Striking a Balance ,2004 Recently, the Queensland Police Service adopted encrypted digital radio communication technology to improve coverage and security of information. As a result, the public (including the media) will not have open access to police radio communications. This report discusses police radio systems and the media's role in a democratic state. The recommendations aim to balance considerations of individual privacy, operational security and public safety against transparency and accountability in policing.

Policing and Media Murray Lee, Alyce McGovern, 2013-11-26 This book examines the relationship between police, media and the public and analyses the shifting techniques and technologies through which they communicate. In a critical discussion of contemporary and emerging modes of mediatized police work, Lee and McGovern demonstrate how the police engage with the public through a fluid and quickly expanding assemblage of communications and information technologies. Policing and Media explores the rationalities that are driving police/media relations and asks; how these relationships differ (or not) from the ways they have operated historically; what new technologies are influencing and being deployed by policing organizations and police public relations professionals and why; how operational policing is shaping and being shaped by new technologies of communication; and what forms of resistance are evident to the manufacture of preferred images of police. The authors suggest that new forms of simulated and hyper real policing using platforms such as social media and reality television are increasingly positioning police organisations as media organisations, and in some cases enabling police to bypass the traditional media altogether. The book is informed by empirical research spanning ten years in this field and includes chapters on journalism and police, policing and social media, policing and reality television, and policing resistances. It will be of interest to those researching and teaching in the fields of Criminology, Policing and Media, as well as police and media professionals.

Saragosa, Texas, Tornado May 22, 1987 National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Division of Natural Hazard Mitigation, Committee on Natural Disasters, 1991-02-01 The small community of Saragosa, Texas, was devastated by a violent multiple-vortex tornado on Friday, May 22, 1987. Despite the extensive warning dissemination efforts, which are documented in this book, the overall warning system in Saragosa failed to reach most of the residents in time for them to take effective safety measures. The primary purpose of this book is to combine the information provided by the respondents to a postdisaster survey with the facts surrounding the tornado in order to understand and evaluate the severe weather warning procedures used in Reeves County, Texas, where Saragosa

is located. The evaluation of this survey is intended to determine ways of adjusting existing warning systems and better prepare the citizens, public officials, and news media in Reeves County, as well as in every city, county, and township where severe weather threatens lives and property.
