Energy Support for Firms in Europe: Best Practice Considerations and Recent Experience Mr.

Anil Ari,Philipp Engler,Gloria Li,Manasa Patnam,Ms. Laura Valderrama,2023-09-22 The surge in energy prices due to Russia's February 2022 invasion of Ukraine significantly increased costs for European firms, prompting governments to introduce a range of support schemes. Although energy prices had eased by early 2023, uncertainty around prices remains unusually large. Against this backdrop, this paper examines the case for government intervention and identifies best practices with a view to improving the design of existing energy support schemes, facilitating exit from those schemes, and preparing policymakers for a downside scenario in which energy prices flare up again. The paper argues that support should be limited in size, strictly temporary in nature, narrowly targeted, and accompanied by strong safeguards and conditionality, while preserving price signals as much as possible to encourage energy conservation. Finally, the paper reviews recent support schemes introduced by European governments in light of the identified best practice considerations.

Reinventing Fire Amory Lovins,2011-10-15 Imagine fuel without fear. No climate change. No oil

spills, no dead coalminers, no dirty air, no devastated lands, no lost wildlife. No energy poverty. No oil-fed wars, tyrannies, or terrorists. No leaking nuclear wastes or spreading nuclear weapons. Nothing to run out. Nothing to cut off. Nothing to worry about. Just energy abundance, benign and affordable, for all, forever. That richer, fairer, cooler, safer world is possible, practical, even profitable-because saving and replacing fossil fuels now works better and costs no more than buying and burning them. Reinventing Fire shows how business-motivated by profit, supported by civil society, sped by smart policy-can get the US completely off oil and coal by 2050, and later beyond natural gas as well. Authored by a world leader on energy and innovation, the book maps a robust path for integrating real, here-and-now, comprehensive energy solutions in four industries-transportation, buildings, electricity, and manufacturing-melding radically efficient energy use with reliable, secure, renewable energy supplies. Popular in tone and rooted in applied hope, Reinventing Fire shows how smart businesses are creating a potent, global, market-driven, and explosively growing movement to defossilize fuels. It points readers to trillions in savings over the next 40 years, and trillions more in new business opportunities. Whether you care most about national security, or jobs and competitive advantage, or climate and environment, this major contribution by world leaders in energy innovation offers startling innovations will support your values, inspire your support, and transform your sense of

possibility. Pragmatic citizens today are more interested in outcomes than motives. Reinventing Fire answers this trans-ideological call. Whether you care most about national security, or jobs and competitive advantage, or climate and environment, its startling innovations will support your values, inspire your support, and transform your sense of possibility.

"Clean" Energy Exploitations Ronald Stein, Todd Royal, 2021-06-04 The global focus on reducing emissions must be ethical instead of supporting environmental degradation. The book Clean Energy Exploitations – Helping citizens understand the environmental and humanity abuses that support 'clean' energy" is a Nominee for the 2022 Pulitzer Prize competition in the General Nonfiction category. Pulitzer Prize Winners and Finalists will be announced in April 2022. They also emphasize the global nature of the problem, noting that the United States of America could cease to exist and we'd see environmental problems get worse. In this book, they answer questions such as: Would the Green New Deal cut worldwide emissions? What toll is energy racism and inequality taking on the world? How effective are renewable forms of energy in meeting our needs? Whose duty is it to reduce harmful pollution? Green advocates often say they support sustainable and ethical coffee, sneakers, handbags, and

diamonds-and they claim they won't tolerate unsafe conditions. But when it comes to green energy and battery energy storage systems for electrical grids and electric vehicles, the authors say it is a different story.

