Korean Grammar Mira Kim,J. R. Martin,Gi-Hyun Shin,Gyung Hee Choi,2023-03-31 Using the framework of Systemic Functional Linguistics (SFL), this pioneering book provides the first comprehensive account of Korean grammar, building foundations for an engagement with Korean texts across a range of spoken and written registers and genres. It treats grammar as a meaning-making resource, comprising experiential resources for construing reality, interpersonal resources for enacting social relations, textual resources for composing coherent discourse, and logical resources for linking clauses. It deals not only with clause systems and structures but also focuses on their realisation as groups and phrases (and clause rank particles), and the realisation of these groups and phrases in words (including clitics and relevant suffixation). Its concluding chapter demonstrates how this grammar can be applied – for teaching Korean as a foreign language and for translation and interpreting studies. This book is essential reading for scholars and students of Asian languages and linguistics and functional approaches to grammar description.

Cyborg Babies Robbie Davis-Floyd,Joseph Dumit,2013-08-21 From fetuses scanned ultrasonically to computer hackers in daycare, contemporary children are increasingly rendered cyborg by their immersion in technoculture. As we are faced with reproductive choices connected directly with technologies, we often have trouble gaining perspective on our own cultural co-dependency with these very same technologies. Our notions of fetal health, maternal risk and child IQ are inseparable from them. Cyborg Babies tracks the process of reproducing children in symbiosis with pervasive technology and offers a range of perspectives, from resistance to ethnographic analysis to science

fiction. Cultural anthropologists and social critics offer cutting-edge ethnographies, critiques, and personal narratives of cyborg conceptions (sperm banks, IVF, surrogacy) and prenatal (mis)diagnosis (DES, ultrasound, amniocentesis); the technological de- and reconstruction of birth in the hospital (electronic fetal monitors, epidurals); and the effects of computer simulation games and cyborg toys and stories on children's emergent consciousness. Contributors include Janet Isaacs Ashford, Elizabeth Cartwright, David Chamberlain, Jennifer Croissant, Charis M. Cussins, Robbie Davis-Floyd, Joseph Dumit, Eugenia Georges, Anne Hill, Mizuko Ito, Emily Martin, Steven Daniel Mentor, Janneli F. Miller, Lisa Mitchell, Lisa Jean Moore, Rayna Rapp, Matthew A. Schmidt, Sylvia Sensiper, Elizabeth Roberts and Sherry Turkle. Examining the increasing cyborgification of the American child, from conception through birth and beyond, *Cyborg Babies* considers its implications for human cultural and psychological evolution.
