Video Encoding by the Numbers Jan Lee Ozer, 2016-12-28 Video Encoding by the Numbers helps readers optimize the quality and efficiency of their streaming video by objectively detailing the impact of critical configuration options with industry-standard quality metrics like PSNR and SSIMplus. This takes the guesswork out of most encoding decisions and allows readers to achieve the optimal quality/data rate tradeoff. In addition, readers learn how to use tools like the Moscow University Video Quality Measurement tool, SSIMWave Quality of Experience Monitor, and FFmpeg to perform similar quality tests on their own videos. Because all videos encode differently, the tests detailed in the book involve eight different videos, including movie footage, animations, talking head footage, a music video, and Powerpoint and Camtasia-based videos. Readers first learn how to determine the ideal data rate for their videos at different resolutions. Then the book covers configuration options like bitrate control (CBR, VBR) that impacts quality and deliverability, and I-Frame, B-Frame, and reference frame decisions that impact quality and encoding time. The next three chapters focus on codec-specific configurations like Profile and preset for H.264 and HEVC, and the various configuration options available for Google's VP9. Next the book details how to choose an adaptive bitrate (ABR) technology, how to create an encoding ladder, and the most efficient ways to encode and package video into different ABR formats. Working off the groundbreaking work by Netflix and YouTube, the final chapter teaches the reader how to use per-title encoding with their own videos to create the ideal encoding ladder for each video in their library. Each chapter concludes with a section detailing how to configure the options discussed with FFmpeg, a preferred tool for high-volume video producers, including packaging into HLS and DASH formats (the latter with MP4Box). Overall readers learn how to optimally configure their encoding ladders and how to produce their videos with FFmpeg.

Telecom Extreme Transformation Kaveh Hushyar,Harald Braun,Hossein Eslambolchi,2021-07-28

The extreme transformation from a traditional Communication Service Provider (CSP) to a Digital Service Provider (DSP) status is covered in this book, specifically: Redefinition of the offerings of connectivity services to digital services; unification of legacy redundant networks into one; Redefinition of the measurements to customer-centric QoE for all digital and connectivity services; the Best-in-Industry processes and practices to ensure a sustainable network performance at a competitively operational efficiency; a Service-over-IP (SolP) platform to enable the introduction of unified new services with a time-to-market urgency; the regulatory arrangement for content purification, to liberalize CSPs to become DSPs; an architecture for data mining and analytics; and a migration plan from a CSP to a DSP status. The book is recommended for telecom and digital service professionals planning to embark on transformational projects; telecom and technology equipment manufacturers to help with product development for a DSP status; institutional investors to evaluate and establish their investment decisions; telecom management consultants to help with a solid benchmark for transformation engagement; university students, majoring in telecommunication and technology products as a guide for career planning.

Logic for Programming, Artificial Intelligence, and Reasoning Christian G. Fermüller,Andrei Voronkov,2010-09-27 This book constitutes the refereed proceedings of the 17th International Conference on Logic for Programming, Artificial Intelligence, and Reasoning, LPAR-17, held in Yogyakarta, Indonesia, in October 2010. The 41 revised full papers presented were carefully reviewed and selected from 133 submissions.

Cloud Computing Bible Barrie Sosinsky, 2010-12-10 The complete reference guide to the hot technology of cloud computing Its potential for lowering IT costs makes cloud computing a major force for both IT vendors and users; it is expected to gain momentum rapidly with the launch of Office Web Apps later this year. Because cloud computing involves various technologies, protocols, platforms, and infrastructure elements, this comprehensive reference is just what you need if you'll be using or implementing cloud computing. Cloud computing offers significant cost savings by eliminating upfront expenses for hardware and software; its growing popularity is expected to skyrocket when Microsoft introduces Office Web Apps This comprehensive guide helps define what cloud computing is and thoroughly explores the technologies, protocols, platforms and infrastructure that make it so desirable Covers mobile cloud computing, a significant area due to ever-increasing cell phone and smartphone use Focuses on the platforms and technologies essential to cloud computing Anyone involved with planning, implementing, using, or maintaining a cloud computing project will rely on the information in *Cloud Computing Bible*.

