*The Hunting Farmers: Understanding ancient human subsistence in the central part of the Korean peninsula during the Late Holocene* Seungki Kwak, 2017-09-30 The central hypothesis of this research is that there was a wide range of resource utilization along with rice farming around 3,400-2,600 BP. This hypothesis contrasts with prevailing rice-based models, where climatically driven intensive rice agriculture from 3,400 BP is thought to be the dominant subsistence strategy that drove social complexity.

**Pervasive Communications Handbook** Syed Ijlal Ali Shah, Mohammad Ilyas, Hussein T. Mouftah, 2017-09-29 In an emergency, availability of the pervasive communications environment could mean the difference between life and death. Possibly one of the first guides to comprehensively explore these futuristic omnipresent communications networks, the Pervasive Communications Handbook addresses current technology (i.e., MAC protocols and P2P-based VoD architecture) and developments expected in the very near future, when most people and places will be virtually connected through a constant and perpetual exchange of information. This monumental advance in communications is set to dramatically change daily life, in areas ranging from healthcare, transportation, and education to commerce and socialization. With contributions from dozens of pioneering experts, this important reference discusses one-to-one, one-to-many, and many-to-one exchanges of information. Organized by the three key aspects—technology, architecture, and applications—the book explores enabling technologies, applications and services, location and mobility management, and privacy and trust. Citing the technology's importance to energy distribution, home automation, and telecare among other areas, it delves into topics such as quality of service, security, efficiency, and reliability in mobile network design, and environment

interoperability.

**The Oxygen Evolving System of Photosynthesis** Yorinao Inoue, Norio Murata, Antony R. Crofts, 2014-06-28 The Oxygen Evolving System of Photosynthesis documents the proceedings of an international symposium entitled Photosynthetic Water Oxidation and Photosystem II Photochemistry, held at The Institute of Physical and Chemical Research (RIKEN), Wako, Saitama, Japan, 15-17 March 1983. Several other papers from authorities in this field are also included. This book provides in a systematic fashion the most current thoughts and insights into the field of photosynthetic oxygen evolution. The volume contains 46 chapters organized into five parts. Part I deals with the subunit structure of photosystem II reaction center pigment proteins and the charge separation (generation of positive and negative charges, P680<sup>+</sup> and Pheo<sup>-</sup>). Part II examines the components and their function on the donor side. Part III discusses the biochemistry of the water oxidation enzyme system,

polypeptide composition, and functional reconstitution. Part IV take up the functions of chloride and bicarbonate in electron transport and the mechanism of photoactivation in latent or Tris-inactivated chloroplasts. Part V discusses the fate of reducing equivalents going through the two-electron gate mechanism, together with the biochemistry of the quinone components on the acceptor side.

**Signal Processing in Radar Systems** Vyacheslav Tuzlukov,2017-12-19 An essential task in radar systems is to find an appropriate solution to the problems related to robust signal processing and the definition of signal parameters. Signal Processing in Radar Systems addresses robust signal processing problems in complex radar systems and digital signal processing subsystems. It also tackles the important issue of defining signal parameters. The book presents problems related to traditional methods of synthesis and analysis of the main digital signal processing operations. It also examines problems related to modern methods of robust signal processing in noise, with a focus on the generalized approach to signal processing in noise under coherent filtering. In addition, the book puts forth a new problem statement and new methods to solve problems of adaptation and control by

functioning processes. Taking a systems approach to designing complex radar systems, it offers readers guidance in solving optimization problems. Organized into three parts, the book first discusses the main design principles of the modern robust digital signal processing algorithms used in complex radar systems. The second part covers the main principles of computer system design for these algorithms and provides real-world examples of systems. The third part deals with experimental measurements of the main statistical parameters of stochastic processes. It also defines their estimations for robust signal processing in complex radar systems. Written by an internationally recognized professor and expert in signal processing, this book summarizes investigations carried out over the past 30 years. It supplies practitioners, researchers, and students with general principles for designing the robust digital signal processing algorithms employed by complex radar systems.
