**Rosalie Edge, Hawk of Mercy** Dyana Z. Furmansky,2010-09-28 Rosalie Edge (1877-1962) was the first American woman to achieve national renown as a conservationist. Dyana Z. Furmansky draws on Edge's personal papers and on interviews with family members and associates to portray an implacable, indomitable personality whose activism earned her the names "Joan of Arc" and "hellcat." A progressive New York socialite and veteran suffragist, Edge did not join the conservation movement until her early fifties. Nonetheless, her legacy of achievements--called widespread and monumental by the New Yorker--forms a crucial link between the eras defined by John Muir and Rachel Carson. An early voice against the indiscriminate use of toxins and pesticides, Edge reported evidence about the dangers of DDT fourteen years before Carson's Silent Spring was published. Today, Edge is most widely remembered for establishing Hawk Mountain Sanctuary, the world's first refuge for birds of prey. Founded in 1934 and located in eastern Pennsylvania, Hawk Mountain was cited in Silent Spring as an especially significant source of data. In 1930, Edge formed the militant Emergency Conservation Committee, which not only railed against the complacency of the Bureau of Biological Survey, Audubon Society, U.S. Forest Service, and other stewardship organizations but also exposed the complicity of some in the squandering of our natural heritage. Edge played key roles in the establishment of Olympic and Kings Canyon National Parks and the expansion of Yosemite and Sequoia National Parks. Filled with new insights into a tumultuous period in American conservation, this is the life story of an unforgettable individual whose work influenced the first generation of environmentalists, including the founders of the Wilderness Society, Nature Conservancy, and Environmental Defense Fund.

*Gaining the edge in pork and poultry production* J. Taylor-Pickard,P. Spring,2023-08-28 Globally, pork and poultry production has become an extremely competitive industry. There is now more pork consumed in the world than any other meat, yet there is still intense competition for the industry to attract and retain consumers. Consumers continue to demand safe, high quality pork and poultry products at competitive prices compared to other high protein food alternatives. To ensure sustainability of both the pig and poultry industries, producers must endeavour to seek new technologies to improve production efficiency whilst lowering the cost of production and producing a quality product. This edited collection of articles is taken from a series of seminars that brought together some of the world's leading authorities in the field of pig and poultry nutrition and production. The fundamental theme is to re-examine the current trends in productivity within the pig and poultry industries, and to identify nutritional and managerial means to improve competitiveness as well as the quality of the end product. The importance of animal health together with novel strategies for disease control and ways to minimise the environmental impact of pig and poultry production are covered. 'Gaining the edge in pork and poultry production' is aimed at nutritionists and animal producers as well as students and researchers studying animal and applied biological sciences.

*Smart Livestock Nutrition* Ilias Kyriazakis,2023-04-19 This book highlights the latest findings and techniques related to nutrition and feed efficiency

in animal agriculture. It addresses the key challenges facing the nutrition industry to achieve high animal productivity with minimal environmental impact. The concept of smart nutrition involves the use of smart technologies in the feeding and management of livestock. The first chapters focus on advances in biological fields such as molecular agriculture and genotype selection, as well as technologies that enhance or enable the collection of relevant information. The next section highlights applications of smart nutrition in a variety of livestock systems, ranging from intensive indoor housing of broilers and pigs to extensive outdoor housing of cattle and sheep, and marine fish farms. Finally, because of the worldwide attention to this issue, the authors address the environmental consequences. This work, which takes a serious look at how nutrition can be used to improve sustainability in animal agriculture, is a key literature for readers in animal and veterinary sciences, the food industry, sustainability research, and agricultural engineering.
