Digital Humanities for Librarians Emma Annette Wilson, 2020-01-15 Digital Humanities For Librarians. Some librarians are born to digital humanities; some aspire to digital humanities; and some have digital humanities thrust upon them. Digital Humanities For Librarians is a one-stop resource for librarians and LIS students working in this growing new area of academic librarianship. The book begins by introducing digital humanities, addressing key questions such as, "What is it?", "Who does it?", "How do they do it?", "Why do they do it?", and "How can I do it?". This broad overview is followed by a series of practical chapters answering those questions with step-by-step approaches to both the digital and the human elements of digital humanities librarianship. Digital Humanities For Librarians covers a wide range of technologies currently used in the field, from creating digital exhibits, archives, and databases, to digital mapping, text encoding, and computational text analysis (big data for the humanities). However, the book never loses sight of the all-important human component to digital humanities work, and culminates in a series of chapters on management and personnel strategies in this area. These chapters walk readers through approaches to project management, effective collaboration, outreach, the reference interview for digital humanities, sustainability, and data management, making this a valuable resource for administrators as well as librarians directly involved in digital humanities work. There is also a consideration of budgeting questions, including strategies for supporting digital humanities work on a shoestring. Special features include: Case studies of a wide range of projects and management issues Digital instructional documents guiding readers through specific digital technologies and techniques An accompanying website featuring digital humanities tools and resources and digital interviews with librarians and scholars leading the way in digital humanities work across North America, from a range of larger and smaller institutions Whether you are a librarian primarily working in digital humanities for the first time, a student hoping to do so, or a librarian in a cognate area newly-charged with these responsibilities, Digital Humanities For Librarians will be with you every step of the way, drawing on the author's experiences and those of a network of librarians and scholars to give you the practical support and guidance needed to bring your digital humanities initiatives to life.

The TVs of Tomorrow Benjamin Gross,2018-03-22 In 1968 a team of scientists and engineers from RCA announced the

creation of a new form of electronic display that relied upon an obscure set of materials known as liquid crystals. At a time when televisions utilized bulky cathode ray tubes to produce an image, these researchers demonstrated how liquid crystals could electronically control the passage of light. One day, they predicted, liquid crystal displays would find a home in clocks, calculators—and maybe even a television that could hang on the wall. Half a century later, RCA's dreams have become a reality, and liquid crystals are the basis of a multibillion-dollar global industry. Yet the company responsible for producing the first LCDs was unable to capitalize upon its invention. In *The TVs of Tomorrow*, Benjamin Gross explains this contradiction by examining the history of flat-panel display research at RCA from the perspective of the chemists, physicists, electrical engineers, and technicians at the company's central laboratory in Princeton, New Jersey. Drawing upon laboratory notebooks, internal reports, and interviews with key participants, Gross reconstructs the development of the LCD and situates it alongside other efforts to create a thin, lightweight replacement for the television picture tube. He shows how RCA researchers mobilized their technical expertise to secure support for their projects. He also highlights the challenges associated with the commercialization of liquid crystals at RCA and Optel—the RCA spin-off that ultimately manufactured the first LCD wristwatch. *The TVs of Tomorrow* is a detailed portrait of American innovation during the Cold War, which confirms that success in the electronics industry hinges upon input from both the laboratory and the boardroom.

Internet Access Tax Moratorium James R. White (au), 2006-08 Over 70 million U.S. adults log on to access the Internet during a typical day. As public use of the Internet grew from the mid-1990s onward, Internet access became a potential target for state & local taxation. In 1998, Congress imposed a moratorium temporarily

preventing state & local governments from imposing new taxes on Internet access. This report determines the scope of the moratorium & its impact, if any, on state & local revenues. It reviewed the moratorium's language, its legislative history, & associated legal issues; examined studies of revenue impact; interviewed people knowledgeable about access services; & collected info. about 8 case study states not intended to be representative of other states.
