Computers in Railways XVI G. Passerini,J. M. Mera,N. Tomii,P. Tzieropoulos,2018-11-05 Forming the 16th volume from this successful series, this book contains papers from the 16th International Conference on Railway Engineering Design and Operation. The included papers are a collection of works from researchers, academics and practitioners involved in railway engineering. There is a continuing need to update the use of advanced systems, promoting their general awareness throughout the management, design, manufacture and operation of railways and other emerging passenger, freight and transit systems. By emphasising the use of computer systems in advanced railway engineering, this book contributes to this goal. These research studies will be of interest to all those involved in the development of railways, including managers, consultants, railway engineers, designers of advanced train control systems and computer specialists.

JAPAN - EISENBAHNATLAS John Yonge,1975-01-01

Germany's Railways Keith Fender,2022-06-30 Germany, divided after World War II into two separate countries, was reunified on October 3, 1990. For the country's rail system, the complex task of unifying two networks with very different rolling stock and systems had just begun. New lines and stations were built to physically unite the network and new trains were introduced to transform services. Many rural regional lines closed as car ownership in the former East Germany increased dramatically. Amazingly, however, none of the former East German narrow-gauge lines that were still steam-operated in 1990 have shut; most still offer daily services while other long-closed narrow-gauge lines have been rebuilt and reopened by enthusiast groups. This book, written by the Modern Railways magazine's Europe Editor and illustrated with over 130 pictures, most of which have never been published before, traces the development of the unified German rail network and new national operator Deutsche Bahn (DB AG). It also looks at the wider rail industry in Germany and the introduction of market reforms leading to one of the most dynamic rail markets anywhere, with over 300 rail freight operators, open access intercity competition and more than 100 regional passenger concession contracts replacing the original two state railway companies. Looking to the future, the book examines plans for new high-speed lines and a national regular-interval timetable from 2030.
