Calvert's Descriptive Phonetics Transcription Workbook, now in a completely revised third edition, provides a wealth of exercises for developing a strong foundation in phonetics. Designed for use alone or with Calvert's Descriptive Phonetics text, this state-of-the-art workbook is packed with narrow transcription practice, lessons on basic consonant and vowel transcription, multiple opportunities to learn IPA symbols, and a CD-ROM of the first ten chapters of exercises, allowing for practice outside the classroom. Special workbook features: Repeated transcription practice- the key to IPA proficiency! A new chapter on thinking in terms of phonemes rather than letters, a common mistake among students. Additional transcription exercises in the chapters on vowel and diphthongs. Discrimination practice that requires a higher level of listening skills and IPA mastery, pushing students to reach their potential! An accompanying CD-ROM for instruction beyond the classroom. Voice Writing Theory Bettye A. Keyes, 2019-10-20

Phonological Parsing in Speech Recognition Kenneth Ward Church, 1987 It is well-known that phonemes have different acoustic realizations depending on the context. Thus, for example, the phoneme /t/ is typically realized with a heavily aspirated strong burst at the beginning of a syllable as in the word Tom, but without a burst at the end of a syllable in a word like cat. Variation such as this is often considered to be problematic for speech recognition: (1) In most systems for sentence recognition, such modifications must be viewed as a kind of 'noise' that makes it more difficult to hypothesize lexical candidates given an input phonetic transcription. To see that this must be the case, we note that each phonological rule [in a certain example] results in irreversible ambiguity—the phonological rule does not have a unique inverse that could be used to recover the underlying phonemic representation for a lexical item. For example, . . . schwa vowels could be the first vowel in a word like 'about' or the surface realization of almost any English vowel appearing in a sufficiently destressed word. The tongue flap [ɾ] could have come from a /t/ or a /d/. [65, pp. 548-549] This view of allophonic variation is representative of much of the speech recognition literature, especially during the late 1970's. One can find similar statements by Cole and Jakimik [22] and by Jelinek [50].
