*The Cambridge Handbook of Evolutionary Perspectives on Human Behavior* Lance Workman, Will Reader, Jerome H. Barkow, 2020-03-19 The transformative wave of Darwinian insight continues to expand throughout the human sciences. While still centered on evolution-focused fields such as evolutionary psychology, ethology, and human behavioral ecology, this insight has also influenced cognitive science, neuroscience, feminist discourse, sociocultural anthropology, media studies, and clinical psychology. This handbook's goal is to amplify the wave by bringing together world-leading experts to provide a comprehensive and up-to-date overview of evolution-oriented and influenced fields. While evolutionary psychology remains at the core of the collection, it also covers the history, current standing, debates, and future directions of the panoply of fields entering the Darwinian fold. As such, *The Cambridge Handbook of Evolutionary Perspectives on Human Behavior* is a valuable reference not just for evolutionary psychologists but also for scholars and students from many fields who wish to see how the evolutionary perspective is relevant to their own work.

**Sexual Selection and the Origins of Human Mating Systems** Alan F. Dixson, 2009-05-14 This book demonstrates how detailed comparative analyses of the anatomy, reproductive physiology, and behaviour of non-human primates and other mammals can offer profound insights into the origins of human sexual behaviour.

**Poultry Outlook**, 1994

*How Sexual Desire Works* Frederick Toates, 2014-09-18 Shows how the diversity of sexual desires, both normal and unusual, emerge from the interactions between underlying brain processes.

**Hitler's Ethic** R. Weikart, 2009-07-20 In this book, Weikart helps unlock the mystery of Hitler's evil by vividly demonstrating the surprising conclusion that Hitler's immorality flowed from a coherent ethic. Hitler was inspired by evolutionary ethics to pursue the utopian project of biologically improving the human race.

**Active Collections** Elizabeth Wood, Rainey Tisdale, Trevor Jones, 2017-11-07 In recent years, many museums have implemented sweeping changes in how they engage audiences. However, changes to the field's approaches to collections stewardship have come much more slowly. *Active Collections* critically examines existing approaches to museum collections and explores practical, yet radical, ways that museums can better manage their collections to actively advance their missions. Approaching the question of modern museum collection stewardship from a position of tough love, the authors argue that the museum field risks being constrained by rigid ways of thinking about objects. Examining the field's relationship to objects, artifacts, and specimens, the volume explores the question of stewardship through the dissection of a broad range of issues, including questions of quality over quantity, emotional attachment, dispassionate cataloging, and cognitive biases in curatorship. The essays look to insights from fields as diverse as forest management, library science, and the psychology of compulsive hoarding, to inform and innovate collection practices. Essay contributions come from both experienced museum professionals and scholars from disciplines as diverse as psychology, education, and history. The result is a critical exploration that makes the book essential reading for museum professionals, as well as those in training.

**Knowledge Graphs** Mayank Kejriwal, Craig A. Knoblock, Pedro Szekely, 2021-03-30 A rigorous and comprehensive textbook covering the major approaches to knowledge graphs, an active and interdisciplinary area within artificial intelligence. The field of knowledge graphs, which allows us to model, process, and derive insights from complex real-world data, has emerged as an active and interdisciplinary area of artificial intelligence over the last decade, drawing on such fields as natural language processing, data mining, and the semantic web. Current projects involve predicting cyberattacks, recommending products,

and even gleaning insights from thousands of papers on COVID-19. This textbook offers rigorous and comprehensive coverage of the field. It focuses systematically on the major approaches, both those that have stood the test of time and the latest deep learning methods.

**Stem Cell Biology** Jitka Ourednick,2005 Stem cells have generated considerable interest recently in the scientific, clinical, and public arenas. It is essential that we gain a broader understanding of the factors that regulate the biology of stem cells: their ability for self-renewal, differentiation and plasticity, as well as the differences between embryonic and adult stem cells. To gain a better understanding of how and whether stem cells can be manipulated to replace cells in diseased tissues will depend on gaining a better understanding of their normal developmental properties. This volume offers contributions from numerous interdisciplinary areas bridging biotechnology and biomedical sciences. The ability to isolate and maintain pluripotent stem cells in culture offers exciting possibilities for replacing damaged or diseased organs and tissues. Moreover, stem cells will provide opportunities for major advances in our understanding of fundamental developmental processes.

**Drape Expectations** Karen Rose Smith,2015 Includes recipes and an excerpt from an upcoming novel in the series entitled 'Silence of the lamps.'

*Ergonomics* K. H. E. Kroemer,H. B. Kroemer,Katrin E. Kroemer-Elbert,1994 Written by a practicing ergonomics engineer, this new text explores the why and how of human engineering/ergonomics. It discusses physical as well as mental capacities of the human; considers how to design the work task, tools, the interface with the machine, and safe work procedures; and addresses the issues of cumulative trauma, back problems, design for the handicapped; and more.

**Self and Consciousness** Frank S. Kessel,Pamela M. Cole,Dale L. Johnson,Milton D. Hakel,2014-05-22 This volume contains an array of essays that reflect, and reflect upon, the recent revival of scholarly interest in the self and consciousness. Various relevant issues are addressed in conceptually challenging ways, such as how consciousness and different forms of self-relevant experience develop in infancy and childhood and are related to the acquisition of skill; the role of the self in social development; the phenomenology of being conscious and its metapsychological implications; and the cultural foundations of conceptualizations of consciousness. Written by notable scholars in several areas of psychology, philosophy, cognitive neuroscience, and anthropology, the essays are of interest to readers from a variety of disciplines concerned with central, substantive questions in contemporary social science, and the humanities.

