The Concept Of Spam In Email Communication

Alena Rudnitskaya,2009-08-17 Seminar paper from the year 2006 in the subject English Language and Literature Studies - Linguistics, grade: keine, LMU Munich (Department für Anglistik und Amerikanistik), course: Internet Communication, language: English, abstract: The communication by email has become one of the most important means of communication in cooperate and private. An internet user is constantly confronted by mass

emails containing undesired information. Spam, defined as bulk unsolicited emailing, generally commercial in nature, and predominately fraudulent. Spam causes high charges and damages. Nucleus Research announced that the spam epidemic is costing US businesses \$712 per employee each year in lost worker productivity. As a result, users are spending 16 seconds identifying and deleting each spam e-mail, which translates into an annual cost of \$70 bln to all US businesses. Looking at the total e-mail traffic, Nucleus estimates that at least 90% of e-mail reaching corporate servers is spam. The average user receives 21 spam messages to their inbox each day. (Moskalyuk 2007) Regardless of the inefficient time spent, there are further costs caused by spam, such as (cf Filterpoint 2008):

- Deleted emails remain stored in the trash folder.
- Higher storage costs through higher server expenses.
- Higher bandwidth essential to store the spam mails.
- Time spent by IT staff for anti-spam measures.
- Recovery costs after a virus attack.

Various experts provide a spam calculator that enables to determine the approximate annual costs for an enterprise created by spam. (Gibbs 2003, Commtouch 2007) The calculator introduced by Gibbs differentiates productivity, connectivity, storage and support costs. This Spam Cost Analysis Model can be found in appendix 1 of this work. In this work different types of spam in general and in specific will be pointed out and characterized. Measures against unsolicited emails will be reviewed. First I start with the definition of spam and where it comes from, followed with the spam history. Then I briefly list the most common categories and variants of spam used. The next step will be the revision of a present situation captured by Commtouch and Symantec, as well as statistics on the information learned through spam monitoring during the last few months, with the examples of its usage. I conclude

with an overview of spam solutions offered and point out further research topics in the area.

Dictionary of Digital Pictograms and Glossary for Internet Use and Portable Telephones Marcienne Martin, 2018-07-27 This book explores the new language of the Internet which offers a middle ground between expressiveness and speed. It also reports on innovative lexicographic practices. Internet users want their written communication to be as fast as that present in oral exchanges; they also want to convey feelings and emotions, and for that they use pictographic symbols. This new system proceeds from the same construction that presided over the establishment of hieroglyphs and ideograms, namely the initialization of semantic fields from basic graphs. Is this not a re-appropriation of ancient know-how? In the long run, will this virtual society, composed of a sum of individuals aggregated around playful projects, not be the necessary counter-power to more and more bureaucratic societal systems? Would this system move beyond the virtual to penetrate the real?

In a pioneering step, the collection is exclusively devoted to the English email discourse of Chinese speakers. The studies address innovative topics related to various contexts and relationships, using several different approaches and theories, which taken together shed light on how English serves as a lingua franca in multiple types of global written communication. The research topics presented are organized into four thematic sections, including emails from students to professors, emails from students to the international academic community, emails from peer to peer, and emails at the workplace. This collection of empirical research invites readers to consider the special features of apologies, requests, terms of address, politeness, and discourse organization, and how cultural differences may affect the use or interpretation of each. Throughout the book, readers will also discover how Chinese speakers use special features and strategies to construct their identity, establish relationships, and achieve successful communication in English. This highly informative, thought-provoking book also provides insights on methods for teaching email discourse using English as a lingua franca and suggests directions for future research.
