Telecoms in the Internet Age Martin Fransman,2002 The telecoms industry is one of the most important in the global economy. Without it the Internet and Information Society would not exist. But how does it work? How has it been changed by the Internet? Why was $2,500 billion wiped off its stock market value in 2000/1? How have its incumbentoperators (such as ATandT, BT, Deutsche Telekom, France Telecom, and NTT) and their aggressive rivals (for example WorldCom, Qwest, and COLT) adjusted to the radical changes sweeping the industry? Why has Japan succeeded but Europe failed in creating the latest incarnation of the industry, themobile Internet? These are some of the key questions analysed. The book begins with an explanation of the telecoms boom and bust, 1996-2002. It tackes the questions regarding who was to blame and why, and also examines the consequences of the bust. An analytical framework is created to understand the main forces driving the telecoms industry as it istransformed by the Internet into the infocommunications industry. It is shown that knowledge in its various manifestations and changes in knowledge are responsible for the key changes that have taken place. The foundation of the infocommunications industry comprises a combination of specialist technology suppliers (such as Cisco, Nokia, NEC, and Nortel) and network operators. Their changing relationship lies at the heart of the forces driving the industry. The author looks at how these changes haveaffected the struggles of the incumbent network operators and their new entrant rivals. He also analyses some of the main new entrpreneurs in the industry, looking at why they managed to enter so successfully, what has become of them, and why. The continuing changes in the knowledge base of theindustry are examined, as are some of the latest developments in the mobile Internet. Finally, the future of the industry is confronted. The book is complemented by the interactive web site: www.TelecomVisions.com
