Interleaving Concepts for Digital-to-Analog Converters Christian Schmidt, 2019-07-19 Modern complementary metal oxide semiconductor (CMOS) digital-to-analog converters (DACs) are limited in their bandwidth due to technological constraints. These limitations can be overcome by parallel DAC architectures, which are called interleaving concepts. Christian Schmidt analyzes the limitations and the potential of two innovative DAC interleaving concepts to provide the basis for a practical implementation: the analog multiplexing DAC (AMUX-DAC) and the frequency interleaving DAC (FI-DAC). He presents analytical and discrete-time models as a theoretical foundation and develops digital signal processing (DSP) algorithms to compensate the analog impairments. Further, he quantifies the impact of various limiting parameters with numerical simulations and verifies both concepts in laboratory experiments. About the Author: Christian Schmidt works at the Fraunhofer Heinrich-Hertz-Institute, Berlin, Germany, on innovative solutions for broadband signal generation in the field of optical communications. The

studies for his dissertation were carried out at the Technische Universität Berlin and at the Fraunhofer Heinrich-Hertz-Institute, both Berlin, Germany.

A wide range of related topics that engineers and managers need to understand are also covered, including broadcast administration, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management. Basic principles and the latest technologies and issues are all addressed by respected professionals with first-hand experience in the broadcast industry and manufacturing. This edition has been fully revised and updated, with 104 chapters and over 2000 pages. The Engineering Handbook provides the single most comprehensive and accessible resource available for engineers and others working in production, postproduction, networks, local stations, equipment manufacturing or any of the associated areas of radio and television.

Structure Discovery in Natural Language Chris Biemann, 2011-12-08 Current language technology is dominated by approaches that either enumerate a large set of rules, or are focused on a large amount of manually labelled data. The creation of both is time-consuming and expensive, which is commonly thought to be the reason why automated natural language understanding has still not made its way into “real-life” applications yet. This book sets an ambitious goal: to shift the development of language processing systems to a much more automated setting than previous works. A new approach is defined: what if computers analysed large samples of language data on their own, identifying structural regularities that perform the necessary abstractions and generalisations in order to better understand language in the process? After defining the framework of Structure Discovery and shedding light on the nature and the graphic structure of natural language data, several procedures are described that do exactly this: let the computer discover structures without supervision in order to boost the performance of language technology applications. Here, multilingual documents are sorted by language, word classes are identified, and semantic ambiguities are discovered and resolved without using a dictionary or other explicit human input. The book concludes with an outlook on the possibilities implied by this paradigm and sets the methods in perspective to human computer interaction. The target audience are academics on all levels (undergraduate and graduate students, lecturers and professors) working in the fields of natural language processing and

computational linguistics, as well as natural language engineers who are seeking to improve their systems.

Remote Sensing in Vessel Detection and Navigation Henning Heiselberg, Andrzej Stateczny, 2020-12-11 The Special Issue entitled "Remote Sensing in Vessel Detection and Navigation" comprises 15 articles on many topics related to remote sensing with navigational sensors. The sequence of articles included in this Special Issue is in line with the latest scientific trends. The latest developments in science, including artificial intelligence, were used. It can be said that navigation and vessel detection remain important and hot topics, and a lot of work will continue to be done worldwide. New techniques and methods for analyzing and extracting information from navigational sensors and data have been proposed and verified. Some of these will spark further research, and some are already mature and can be considered for industrial implementation and development.

Please Allow Me to Introduce Myself: Essays on Debut Albums George

Plasketes,2016-04-22 Debut albums are among the cultural artefacts that capture the popular imagination especially well. As a first impression, the

debut album may take on a mythical status, whether the artist or group achieves enduring success or in rare cases when an initial record turns out to be an apogee for an artist. Whatever the subsequent career trajectory, the debut album is a meaningful text that can be scrutinized for its revelatory signs and the expectations that follow. *Please Allow Me to Introduce Myself: Essays on Debut Albums* tells the stories of 23 debut albums over a nearly fifty year span, ranging from Buddy Holly and the Crickets in 1957 to The Go! Team in 2004. In addition to biographical background and a wealth of historical information about the genesis of the album, each essay looks back at the album and places it within multiple contexts, particularly the artist's career development. In this way, the book will be of as much interest to sociologists and historians as to culture critics and musicologists.

The papers address the emerging topics of theoretical research, empirical studies, and applications of neural information processing techniques across different domains. The 7th and final volume, LNCS 11307, is organized in topical sections on robotics and control; biomedical

applications; and hardware.

Oxwagon Sentinel Christoph Marx, 2009 This new approach to the social history of Afrikaner nationalism looks into the diverse causes for the rise of a political movement which was to shape South African history profoundly during the 20th Century. In the 1930s Afrikaner nationalism transformed itself from a populist into a cultural nationalism, becoming politically radicalised at the same time. The nationalist symbol of the oxwagon was used not only by the National Party, but also by the extra- and antiparliamentarian mass movement Ossewabrandwag, which was founded in 1939. Drawing on a broad range of archival resources the social history of this extremist organisation is analysed, showing local and regional differences. The Ossewabrandwag as a nationalist movement counted a considerable part of the Afrikaans white population among its members. Therefore, the Ossewabrandwag can be understood appropriately only in the context of radical Afrikaner nationalism. Given that the potential for political radicalisation in the white South African population was considerable, ideological influences from overseas played merely an additional role. The book looks into the reasons for the mass participation in the Ossewabrandwag. In addition it analyses the organisation's fight with the National Party and its illegal and treasonable activities. In this context the book discusses which ideological influences on the apartheid policy can be identified as coming from organised right wing extremism.

