Managing QoS in Multimedia Networks and Services José Neuman de Souza, Raouf Boutaba, 2013-04-17 Welcome to the third International Conference on Management of Multimedia Networks and Services (MMNS'2000) in Fortaleza (Brazil)! The first MMNS was held in Montreal (Canada) in July 1997 and the second MMNS was held in Versailles (France) in November 1998. The MMNS conference takes place every year and a half and is aimed to be a truly international event by bringing together researchers and practitioners from all around the world and by organising the conference each time in a different continent/country. Over the past several years, there has been a considerable amount of research within the fields of multimedia networking and network management. Much of that work has taken place within the context of managing Quality-of Service in broadband integrated services digital networks such as the ATM, and more recently in IP-based networks, to respond to the requirements of emerging multimedia applications. ATM networks were designed to support multimedia traffic with diverse characteristics and can be used as the transfer mode for both wired and wireless networks. A new set of Internet protocols is being developed to provide better quality of service, which is a prerequisite for supporting multimedia applications. Multimedia applications have a different set of requirements, which impacts the design of the underlying communication network as well as its management. Several QoS management mechanisms intervening at different layers of the communication network are required including QoS-routing, QoS-based transport, QoS negotiation, QoS adaptation, FCAPS management, and mobility management.

Eco-Management Accounting Matteo Bartolomeo, M.D. Bennett, J.J. Bouma, Peter Heydkamp, Peter James, F.B. de Walle, T.J. Wolters, 2013-03-09 The ECOMAC project (Eco-management Accounting as a Tool of Environmental Management) has provided a framework for linking environmental management with management accounting. It was funded in Theme 4, 'Human Dimensions of Environmental Change' in the EU Environment and Climate Research Programme. The project is of high policy relevance by contributing to the on-going debate on eco management accounting, reporting and indicators. It is also an area needing further research. I would like to thank the research team, companies that participated as associated contractors, and the advisory panel. Jonathan Parker DG XII/D-5, European Commission Theme on Human Dimensions of Environmental Change 7 Preface The ECOMAC project This document is the final report on the project 'Eco-management accounting as a tool of environmental management (ECOMAC). This research project was conducted under the Environment and Climate Programme (Human Dimension of Environmental Change) of the European Commission (DG XII). The ECOMAC project investigated how companies are using or intend to use environmental costs and benefits figures in support of their decisions, and what they have been doing to remedy the limitations of conventional management accounting in this area. The research was largely explorative in nature, but the project also produced a structured overview of the subject and made suggestions and recommendations as to how companies could improve their own environmental accounting.

Eco-efficiency, Regulation, and Sustainable Business Raimund Bleischwitz, Peter Hennicke, 2004-01-01 This book presents important new research on applied eco-efficiency concepts throughout Europe. The aim of eco-efficiency is

to achieve market-based measures of environmental protection, in order to enhance the prospects for sustainable development and achieve positive economic and ecological benefits. The distinguished authors discuss a number of themes surrounding eco-efficiency including the necessary conditions for technological dissemination and ecological modernization, and the role of government in enabling businesses and society to participate actively in this process. In particular, they highlight the application of existing European-based policies concerning material flows and energy. The authors also investigate some new concepts of sustainable development and provide a useful introduction to material flows analysis. In further chapters they study the emerging regulatory policies for eco-efficiency, and examine the issues of sustainable business and consumption strategies. Environmental and ecological economists, policymakers and political scientists will welcome this original and insightful book which aims to translate the theory of sustainable development into practical policy and business-related solutions.

