**Vegetation Structure and Function at Multiple Spatial,
Temporal and Conceptual Scales** Elgene Owen Box, 2016-03-17

This commemorative volume of invited papers in vegetation science covers a full range of topics, objectives, methods and applications, including conservation and management tasks. These require study at different temporal and spatial scales, often simultaneously. Methodology is important in science, since it responds to particular questions and raises others. It is also closely related to the scale of investigation. Chapters in this book illustrate this interdependence, even in basic tasks such as vegetation sampling and description, measurements and mapping. Individual chapters present globally applicable systems, regional syntheses and local analyses and applications, plus conceptual methodologies, including currently debated hot topics. Vegetation types treated include tropical rainforests, temperate forests, dry steppes and scrub and local turf, sedge and moss communities. There are also chapters on re-vegetation, woodlot management, ecology of an invasive species, and trajectory planning in conservation. This book will be useful to both students and practitioners, for its reviews and examples and as a potential

textbook suitable for graduate-level courses and seminars.

Crimes of the Powerful Dawn Rothe, David Kauzlarich, 2016-03-31 As politicians and the media perpetuate the stereotype of the common criminal, crimes committed by the powerful remain for the most part invisible, or are reframed as a bad decision or a rare mistake. This is a topic that remains marginalized within the field of criminology and criminal justice, yet crimes of the powerful cause more harm, perpetuate more inequalities, and result in more victimization than street crimes. *Crimes of the Powerful: An introduction* is the first textbook to bring together and show the symbiotic relationships between the related fields of state crime, white-collar crime, corporate crime, financial crime, organized crime, and environmental crime. Dawn L. Rothe and David Kauzlarich introduce the many types of crimes, methodological issues associated with research, theoretical relevance, and issues surrounding regulations and social controls for crimes of the powerful. Themes covered include: media, culture, and the Hollywoodization of crimes of the powerful; theoretical

understanding and the study of the crimes of the powerful; a typology of crimes of the powerful with examples and case studies; victims of the crimes of the powerful; the regulation and resistance of elite crime. An ideal introductory text for both undergraduate and postgraduate students taking modules on the crimes of the powerful, white-collar crime, state crime, and green criminology, this text includes chapter summaries, activities and discussion questions, and lists of additional resources including films, websites, and additional readings.

Nanolithography M Feldman, 2014-02-13 Integrated circuits, and devices fabricated using the techniques developed for integrated circuits, have steadily gotten smaller, more complex, and more powerful. The rate of shrinking is astonishing – some components are now just a few dozen atoms wide. This book attempts to answer the questions, “What comes next? and “How do we get there? Nanolithography outlines the present state of the art in lithographic techniques, including optical projection in both deep and extreme ultraviolet, electron and ion beams, and imprinting. Special attention is paid to related issues, such as the resists used in lithography, the masks (or lack thereof), the metrology needed for nano-features, modeling, and the limitations

caused by feature edge roughness. In addition emerging technologies are described, including the directed assembly of wafer features, nanostructures and devices, nano-photonics, and nano-fluidics. This book is intended as a guide to the researcher new to this field, reading related journals or facing the complexities of a technical conference. Its goal is to give enough background information to enable such a researcher to understand, and appreciate, new developments in nanolithography, and to go on to make advances of his/her own. Outlines the current state of the art in alternative nanolithography technologies in order to cope with the future reduction in size of semiconductor chips to nanoscale dimensions Covers lithographic techniques, including optical projection, extreme ultraviolet (EUV), nanoimprint, electron beam and ion beam lithography Describes the emerging applications of nanolithography in nanoelectronics, nanophotonics and microfluidics

Bistatic SAR / GISAR / FISAR Geometry, Signal Models and Imaging Algorithms Andon Dimitrov Lazarov, Todor Pavlov Kostadinov, 2014-01-07 Bistatic radar consists of a radar system which comprises a transmitter and receiver which are separated by a distance comparable to the expected target distance. This book provides a general theoretical description of such bistatic technology in the context of synthetic aperture, inverse synthetic aperture and forward scattering radars from the point of view of analytical geometrical and signal formation as well as processing theory. Signal formation and image reconstruction algorithms are developed with the application of high informative linear frequency and phase code modulating techniques, and numerical experiments

that confirm theoretical models are carried out. The authors suggest the program implementation of developed algorithms. A theoretical summary of the latest results in the field of bistatic radars is provided, before applying an analytical geometrical description of scenarios of bistatic synthetic aperture, inverse synthetic aperture and forward scattering radars with cooperative and non-cooperative transmitters. Signal models with linear frequency and phase code modulation are developed, and special phase modulations with C/A (coarse acquisition) and P (precision) of GPS satellite transmitters are considered. The authors suggest Matlab implementations of all geometrical models and signal formation and processing algorithms. Contents 1. Bistatic Synthetic Aperture Radar (BSAR) Survey. 2. BSAR Geometry. 3. BSAR Waveforms and Signal Models. 4. BSAR Image Reconstruction Algorithms. 5. Analytical Geometrical Determination of BSAR Resolution. 6. BSAR Experimental Results. 7. BSAR Matlab Implementation. A general theoretical description of bistatic technology within the scope of synthetic aperture, inverse synthetic aperture and forward scattering radars from the point of view of analytical geometrical and signal formation and processing theory. Signal formation and image reconstruction algorithms are

developed in this title, with application of high informative linear frequency and phase code modulating techniques. Numerical experiments that confirm theoretical models are carried out and the authors suggest program implementation for the algorithms developed.

POP #4 Curt Pires, 2014-08-27 Captured within the Cartel's lair, Elle and Coop fight for their minds, bodies, and souls! Can they escape and take down the Cartel as their diabolical reach extends farther than anyone could have imagined? Can Elle transcend her programming? Can you? Find out in the explosive final issue of *_POP_!* **DEATH IN STEREO!** Original, exciting, and impossible to ignore! Reading this book is a little scary. Scary, because it's so honest and raw and it hits really close to home. For me, and for others that feel what Coop is feeling, this book is a terrifying and poignant meditation on our own lives through the fantastical scope of other's. That's exactly what makes it so good though, you can tell that Pires and Copland are putting themselves into this, you almost feel like you know them, and that's so deeply

rewarding and touching that I come back time and time again for Pop. I'm sad that it's ending soon, but I'm happy that I experienced it at all. □ Comics the Gathering

The Adam and Eve Story Chan Thomas,1993 This is the Book of the Century! At LAST someone - this time a basic research scientist - has come forth with proof of cataclysms, which are worldwide supersonic inundations such as Noah's flood. They were discovered by great men such as Andre DeLuc, Baron Georges Cuvier and Guy de Dolomieu, and have remained unsolved mysteries ever since. Now the author takes you through thrilling solutions of finding the process of catclysms, their timetable, and the derivation of trigger, a 20-year search. Truly, CATACLYSMS LEAVE NO ONE UNTOUCHED! He describes the next cataclysm in awesome detail plus the deterioration of civilization and the escalation of crime before the next cataclysm. It just so happens that the author's scientific prediction of the next cataclysm agrees with clairvoyants Nostradamus', Cayce's, and Scallion's predictions. Never before have facts been presented in such a spine-tingling, inspiring fashion; and never have so many secrets been unlocked in one book.
