The Political Economy of Regulation in Turkey Tamer Çetin, Fuat Oğuz, 2011-01-12 The Political Economy of Regulation in Turkey brings together leading international scholars and experts on Turkey and regulatory reform to provide essential information on the recent Turkish experience and its relation to competition policy. After the 1980 liberalization reform, Turkey tried to introduce competition in many industries, but network industries have remained as monopolies. At the end of the 1990s, regulatory reform was initiated and independent regulatory agencies have been established by the government.

Comprehensive discussions of these network industries, in particular airlines, electricity, natural gas, telecommunications and environment regulations, are offered. The contributors inquire how economic theory and historical analyses can enlighten the character of market processes and the role for government action in these industries, and the contributions shed light on the very recent changes in the regulatory structure and important legal cases that shape the future of regulated industries. This book discusses these issues in an international perspective and relates the Turkish experience to other similar countries, such as in Eastern Europe and Central America. This book serves as a useful guide to those who want to understand major changes in Turkey and regulatory reforms in other emerging markets, making it of interest to researchers and PhD students concerned with regulatory economics, the Turkish economy, and economic policy in emerging markets.

Sticky Feet Claire H. Hollweg, Daniel Lederman, Diego Rojas, Elizabeth Ruppert Bulmer, 2014-06-26 The analysis in this report confirms the findings of previous studies that trade liberalization improves aggregate welfare and is in the long run associated with higher employment and wages. The analysis addresses a major gap in the literature, which has heretofore provided limited evidence about the trade-related adjustment costs faced by workers in developing countries and how they are affected by mobility costs. Labor market frictions reduce the potential gains from trade reform. For a tariff reduction in a given sector, the resulting change in relative prices raises real wages in some sectors and reduces them in the liberalized sector. The emerging wage gaps lead to labor reallocation. But workers typically incur costs to change jobs; the higher the mobility costs, the slower the transition to the new labor market steady state. Workers' sticky feet result in foregone welfare gains from trade. This report presents an estimation strategy for capturing mobility costs when only net flows of workers between industries are observed, generating cross-country estimates for 47 developed and developing countries. The basic analytical approach is then refined to take advantage of micro-level data on worker transitions and wages when gross flows can be observed to derive mobility cost estimates that account for sector and formality status. These cost estimates are used to model the dynamic paths of labor reallocation between sectors and in and out of the labor force, the associated wage paths, and the resulting labor adjustment costs. The main findings of the report are that: labor mobility costs in developing countries are high; foregone trade gains due to frictions in labor mobility can also be substantial;

workers bear the brunt of adjustment costs; mobility costs and labor market adjustments to trade-related shocks vary by industry, firm type, and worker type; entry costs are significantly higher for formal than for informal employment; trade reforms increase economy-wide wages and employment; and workers displaced by plant closings are likely to face relatively long adjustment periods. The findings provide insights that could be helpful to policymakers hoping to mitigate negative short-term consequences of trade liberalization and facilitate labor adjustment.

Twisting in the Wind Oksan Bayulgen,2022-09-15 Whereas most scholars study alternative energy policy in developed, Western nations, Oksan Bayulgen wonders why renewable energy has not advanced in countries that do not have deep fossil fuel resources. This book focuses on the political determinants of clean energy transitions, especially in developing country settings, which most of the literature has overlooked. Using an in-depth case study of energy policymaking in Turkey, Bayulgen constructs a dynamic, multidimensional theoretical model to explain the political feasibility of energy solutions to climate change in much of the world. By using Turkey as a case study, she clearly shows the role of the state and elites in energy policies that have failed to make the transition to renewables. This timely topic will be of interest to scholars, policymakers, energy investors, and anyone interested in environmental studies.

The Regulation of Turkish Network Industries Muzaffer Eroğlu, Matthias Finger, 2022-01-01 This book brings together academics and experts on Turkish network industries. It provides fundamental information on the current developments regarding regulation of the different network industries in Turkey. Turkey has gone through a liberalization process in most of the network industries during the past 20 years. In most of them, independent regulatory authorities have been established, but some network industries are still remaining under the central or local government regulatory regime. As a result, there is now a very complicated regulatory regime in place which makes Turkey's regulatory system difficult to understand for practitioners, academics, lawyers, researchers and investors. This book offers unique insight into Turkey's regulatory regime in various network industries. It also offers a historical background to regulation, a description of the current regulatory regimes, as well as an analysis of the foreseeable evolutions. The book covers all the important network industries in Turkey. No similar book is available on the market to date. Moreover, the book provides an extensive analysis of the current regulatory regimes in the energy, the transport, and the telecommunications industries. This book should be of interest to anyone wishing to understand Turkish regulation and will be very helpful handbook to researchers who are interested in regulation of network industries not only in Turkey but also in other developing countries, as Turkey is quite representative of other emerging countries. Readers will acquire a thorough understanding of the state of play of the Turkish network industries and their regulation.

Textbook of Acute Trauma Care Peter Lax, 2022-01-05 This book provides a systemic approach to acute trauma care in line with the ABCDE paradigm and up-to-date information on

assessing and managing major trauma from the pre-hospital to the rehabilitation phase. The book's early sections are dedicated to identifying and managing pathology caused by massive haemorrhage, airway, breathing, circulation or neurological trauma and examining the current evidence base relating to their management. The book then builds from fundamental skills to advanced interventions so that each level of responder can identify and implement aspects of clinical practice that will be of benefit to them at their stage. This approach also explains advanced interventions that may be executed subsequently, explaining how each phase of care sits together. This has a further benefit of producing seamless care for patients by practitioners of different levels using this book as a reference point. Later sections deal with specifics of in-hospital trauma care by speciality, including the explanation of decision making processes by specialities, use of diagnostic and interventional radiology, rehabilitation and psychological aspects of trauma care. The Textbook of Acute Trauma Care also focuses on non-clinical issues relevant to trauma such as training and logistics of retrieval and repatriation, aviation considerations in HEMS, legal and forensic evidence considerations and ethical issues dealing with trauma patients. In addition, the book contains chapters from international experts on cognitive and human factors relating to healthcare and suggests strategies for training and minimising errors. This book is an essential resource for all grades of practitioner, from first responders to Consultant/Attending Physician level providers.
