**Post Wall, Post Square** Kristina Spohr,2020-03-24 A landmark global history that makes us rethink how the Cold War ended and our present era was born This book offers a bold new interpretation of the revolutions of 1989, showing how a new world order was forged—without major conflict. Based on extensive archival research, Kristina Spohr attributes this in large measure to determined diplomacy by a handful of international leaders, who engaged in tough but cooperative negotiation to reinvent the institutions of the Cold War. She offers a major reappraisal of George H. W. Bush and innovative assessments of Mikhail Gorbachev and Helmut Kohl, as well as Margaret

Thatcher and François Mitterrand. But, she argues, Europe's transformation must be understood in global context. By contrasting events in Berlin and Moscow with the brutal suppression of the pro-democracy movement in Beijing, the book reveals how Deng Xiaoping pushed through China's very different Communist reinvention. Here is an authoritative yet highly readable exploration of the crucial hinge years of 1989–1992 and their consequences for today's world.

**Entangled Knowledge** Klaus Hock, Gesa Mackenthun, 2012 The intimate relationship between global European expansion since the early modern period and the concurrent beginnings of the scientific revolution has long been acknowledged. The contributions in this volume approach the entanglement of science and cultural encounters - many of them in colonial settings - from a variety of perspectives. Historical and historiographical survey essays sketch a transcultural history of knowledge and conduct a critical dialogue between the recent academic fields of Postcolonial Studies and Science & Empire Studies; a series of case studies explores the topos of Europe's 'great inventions', the scientific exploitation of culturally unfamiliar people and objects, the representation of indigenous cultures in discourses of geographical exploration, as well as non-European scientific practices. 'Entangled Knowledges' also refers to the critical practices of scholarship: various essays investigate scholarship's own failures in self-reflexivity, arising from an uncritical appropriation of cultural stereotypes and colonial myths, of which the discourse of Orientalism in historiography and residual racist assumptions in modern genetics serve as examples. The volume thus contributes to the study of cultural and colonial relations as well as to the history of science and scholarship.