Powering the Green Economy Miguel

Mendonca,2009-12 Effective policy is vital for creating greener economies, new jobs and industries, for securing energy supplies and for protecting the climate and environment. As renewable energy is fundamental to achieving all of these objectives, it too needs the best possible policy to drive it. Feed-in tariffs have proven to deliver the fastest, most cost-effective and inclusive deployment, by allowing anyone to sell renewable energy into the grid and get a long term, guaranteed return for it. This book, from authors who have spent years working on feed-in tariff design and advocacy, provides a broad and detailed resource on feed-in tariffs and other renewable energy support schemes. It shares many lessons on good and bad design and implementation, as well as discussing the challenges faced by policy, and renewable energy in general. Powering the Green Economy: - Situates renewable energy and feed-in tariffs within the context of the global moves towards a green economy - Provides an introduction to feed-in tariffs and brings developments in key countries around the world up to date - Investigates effective design for developed and emerging economies - Explores technical, social and political issues - Analyses

other support schemes - Describes the barriers to renewable energy - Presents a blueprint for campaigning successfully for feed-in tariffs
Written in a clear, practical style, this is a must-read for policymakers, businesses, investors, campaigners, academics, community groups and anyone concerned with creating successful and sustainable energy policy.

Efficient Use and Conservation of Energy - Volume II Clark W. Gellings,2009-06-10 Efficient Use and Conservation of Energy is a component of Encyclopedia of Energy Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty Encyclopedias. The Theme on Efficient Use and Conservation Of Energy discusses matters of great relevance to our world such as: Efficient Use and Conservation of Energy in the Industrial Sector; Efficient Use and Conservation of Energy in Buildings; Efficient Use and Conservation of Energy in the Transportation Sector; Efficient Use and Conservation of Energy in the Agricultural Sector; Using Demand-Side Management to Select Energy Efficient Technologies and Programs . These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

Energy Master Planning toward Net Zero Energy Resilient Public Communities Guide Alexander Zhivov, 2022-06-13 Best practices from around the world have proven that holistic Energy Master Planning can be the key to identifying cost-effective solutions for energy systems that depend on climate zone, density of energy users, and local resources. Energy Master Planning can be applied to various scales of communities, e.g., to a group of buildings, a campus, a city, a region, or even an entire nation. Although the integration of the energy master planning into the community master planning process may be a challenging task, it also provides significant opportunities to support energy efficiency and community resilience by increasing budgets for investments derived from energy savings, by providing more resilient and cost-effective systems, by increasing comfort and quality of life, and by stimulating local production, which boosts local economies. The Guide is designed to provide a valuable information resource for those involved in community planning: energy systems engineers, architects, energy managers, and building operators. Specifically, this Guide was developed

to support the application of the Energy Master Planning process through the lens of best practices and lessons learned from case studies from around the globe. The Guide introduces concepts and metrics for energy system resilience methodologies, and discusses business and financial models for Energy Master Plans implementation. This information can help planners to establish objectives and constraints for energy planning and to select and apply available technologies and energy system architectures applicable to their diverse local energy supply and demand situations. This Guide is a result of research conducted under the International Energy Agency (IEA) Energy in Buildings and Communities (EBC) Program Annex 73 and the US Department of Defense Environmental Security Technology Certification Program (ESTCP) project EW18-5281 to support the planning of Low Energy Resilient Public Communities process that is easy to understand and execute.

Energy Options Impact on Regional Security Frano Barbir, Sergio Ulgiati, 2010-09-23 Energy appears to be a fundamental driving force of economic and political strategies as well as planetary stability. Energy-related issues such as (1) the availability of new energy sources and viable technologies, (2) the disparity in access to

energy sources, (3) the role of energy in our societies (energy societal metabolism), (4) the energy support to the life of our cities (where about half of world population is going to live very soon), and (5) the energy demand for food security all over the world, are “hot” problems that humans will have to face within the framework of sustainability (ecologically sound production and consumption patterns associated with socially acceptable life styles), in terms of policies, technological development and economic processes. A coherent energy strategy is required, addressing both energy supply and demand, security of access, development problems, equity, market dynamics, by also taking into account the whole energy lifecycle including fuel production, transmission and distribution, energy conversion, and the impact on energy equipment manufacturers and the end-users of energy systems. Issues of energy efficiency and rebound effect must also be taken into proper account. In the short term, the aim should be to achieve higher energy efficiencies and increased supply from local energy sources, in particular renewable energy sources.