Implementing Safety Management Systems in Aviation Alan J. Stolzer, Carl Halford, John J. Goglia, 2016-05-13 The International Civil Aviation Organization has mandated that all of its member states implement Safety Management Systems (SMS) in their aviation industries. Responding to that call, many countries are now in various stages of SMS development, implementation, and rulemaking. In their first book, *Safety Management Systems in Aviation*, Stolzer, Halford, and Goglia provided a strong theoretical framework for SMS, along with a brief discourse on SMS implementation. This follow-up book provides a very brief overview of SMS and offers significant guidance and best practices on implementing SMS programs. Very specific guidance is provided by industry experts from government, industry, academia, and consulting, who share their invaluable insights from first-hand experience of all aspects of effective SMS programs. The contributing authors come from all facets of aviation, including regulation and oversight, airline, general aviation, military, airport, maintenance, and industrial safety. Chapters address important topics such as how to develop a system description and perform task analyses, perspectives on data sharing, strategies for gaining management support, establishing a safety culture, approaches to auditing, integrating emergency planning and SMS, and more. Also included is a fictional narrative/story that can be used as a case study on SMS implementation. *Implementing Safety Management Systems in Aviation* is written for safety professionals and students alike.

Eco-industrial Strategies Edward Cohen-Rosenthal, Judy Musnikow, 2017-09-29 Old-style manufacturing, embodied in industrial parks that litter the landscape, may soon become dinosaurs of industrial development. These Jurassic Parks of the past will be replaced by new eco-industrial parks (EIPs) that link manufacturers more closely together into an industrial ecosystem for business and environmental excellence. Companies have always depended on a larger ecology of suppliers, customers, geography and market to be successful, but a popular mythology was that each company was an island. Abandoning this fantasy by consciously integrating into a larger industrial ecology is smart business that draws on the overall system of interactions to nourish corporate success-and the environment. Eco-industrial development, born from the realisation that the places where we work waste too much and unnecessarily pollute the land, air, and water, simply stated, demands a better way of working. From eco-parks-

most famously at Kalundborg in Denmark-to virtual networks, this progressive perspective on economic development is taking shape in communities across the United States and around the world. Eco-industrial Strategies is edited by Ed Cohen-Rosenthal, a pioneer in the field of industrial ecology, whose untimely passing early in 2002 has left this book as a legacy to his passion and commitment to improving both the environment and places in which people work. The book explores the key issues involved in eco-industrial development and identifies the stakeholders and their roles in such projects. In addition, it offers a compendium of eco-industrial development case studies. While an increasing number of handbooks and manuals focus on eco-industrial development, no other book containing process analysis, a breakdown of stakeholder responsibility, and case study assessment exists. What sets this work apart is the pooling together of resources and knowledge from a wide array of sources within the eco-industrial field and the framing of the concept from multiple angles. Eco-industrial Strategies aims to accomplish a two-step inform and empower process. First, it familiarises readers with eco-industrial development, its innovative proclivity and applicability to diverse circumstances. Second, it provides the fundamental tools and motivational creativity to implement independent eco-industrial projects. The introductory chapters of this book present several overarching concepts and perspectives of the field, which pay particular attention to the technological, economic and social elements. The next section focuses on the role of the various stakeholders involved in eco-industrial development. Each chapter sets out to answer various questions relating to the stakeholders' place in the system, specifically: what are the stakeholders' particular interests, in what ways can they participate in the process, and how do they relate to other actors and stakeholders? These chapters also respond to questions regarding the relationship between stakeholders and eco-industrial development. Chiefly, they trace the flow of benefits, and various other impacts and repercussions, among and between the stakeholders and the development project. Since eco-industrial development involves countless groups and individuals, this book focuses on five distinct and comprehensive categories: namely, central government, local government, surrounding community, development community, and energy resources. The third section outlines several matters related to conceptualisation, design, operation and assessment of eco-industrial projects. Concentrating on the core legal, environmental, management, financial, real estate and evaluative aspects, the book presents the critical components of each issue and also provides an understanding of the unique attributes eco-industrial development brings to the equation. The case-study portion of this book provides vignettes of actual work in progress. Each chapter details the key characteristics of the effort and the process undertaken in developing the eco-industrial project. The studies focus primarily on issues considered in the preceding sections, such as project funding, stakeholder engagement and environmental stewardship. In addition, they recount achievements, threats to success, ways obstacles were overcome, and details on the project's future. Eco-industrial Strategies showcases development projects from around the world, including Asia, Canada, Denmark and the United States, situated in a variety of settings: for example, army bases, industrial parks and virtual networks. This eclectic mix of development structures and contexts is indicative of the diversity apparent in eco-industrial projects overall and allows

