**Power Trip** Michael E. Webber,2019-05-07 A global tour of energy--the builder of human civilization and also its greatest threat. Energy is humanity's single most important resource. In fact, as energy expert Michael E. Webber argues in *Power Trip*, the story of how societies rise can be told largely as the story of how they manage energy sources through time. In 2019, as we face down growing demand for and accumulating environmental impacts from energy, we are at a crossroads and the stakes are high. But history shows us that energy's great value is that it allows societies to reinvent themselves. *Power Trip* explores how energy has transformed societies of the past and offers wisdom for today's looming energy crisis. There is no magic bullet; energy advances always come with costs. Scientific innovation needs public support. Energy initiatives need to be tailored to individual societies. We must look for long-term solutions. Our current energy crisis is real, but it is solvable. We have the power.

*The WPA Guide to Wyoming* Federal Writers' Project,2013-10-31 During the 1930s in the United States, the Works Progress Administration developed the Federal Writers' Project to support writers and artists while making a national effort to document the country's shared history and culture. The American Guide series consists of individual guides to each of the states. Little-known authors—many of whom would later become celebrated literary figures—were commissioned to write these important books. John Steinbeck, Saul Bellow, Zora Neale Hurston, and Ralph Ellison are among the more than 6,000 writers, editors, historians, and researchers who documented this celebration of local histories. Photographs, drawings, driving tours, detailed descriptions of towns, and rich cultural details exhibit each state's unique flavor. Published in 1941, on the fiftieth anniversary of the state, the WPA Guide to Wyoming is a thorough reflection of both the history of the state's pioneer routes as well an attempt to capture the beauty of the surrounding area in photographs. Descriptions of the Equality State's livestock and oil industries are included as well as pictorial documentation of the area's vast expanses of open land.

***Electric and Hybrid Buses for Urban Transport*** Bogdan Ovidiu Varga, Calin Iclodean, Florin Mariasiu, 2016-08-16 This book provides a systematic assessment of the performance of electric and hybrid buses in urban areas on a daily basis and presents a complete set of technical scenarios to promote their efficient exploitation. It will also help readers understand how future buses will perform on specific roads and how the latest technologies can be integrated into existing fleets by proposing a methodology for evaluating the energy consumption for general and specific routes and scenarios. Covering all aspects relating to the daily use of electric and hybrid buses, including maintenance strategies, power train configuration, battery replacements, route evaluation, and charging speed, emphasis is placed on energy efficiency and effective implementation. Addressing key developments in intelligent vehicle technologies, the book presents innovative transportation technologies and a broad range of topics in transportation-related sustainability research, from vehicle systems and design, to mass transit systems.

***Rural Energy Development in China*** Robert P. Taylor, 2016-03-17 In this title, originally published in 1981, author Robert P. Taylor calls for a greater understanding of rural energy supply and consumption patterns in the developing countries. Here, Taylor specifically examines the rural energy development in China as it is the world's largest developing country in terms of population, and it has encountered many of the rural energy problems common in other developing countries. This study provides an analysis of China's rural energy economy from before 1949 to a general discussion of achievements in rural energy development and the rural energy economy in 1981. This is an ideal title for students interested in environmental studies and development studies.

***An Assessment of the Prospects for Inertial Fusion Energy*** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Board on Physics and Astronomy, Committee on the Prospects for Inertial Confinement Fusion Energy Systems, 2013-07-05 The potential for using fusion energy to produce commercial electric power was first explored in the 1950s. Harnessing fusion energy offers the prospect of a nearly carbon-free energy source with a virtually unlimited supply of fuel. Unlike nuclear fission plants, appropriately designed fusion power plants would not produce the large amounts of high-level nuclear waste that requires long-term disposal. Due to these prospects, many nations have initiated research and development (R&D) programs aimed at developing fusion as an energy source. Two R&D approaches are being explored: magnetic fusion energy (MFE) and inertial fusion energy (IFE). *An Assessment of the Prospects for Inertial Fusion Energy* describes and assesses the current status of IFE research in the United States; compares the various technical approaches to IFE; and identifies the scientific and engineering challenges associated with developing inertial confinement fusion (ICF) in particular as an energy source. It also provides guidance on an R&D roadmap at the conceptual level for a national program focusing on the design and construction of an inertial fusion energy demonstration plant.

***The State of American Hot Rodding*** David Lawrence Miller, 2018-04-04 As the automotive world looks towards a future of

electric vehicles, driverless technology and anonymous styling, what can be learned from the individuals who resist these trends and cling to their love of street rods and muscle cars? The hot rodding world still exists, but will it continue to hold a place in tomorrow's automotive culture? Gearhead and geographer David Miller has crisscrossed America in his custom built 1958 Chevy Apache pickup, interviewing hot rodders about what drives their passions, values and way of life. Their collected stories present a detailed portrait of modern hot rodding—a distinctly American subculture that survives by bucking the trends and attitudes that increasingly shape the transportation landscape.
