Recording Science in the Digital Era Cerys Willoughby, 2019-07-15 For most of the history of scientific endeavour, science has been recorded on paper. In this digital era, however, there is increasing pressure to abandon paper in favour of digital tools. Despite the benefits, there are barriers to the adoption of such tools, not least their usability. As the relentless development of technology changes the way we work, we need to ensure that the design of technology not only overcomes these barriers, but facilitates us as scientists and supports better practice within science. This book examines the importance of record-keeping in science, current record-keeping practices, and the role of technology for enabling the effective capture, reuse, sharing, and preservation of scientific data. Covering the essential areas of electronic laboratory notebooks (ELNs) and digital tools for recording scientific data, including an overview of the current data management technology available and the benefits and pitfalls of using these technologies, this book is a useful tool for those interested in implementing digital data solutions within their research groups or departments. This book also provides insight into important factors to consider in the design of digital tools such as ELNs for those interested in producing their own tools. Finally, it looks at the role of current technology and then considers how that technology might develop in the future to better support scientists in their work, and in capturing and sharing the scientific record.

Writing the Laboratory Notebook Howard M. Kanare, 1985 Describes in general how scientists can use handwritten research notebooks as a tool to record their research in progress, and in particular the legal protocols for industrial scientists to handwrite their research in progress so they can establish priority of invention in case a patent suit arises.

Responsible Conduct of Research Adil E. Shamoo, David B. Resnik, 2009-02-12 Recent scandals and controversies, such as data fabrication in federally funded science, data manipulation and distortion in private industry, and human embryonic stem cell research, illustrate the importance of ethics in science. Responsible Conduct of Research, now in a completely updated second edition, provides an introduction to the social, ethical, and legal issues facing scientists today.

Survey of US Higher Education Faculty 2023, Use of Electronic Lab Notebooks Primary Research Group Inc., 2023-09 This study looks at the incidence and extent of use of electronic lab notebooks by college and university faculty in the USA. In addition, the study looks at how faculty receive training on how to use such systems, pinpointing the percentage that have been trained through their departments, their university research offices, academic library services, the company providing the application, or other sources. The report also looks at the length of time it takes various parties to get up to speed on use of electronic lab notebooks, and at the percentage of users who try to use such applications but quit. The study also presents detailed data on the degree of clarity that survey participants have about how to share data with their electronic lab notebooks, and when data sharing is appropriate, and when it is discouraged or prohibited. The digitization of science, and the emergence of open science, has made the use of electronic lab notebooks, and the training of faculty on such systems, a highly significant and increasingly important scientific and information services question - and this report helps faculty and those servicing faculty in this key area. Just a few of this 99-page report's many findings are that: 14.47% of all faculty have ever used an electronic lab notebook, including 34.29% of all current engineering faculty. Faculty under age 40 have by far the highest quit rates of use of electronic lab notebooks. The most common way of receiving training was through the company providing the application. Faculty at the largest institutions have a much clearer idea of the norms and rules governing data sharing than to those at smaller institutions. This study is based on data from a survey of 731 higher education faculty randomly chosen from a representative sample

of nearly 500 colleges and universities in the USA. Data is broken out by personal variables such as work title, gender, personal income level, academic discipline, age and other variables, as well as institutional indicators such as college or university type or Carnegie class, enrollment size, public or private status and others.