Security and Resilience of Control Systems Hideaki Ishii,Quanyan Zhu,2022-01-22 This book comprises a set of chapters that introduce various topics pertinent to novel approaches towards enhancing cyber-physical measures for increased security and resilience levels in control systems. The unifying theme of these approaches lies in the utilization of knowledge and models of the physical systems, rather than an attempt to reinvigorate conventional IT-based security measures. The contributing authors present perspectives on network security, game theory, and control, as well as views on how these disciplines can be combined to design resilient, safe, and secure control systems. The book explores how attacks in different forms, such as false data injections and denial-of-service can be very harmful, and may not be detected unless the security measures exploit the physical models. Several applications are discussed, power systems being considered most thoroughly. Because of its interdisciplinary nature—techniques from systems control, game theory, signal processing and computer science all make contributions—Security and Resilience of Control Systems will be of interest to academics, practitioners and graduate students with a broad spectrum of interests.

**Edward Gibbon and Empire** Rosamond McKitterick,Roland Quinault,2002-07-18 This

book examines Gibbon's interpretations of empire and the intellectual context in which he formulated them against a background of the eighteenth- and late twentieth-century knowledge of late antiquity and the Middle Ages. Gibbon's ideas of empire, his understanding of monarchy and the balance of power, his sources and working methods, the structure of the History of the Decline and Fall of the Roman Empire, his attitude towards the barbarians, the contrasting treatments of the eastern and western Empire, his appreciation of past civilizations and their material remains, his audience and their reactions - contemporary and Victorian - are considered in the light of the latest research on eighteenth-century intellectual history on the one hand and on late antiquity, Byzantium and the Middle Ages on the other. The book breaks new ground in taking the form of a dialogue between experts on the fields about which Gibbon himself wrote, and eighteenth-century intellectual historians.

Document Analysis and Recognition – ICDAR 2021 Josep Lladós,Daniel Lopresti,Seiichi Uchida,2021-09-04 This four-volume set of LNCS 12821, LNCS 12822, LNCS 12823 and LNCS 12824, constitutes the refereed proceedings of the 16th International Conference on Document Analysis and Recognition, ICDAR 2021, held in Lausanne, Switzerland in September 2021. The 182 full papers were carefully reviewed and selected from 340 submissions, and are presented with 13 competition reports. The papers are organized into the following topical sections: extracting document semantics, text and symbol recognition, document analysis systems, office automation, signature verification, document forensics and provenance analysis, pen-based document analysis, human document interaction, document synthesis, and graphs recognition.

Transform Your Life Cheri Huber,2007-08 Chosen for impact, clarity, and humor, these one-per-day quotations come from a wide variety of sources: Zen masters; Christian and Sufi mystics; Eastern and Western philosophers; poets ancient and modern; and living artists, writers, and comedians. Each entry also contains a question to prompt self-examination, making the calendar a year-long course in fending off destructive thoughts and finding inner certainty.

2021 IEEE High Performance Extreme Computing Conference (HPEC) IEEE Staff,2021-09-20 This conference will give researchers from academia, industry, and government working in this important area an opportunity to discuss techniques, approaches, and ongoing developments with relevance to high performance extreme computing processors, systems, storage, networks, software, and applications

**Handbook of Computational Social Science, Volume 2** Uwe Engel,Anabel Quan-Haase,Sunny Xun Liu,Lars Lyberg,2021-11-10 The Handbook of Computational Social Science is a comprehensive reference source for scholars across multiple disciplines. It outlines key debates in the field, showcasing novel statistical modeling and machine learning methods, and draws from specific case studies to demonstrate the opportunities and challenges in CSS approaches. The Handbook is divided into two volumes written by outstanding, internationally renowned scholars in the field. This second volume focuses on foundations and advances in data science, statistical modeling, and machine learning. It covers a range of key issues, including the management of big data in terms of record linkage, streaming, and missing data. Machine learning, agent-based and statistical modeling, as well as data quality in relation to digital trace and textual data, as well as probability, non-probability, and crowdsourced samples represent further foci. The volume not only makes major contributions to the consolidation of this growing research field, but also encourages growth into new directions. With its broad coverage of perspectives (theoretical, methodological, computational), international scope, and interdisciplinary approach, this important resource is integral reading for advanced undergraduates, postgraduates, and researchers engaging with computational methods across the social

sciences, as well as those within the scientific and engineering sectors.

*Transfer Learning Through Embedding Spaces* Mohammed Rostami, 2023-06-26 Recent progress in artificial intelligence (AI) has revolutionized our everyday life. Many AI algorithms have reached human-level performance and AI agents are replacing humans in most professions. It is predicted that this trend will continue and 30% of work activities in 60% of current occupations will be automated. This success, however, is conditioned on availability of huge annotated datasets to training AI models. Data annotation is a time-consuming and expensive task which still is being performed by human workers. Learning efficiently from less data is a next step for making AI more similar to natural intelligence. Transfer learning has been suggested a remedy to relax the need for data annotation. The core idea in transfer learning is to transfer knowledge across similar tasks and use similarities and previously learned knowledge to learn more efficiently. In this book, we provide a brief background on transfer learning and then focus on the idea of transferring knowledge through intermediate embedding spaces. The idea is to couple and relate different learning through embedding spaces that encode task-level relations and similarities. We cover various machine learning scenarios and demonstrate that this idea can be used to overcome challenges of zero-shot learning, few-shot learning, domain adaptation, continual learning, lifelong learning, and collaborative learning.

**Introduction to AutoCAD Plant 3D 2021** Tutorial Books, 2020-10-15 Introduction to AutoCAD Plant 3D 2021 is a learn-by-doing manual focused on the basics of AutoCAD Plant 3D.