Algebraic Structures in Natural Language Shalom Lappin, Jean-Philippe Bernardy, 2022-12-23

Algebraic Structures in Natural Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language. Until recently algebraic systems have dominated the study of natural language in formal and computational linguistics, AI, and the psychology of language, with linguistic knowledge seen as encoded in formal grammars, model theories, proof theories and other rule-driven devices. Recent work on deep learning has produced an increasingly powerful set of general learning mechanisms which do not apply rule-based algebraic models of representation. The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation. Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods, social interaction and information theory, rather than on formal models of grammar induction. This book addresses the learning procedures through which humans acquire natural language, and the way in which they represent its properties. It brings together leading researchers from computational linguistics, psychology, behavioral science and mathematical linguistics to consider the significance of non-algebraic methods for the study of natural language. The text represents a wide spectrum of views, from the claim that algebraic systems are largely irrelevant to the contrary position that non-algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input. There are interesting and important perspectives that fall at intermediate points between these opposing approaches, and they may combine elements of both. It will appeal to researchers and advanced students in each of

these fields, as well as to anyone who wants to learn more about the relationship between computational models and natural language.

Cloud Computing and Big Data Marcelo Naiouf, Franco Chichizola, Enzo Rucci, 2019-07-26 This book constitutes the revised selected papers of the 7th International Conference on Cloud Computing and Big Data, JCC&BD 2019, held in La Plata, Buenos Aires, Argentina, in June 2019. The 12 full papers presented were carefully reviewed and selected from a total of 31 submissions. They are dealing with such topics as cloud computing and HPC; Big Data and data intelligence; mobile computing.

Federal Register ,1999-12

A Copyright Gambit Sunimal Mendis, 2019-07-05 European memory institutions are repositories of a wealth of rare documents that record public domain content. These documents are often stored in 'dark-archives' to which members of the public are granted limited access, resulting in the public domain content recorded therein being relegated to a form of 'forgotten-knowledge'. Digitisation offers a means by which such public domain content can be made speedily and easily accessible to users around the world. For this reason, it has been hailed as the harbinger of a new 'digital renaissance'. This book examines the topical issue of the need to preserve exclusivity over digitised versions of rare documents recording public domain content. Based on data gathered through an empirical survey of digitisation projects undertaken by fourteen memory institutions in five European Union Member States, it argues for the introduction of exclusive rights in digitised versions of rare documents recording public domain textual content as a means of incentivising private-sector investment in the digitisation process. It concludes by presenting a detailed proposal for a European Union Regulation that would grant memory institutions a limited-term related right in digitised versions of rare documents held in their collections subject to stringent exceptions and limitations

that are designed to safeguard user interests.

Closed Object Boundaries from Scattered Points Remco Veltkamp, 1994-11-30 This monograph is devoted to computational morphology, particularly to the construction of a two-dimensional or a three-dimensional closed object boundary through a set of points in arbitrary position. By applying techniques from computational geometry and CAGD, new results are developed in four stages of the construction process: (a) the gamma-neighborhood graph for describing the structure of a set of points; (b) an algorithm for constructing a polygonal or polyhedral boundary (based on (a)); (c) the flintstone scheme as a hierarchy for polygonal and polyhedral approximation and localization; (d) and a Bezier-triangle based scheme for the construction of a smooth piecewise cubic boundary.

SOS to Encode! Part 1: An Intensive, Multisensory Reading, Spelling, & Writing Program Josh Morgan, 2017-07-11 The SOS to Encode! Series provides a much-needed resource in the Elementary classroom. The SOS to Encode! Series presents a skills-based approach to improve student phonics skills, decoding, encoding, syllable segmentation, syllable blending, sentence editing, capitalization, and many other skills. This program allows three levels of instructional intensity and duration to allow teachers to customize instruction for each class, group, or student. Based on placement test recommendations, the teacher implements one of three plans: Plan A: the full encoding program (6-7 weeks), Plan B: the full phonics review (3-4 weeks), or Place C: strengthen sentence mechanics and editing skills (2 weeks). Following the completion of the program, students are assessed again to determine if they move to the next part in the series or need to repeat one of the plans for Part 1. The customization, formative assessment, and multisensory approach allow students to master needed encoding skills quickly in order to move on to higher-level literacy skills. SOS to Encode! uses the Simultaneous Oral Spelling strategy along with Multisensory phonics and encoding techniques, Developmentally scaffolded lessons, Instructional framework (Scope and Sequence) and a consistent lesson structure. By the end of the Part 1 of SOS to Encode!, students will be able to encode, decode, and spell CVC words, closed syllables containing consonant digraphs, edit writing, and self-regulate mechanics during authentic writing experiences.