Ultrafast Magnetism I Jean-Yves Bigot, Wolfgang Hübner, Theo Rasing, Roy Chantrell, 2014-08-05 This volume on Ultrafast Magnetism is a collection of articles presented at the international “Ultrafast Magnetization Conference” held at the Congress Center in Strasbourg, France, from October 28th to November 1st, 2013. This first conference, which is intended to be held every two years, received a wonderful attendance and gathered scientists from 27 countries in the field of Femtomagnetism, encompassing many theoretical and experimental research subjects related to the spins dynamics in bulk or nanostructured materials. The participants appreciated this unique opportunity for discussing new ideas and debating on various physical interpretations of the reported phenomena. The format of a single session with many oral contributions as well as extensive time for poster presentations allowed researchers to have a detailed overview of the field. Importantly, one could sense that, in addition to studying fundamental magnetic phenomena, ultrafast magnetism has entered in a phase where applied physics and engineering are playing an important role. Several devices are being proposed with exciting R&D perspectives in the near future, in particular for magnetic recording, time resolved magnetic imaging and spin polarized transport, therefore establishing connections between various aspects of modern magnetism. Simultaneously, the diversity of techniques and experimental configurations has flourished during the past years, employing in particular Xrays, visible, infra-red and terahertz radiations. It was also

obvious that an important effort is being made for tracking the dynamics of spins and magnetic domains at the nanometer scale, opening the pathway to exciting future developments. The concerted efforts between theoretical and experimental approaches for explaining the dynamical behaviors of angular momentum and energy levels, on different classes of magnetic materials, are worth pointing out. Finally it was unanimously recognized that the quality of the scientific oral and poster presentations contributed to bring the conference to a very high international standard.

Buffalo Bill from Prairie to Palace John M. Burke, 2012-10-01 Advance man, press agent, and publicist extraordinaire, John M. Burke (1842–1917) was instrumental in turning William F. Cody into the iconic persona of Buffalo

Bill. And with this biography, published in 1893, Burke put the finishing touches on the legend that persists to this day. This new, definitive edition includes the full text and all the photographs and line drawings of Burke's original, while providing critical background details on the literary sources, historical characters, and events that figure in the work. With "a few plain truths, unadorned," Burke purported to give a frank account of Buffalo Bill's life. Hostile Indians, gunfights, cattle stampedes: Cody's Wild West was fraught with peril at every turn. This "Chevalier Bayard of American Bordermen" exemplified courage and daring while often narrowly escaping certain death and he earned the respect and admiration of not only his fellow frontiersmen but also European royalty. Burke recounts Cody's duel with Chief Yellow Hand; his role as army scout, buffalo hunter, Pony Express rider, and international celebrity; and his associations with well-known figures like Kit Carson, Sitting Bull, General Phil Sheridan, and Queen Victoria. A brilliant instance of mythmaking by a true believer, Burke's portrait of Buffalo Bill Cody as frontiersman and hero is a tribute to the romance of the Wild West and a canonical volume in the American story.

ANIMAL BIOTECHNOLOGY P. Ramadass, 2019-06-11 Biotechnology is a highly multidisciplinary subject and has got its foundation in many fields including biology, microbiology, biochemistry, molecular biology, genetics, chemistry and chemical and processing engineering. Application of biotechnology in medicine and agriculture has been a recent phenomenon. Modern

biotechnological processes now encompass a wide range of new products including antibiotics, recombinant and nucleic acid vaccines, monoclonal antibodies, recombinant therapeutic products like recombinant insulin, growth hormones, prolactin and gene therapy, production of transgenic animals and plants and use of embryo biotechnological methods and stem cells to augment animal production and human therapy, respectively. Animal biotechnology is in its infancy and only during the past ten years, much work has been done in animal biotechnology in few isolated laboratories throughout the world. There is an increasing need to train manpower in animal biotechnology. Even though many colleges are offering courses in Biotechnology for the students, there is no single text book available covering all the aspects of animal biotechnology for the students. This book on Animal Biotechnology has been written to meet out the requirements of both undergraduate and postgraduate students on the subject of biotechnology. There are seventeen chapters in this book covering different aspects of animal biotechnology including enzyme technology, gene therapy, biotechnology in medicine, Intellectual Property Rights and biosafety in biotechnology. Many up-to-date references on most of the topics have been included so that it would be a reference book for postgraduate students studying biotechnology and molecular biology. This would be a useful book for students who are writing competitive examinations for fellowship. With my extensive experience in teaching and research in Animal Biotechnology I have compiled this book to provide students the basic

principles of animal biotechnology, current information on different topics of biotechnology, as well as information on Intellectual Property Rights and biosafety guidelines to be adopted in the laboratories.
