High-Performance Modelling and Simulation for Big Data Applications Joanna Kołodziej, Horacio González-Vélez, 2019-03-25 This open access book was prepared as a Final Publication of the COST Action IC1406 “High-Performance Modelling and Simulation for Big Data Applications (cHiPSet)” project. Long considered important pillars of the scientific method, Modelling and Simulation have evolved from traditional discrete numerical methods to complex data-intensive continuous analytical optimisations. Resolution, scale, and accuracy have become essential to predict and analyse natural and complex systems in science and engineering. When their level of abstraction raises to have a better discernment of the domain at hand, their representation gets increasingly demanding for computational and data resources. On the other hand, High Performance Computing typically entails the effective use of parallel and distributed processing units coupled with efficient storage, communication and visualisation systems to underpin complex data-intensive applications in distinct scientific and technical domains. It is then arguably required to have a seamless interaction of High Performance Computing with Modelling and Simulation in order to store, compute, analyse, and visualise large data sets in science and engineering. Funded by the European Commission, cHiPSet has provided a dynamic trans-European forum for their members and distinguished guests to openly discuss novel perspectives and topics of interests for these two communities. This cHiPSet compendium presents a set of selected case studies related to healthcare, biological data, computational advertising, multimedia, finance, bioinformatics, and telecommunications.

Sensor Technologies Michael J. McGrath, Clodhna Ni Scanail, Dawn Nafus, 2014-01-23 **Sensor Technologies: Healthcare, Wellness and Environmental Applications** explores the key aspects of sensor technologies, covering wired, wireless, and discrete sensors for the specific application domains of healthcare, wellness and environmental sensing. It discusses the social, regulatory, and design considerations specific to these domains. The book provides an application-based approach using real-world examples to illustrate the application of sensor technologies in a practical and experiential manner. The book guides the reader from the formulation of the research question, through the design and validation process, to the deployment and management phase of sensor applications. The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs. "Sensor Technologies: Healthcare, Wellness and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare, wellness, and environmental monitoring. From sensor hardware to system applications and case studies, this book gives readers an in-depth understanding of the technologies and how they can be applied. I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications." Dr. Benny Lo Lecturer, The Hamlyn Centre, Imperial College of London "This timely addition to the literature on sensors covers the broad complexity of sensing, sensor types, and the vast range of existing and emerging applications in a very clearly written and accessible manner. It is particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud-based 'big data' analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present. It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of 'big data' down to the personal level of individual life and health." Dermot Diamond Director, National Centre for Sensor Research, Principal Investigator, CLARITY Centre for Sensor Web Technologies, Dublin City University **Sensor Technologies: Healthcare, Wellness and Environmental Applications** takes the reader on an end-to-end journey of sensor technologies, covering the fundamentals from an engineering perspective, introducing how the data gleaned can be both processed and visualized, in addition to offering exemplar case studies in a number of application domains. It is a must-read for those studying any undergraduate course that involves sensor technologies. It also provides a thorough foundation for those involved in the research and development of applied sensor systems. I highly recommend it to any engineer who wishes to broaden their knowledge in this area! Chris Nugent Professor of Biomedical Engineering, University of Ulster

Between Empowerment and Manipulation Marijn Sax, 2021-09-28 Popular health apps are commercial services. Despite the promise of empowerment they offer, the tensions introduced by their data-driven, dynamically adjustable digital environments engender a potential for manipulation to which their designers and operators can easily succumb. In this important book, the author develops an ethical framework to evaluate the commercial practices of for-profit health apps, proceeding to a detailed proposal of how to legally address the exploitation, for financial gain, of users' need for health. Focusing on the intricate tracking of users over time, coupled with the possibility to personalize the environment based on knowledge gained from tracking, the book's in-depth analysis of popular for-profit health apps engages with such particulars as the following: the strategic framing of health in health apps; the cultural tendency to presume we are unhealthy until we have proven we are healthy; the key concepts of autonomy, vulnerability, trust, and manipulation; how health apps develop ongoing profitable relationships with users; and use of misleading and aggressive commercial practices. The author argues that the European Union's Unfair Commercial Practices Directive, when informed by ethical considerations, offers promising legal solutions to the manipulation concerns raised by popular for-profit health apps. The book will be welcomed not only for its incisive scrutiny of the health app phenomenon but also for the light it sheds on the wider problems inherent in the digital society—what digital environments know about their users, how they use that knowledge, and for which purpose. Its progress from an ethical approach to legal solutions will recommend the book to lawyers concerned with business practices, human resources professionals, policymakers, and academics interested in the intersection of ethics and law.