readers to glean functional and constructive lessons adaptable to their particular circumstances. Accordingly, this section stands as a testament to the widespread applicability of eco-industrial development, and as inspiration for practitioners in both traditional and unconventional settings. An idea and practice still in its infancy, eco-industrial development will undergo many evolutions beyond what this collaborative work is able to capture. As a document of the concept's earliest theorists, *Eco-industrial Strategies* provides current and future readership with an understanding of eco-industrial development's foundations, its beginnings and its aspirations. Most excitingly, policy-makers, industry professionals, community developers, grass-roots activists, and all other readers yearning for a better way to work and live, will experience a glimpse of the thoughts, concerns, ambitions, technological insight, communities and economies that embody eco-industrial development.

Eco-Innovation Javier Carrillo-Hermosilla, P. del Río González, Totti Könnölä, Pablo del Río González, 2009-08-28 *Eco-Innovation* considers the impact industry has on our environmental surroundings whilst exploring the need for more sustainable development. The concept of sustainable development and the general understanding of the interdependence of the environment and the economy are both examined in this thought-provoking new book.

Leading Edge Research in Cognitive Psychology Alexandra Columbus, 2006 Cognitive psychology deals with information processing, and includes a variety of thinking processes including perception, attention, memory, knowledge representation, categorisation, language, problem-solving, reasoning, and judgement. It is also concerned with the structures and representations involved in cognition. Cognitive psychology has significant applications of all areas of human endeavour. It is also the subject of intensive study when applied to health and ageing in the absence of a significant health problem as well as education and human-computer interaction. Other examples are eyewitness memory, autobiographical memory, spatial cognition, skill training, suggestibility, expertise and skilled behaviour.

Integral Sustainable Design Mark DeKay, 2012-08-21 This book offers practical and theoretical tools for more effective sustainable design solutions and for communicating sustainable design ideas to today's diverse stakeholders. It uses Integral Theory to make sense of the many competing ideas in this area and offers a powerful conceptual framework for sustainable designers through the four main perspectives of: Behaviours, Systems, Experiences and Cultures. It also uses human developmental theory to reframe sustainable design across four levels of complexity present in society: the Traditional, Modern, Postmodern, and Integral waves. Profuse with illustrations and examples, the book offers many conceptual tools including: - Twelve Principles of Integral

An Introduction to Corporate Environmental Management Stefan Schaltegger, Roger Burritt, Holger Petersen, 2017-09-08 This book is designed to meet the urgent need for a comprehensive and definitive introduction and teaching text on corporate environmental management. It aims to become the standard textbook for courses examining how business can take the environment into account while also providing an accessible and thorough overview of this increasingly multidisciplinary subject for practitioners. Written by the internationally acknowledged experts Stefan Schaltegger and Roger Burritt (authors of the highly influential Contemporary Environmental Accounting) along with Holger Petersen, the book invites the reader to join in an exploration of the ways in which companies can engage in environmental management and why such engagement can be profitable for business. The reader is invited to: examine whether the contents reflect their own experience, takes their experience further, or opposes their own views; note which of the ideas presented are especially important, add to those ideas, or encourage a reaction (positive or negative); answer questions creatively (based on their own perspective of the issues); encourage themselves to be inspired by questions, which can be investigated further through other written sources of information, such as books you will be guided to through the bibliography, the Internet or the general media; and think about and plan the ways in which the knowledge provided can be implemented in your own situation. The book is organised into four main sections. First, the fundamental ideas and linkages behind business management, the environment and sustainable development are briefly but clearly sketched. The second part of the book outlines the criteria against which environmentally oriented business management can be assessed and the fields of action in which success can be achieved. The third part presents a discussion and examples of strategies for environmental management, which are linked, in the fourth part, to the essential tools of environmental management, especially green marketing, environmental accounting and eco-control. The book is full of case studies and examples related to the main contents of each chapter and each chapter provides a number of questions for the student or reader to address. An Introduction to Corporate Environmental Management is both a textbook and a sourcebook. The reader can either work through the material in a structured way or dip into the content and follow up on specific areas of interest. The materials are designed to be used for understanding and reference, rather than to be learned by heart. The primary aim is for the reader to obtain a practical understanding of the relationship between management and environmental issues which can be applied in day-to-day situations-whether as part of a student's wider view of management or within the practitioner's real-world situation. It will be essential reading for many years to come.

