aquinas's view on existence (esse) and argues that it contributes a new perspective which allows us to see why the contemporary debate has reached this impasse. It has come to this point because it has taken a premise for granted which Aquinas's view rejects, namely, that the existence of an object consists in something's having a property. A decisive contribution of Aquinas's theory of esse is that it makes use of the ideas of metaphysical participation and composition. In this way, it can be explained how an object can have esse without being the case that esse is a property of it. This book brings together a

reconstruction from the history of philosophy with a systematic study on existence and is therefore relevant for scholars interested in contemporary or medieval theories of existence.