Soft Computing Applications Valentina Emilia Balas, Lakhmi C. Jain, Branko Kovačević, 2015-11-10 These volumes constitute the Proceedings of the 6th International Workshop on Soft Computing Applications, or SOFA 2014, held on 24-26 July 2014 in Timisoara, Romania. This edition was organized by the University of Belgrade, Serbia in conjunction with Romanian Society of Control Engineering and Technical Informatics (SRAIT) - Arad Section, The General Association of Engineers in Romania - Arad Section, Institute of Computer Science, Iasi Branch of the Romanian Academy and IEEE Romanian Section. The Soft Computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness and low solution cost. Soft computing facilitates the use of fuzzy logic, neurocomputing, evolutionary computing and probabilistic computing in combination, leading to the concept of hybrid intelligent systems. The combination of such intelligent systems tools and a large number of applications introduce a need for a synergy of scientific and technological disciplines in order to show the great potential of Soft Computing in all domains. The conference papers included in these proceedings, published post conference, were grouped into the following area of research: · Image, Text and Signal Processing · Intelligent Transportation Modeling and Applications Biomedical Applications Neural Network and Applications Knowledge-Based Technologies for Web Applications, Cloud Computing, Security, Algorithms and Computer Networks Knowledge-Based Technologies Soft Computing Techniques for Time Series Analysis Soft Computing

and Fuzzy Logic in Biometrics Fuzzy Applications Theory and Fuzzy Control Bussiness Process Management Methods and Applications in Electrical Engineering The volumes provide useful information to professors, researchers and graduated students in area of soft computing techniques and applications, as they report new research work on challenging issues.

Personal Autonomy in Society Marina Oshana, 2016-12-05 People are socially situated amid complex relations with other people and are bound by interpersonal frameworks having significant influence upon their lives. These facts have implications for their autonomy. Challenging many of the currently accepted conceptions of autonomy and of how autonomy is valued, Oshana develops a 'social-relational' account of autonomy, or self-governance, as a condition of persons that is largely constituted by a person's relations with other people and by the absence of certain social relations. She denies that command over one's motives and the freedom to realize one's will are sufficient to secure the kind of command over one's life that autonomy requires, and argues against psychological, procedural, and content neutral accounts of autonomy. Oshana embraces the idea that her account is 'perfectionist' in a sense, and argues that ultimately our commitment to autonomy is defeasible, but she maintains that a social-relational account best captures what we value about autonomy and best serves the various ends for which the concept of autonomy is employed.

Mobile e-Health Hannah R. Marston, Shannon Freeman, Charles Musselwhite, 2018-09-05 This multi-disciplinary collection of essays captures discussion, thinking and research surrounding the recent surge of interest in how technology can help us as we age. A wide range of topics are covered, from investigations in the use of technology to improve health and well-being, to examinations of digital gaming, mobile health apps and the quantified self in relation to an ageing population. From multi-disciplinary perspectives, this collection highlights the role of a more social approach to technology. As such, a variety of social research methods are used throughout the chapters. The benefits and issues with different approaches are highlighted both in terms of further research, but also so the reader can judge the value of the research for themselves. This collection brings together the latest thinking and cutting edge contemporary research from leading thinkers and academics in the field of human computer interaction, health and gerontology. In taking a social approach, it highlights how technological practices fit within wider gerontological, political and cultural perspectives. It therefore has potential to influence those working in human computer interaction, digital humanities, sociology, psychology and gerontology. It can help change the practice of people working in the health and social care field, in computer and product design, and in the digital and creative industries.