Life Cycle Assessment (LCA) – Quo vadis? S. Schaltegger, 1996-08-28 LCA - Quo vadis? discusses overarching topics, new developments and major problems of Life Cycle Assessment (LCA), and compares LCA with site-specific environmental management. The text profits from two years of interdisciplinary, coordinated research activities of the Priority Programme Environment of the Swiss National Science Foundation. How should system boundaries of a

product life cycle be drawn? · How can environmental interventions be allocated to products? · How are background inventory data collected and used? · How can imprecision in the LCA method be ascertained and checked? · How can relevant environmental interventions be distinguished from irrelevant ones? · What requirements should a software tool for LCA meet?§ A concept of site-specific LCA is proposed in response to criticism of the current approach of LCA. Furthermore, managerial eco-controlling - the emerging method of site-specific environmental management - is discussed. The book concludes with an outlook of possible paths in the future development of LCA.

Green Growth: Managing the Transition to a Sustainable Economy Diego A. Vazquez-Brust,Joseph Sarkis,2012-05-24 This volume is a practical guide that helps the reader build a quick, evidence-based understanding of green-growth strategies and challenges. Its cogent analysis of real-life case studies enables policy makers and company executives identify successful strategies they can adopt, and pitfalls they can avoid, in drafting and implementing green growth policies. The contributors' empirical assessment of these studies identifies the structural conditions required for economic growth to be compatible with environmental sustainability and how the transition to a new economic paradigm should be managed. A crucial addition to the debate now beginning in earnest around the world, this volume attempts to understand how we can nurture a new-born model of sustainable growth and help it evolve to maturity.

Environmental Management of the Media Pietari Kääpä,2018-05-23 In recent years the widely held misconception of the media as an 'ephemeral' industry has been challenged by research on the industry's significant material footprint. Despite this material turn, no systematic study of this sector has been conducted in ways that considers the role of the media industries as consumers and users of a range of natural resources. Filling this gap, *Environmental Management of the Media* discusses the environmental management of the media industries in the UK and the Nordic countries. These Nordic countries, both as a set of small nations and as a regional constellation, are frequently perceived as some of the 'greenest' in the world, yet, not only is the footprint of the media industries practically ignored in academic research, but the very real stakes of the industries' global impact are not comprehensively understood. Here, the author focuses on four key areas for investigating the material impact of Nordic media: (1) resources used for production and dissemination; (2) regulation of the media; (3) organizational management; and (4) labour practices. By adopting an interdisciplinary perspective that combines ecocritical analysis with interrogation of the political economy of the creative industries, Kääpä argues

that taking the industries to task on their environmental footprint is a multilevel resource and organizational management issue that must be addressed more effectively in contemporary media studies. This book will be of great interest to students and scholars of media, communication and environmental studies.

New Technologies and Environmental Innovation Joseph Huber, 2004-01-01 'Joseph Huber's book contains a wealth of information on technological environmental innovations. The scrutiny of this material leads to powerful conclusions, with which scholars should concern themselves. Highly recommended.' - René Kemp, Maastricht University, The Netherlands 'This timely and impressive volume brings technology back into the centre of discussions and debates on environmental reform. In articulating an ecological modernisation perspective, Joseph Huber presents an inspiring, optimistic and at times provocative assessment of the potential and future role of radical technological innovations in greening production-consumption cycles.' - Arthur P.J. Mol, Wageningen University, The Netherlands In this insightful book, Joseph Huber investigates the life cycle analysis of technological and environmental innovations (TEIs). TEIs are new technologies, products and practices which have benign environmental effects and which can increase eco-efficiency. More importantly, they can also improve 'metabolic consistency', thus laying the foundations for a sustainable industrial ecology.
